

Contents

Introduction	v
Introduction to molecular modelling <i>Dr. Annaliese Palmer</i>	1
Combinatorial technologies: chemical and biological approaches for the generation of peptide libraries <i>Dr. Giorgio Fassina</i>	15
Selected topics in molecular simulations: construction of the force fields, quantum simulations and free energy calculations <i>Dr. Janez Mavri</i>	25
A computational method used in 3D-QSAR: Comparative Molecular Field Analysis (CoMFA) <i>Dr. Susanna Monti</i>	35
Some molecular docking approaches <i>Dr. Susanna Monti</i>	41
Three dimensional models for new proteins <i>Dr. Susanna Monti</i>	49
Molecular bioavailability predictions in structure-based drug design <i>Dr. Vladimir Frečer</i>	55
X-ray crystallography <i>Dr. Chen Wei</i>	73
Applications of structure-based molecular design in the pharmaceutical industry: design of inhibitors of HIV-1 aspartic protease <i>Professor Miertuš</i>	77
Prediction and visualization of chemical properties and reactivity <i>Dr. David Gallagher</i>	91
Prediction of properties by QSPR and QSAR <i>Dr. David Gallagher</i>	137
