

CONTENTS

Preface	vii
Acknowledgments	ix
Notation	xix

Chapter 1 Temperature

1-1	Macroscopic Point of View	1
1-2	Microscopic Point of View	2
1-3	Macroscopic vs. Microscopic	2
1-4	Scope of Thermodynamics	3
1-5	Thermal Equilibrium	4
1-6	Temperature Concept	6
1-7	Measurement of Temperature	9
1-8	Comparison of Thermometers	12
1-9	Gas Thermometer	14
1-10	Ideal-gas Temperature	17
1-11	Celsius Temperature Scale	19
1-12	Electric Resistance Thermometry	21
1-13	Thermocouple	22
1-14	International Practical Temperature Scale	23

Chapter 2 Simple Thermodynamic Systems

2-1	Thermodynamic Equilibrium	26
2-2	PV Diagram for a Pure Substance	29
2-3	$P\theta$ Diagram for a Pure Substance	31

xii Contents

2-4	<i>PV</i> Surface	33
2-5	Equations of State	34
2-6	Differential Changes of State	36
2-7	Mathematical Theorems	38
2-8	Stretched Wire	40
2-9	Surface Film	42
2-10	Reversible Cell	43
2-11	Paramagnetic Solid	45
2-12	Intensive and Extensive Quantities	46

Chapter 3 Work

3-1	Work	51
3-2	Quasi-static Process	52
3-3	Work of a Hydrostatic System	53
3-4	PV Diagram	55
3-5	Work Depends on the Path	56
3-6	Work in Quasi-static Processes	57
3-7	Work of a Wire, a Surface Film, and a Reversible Cell	60
3-8	Work in Changing the Magnetization of a Magnetic Solid	62
3-9	Summary	65
3-10	Compound Systems	65

Chapter 4 Heat and the First Law

4-1	Work and Heat	71
4-2	Adiabatic Work	74
4-3	Internal-energy Function	76
4-4	Mathematical Formulation of the First Law	77
4-5	Concept of Heat	80
4-6	Differential Form of the First Law	81
4-7	Heat Capacity and Its Measurement	82
4 - 8	Heat Capacity of Water; The Calorie	86
4-9	Equations for a Hydrostatic System	88
4-10	Quasi-static Flow of Heat; Heat Reservoir	89
4-11	Heat Conduction	91
4-12	Thermal Conductivity	93
4-13	Heat Convection	96
4-14	Thermal Radiation; Blackbody	97
4-15	Kirchhoff's Law; Radiated Heat	99
4-16	Stefan-Boltzmann Law	102

Chapter 5 Ideal Gases

5-1	Equation of State of a Gas	111
5-2	Internal Energy of a Gas	115
5-3	Ideal Gas	119
5-4	Experimental Determination of Heat Capacities	122
5-5	Quasi-static Adiabatic Process	124
5-6	Clément and Désormes Method of Measuring γ	126
5-7	Rüchhardt's Method of Measuring γ	128
5-8	Modifications of Ruchhardt's Method	130
5-9	Speed of a Longitudinal Wave	132

Chapter 6 Kinetic Theory of an Ideal Gas

6-1	The Microscopic Point of View	145
6-2	Equation of State of an Ideal Gas	147
6-3	Distribution of Molecular Velocities	153
6-4	Maxwellian Speeds and Temperature	157
6-5	Equipartition of Energy	161

Chapter 7 Engines, Refrigerators, and the Second Law

7-1	Conversion of Work into Heat, and Vice Versa	166
7-2	The Stirling Engine	168
7-3	The Steam Engine	171
7-4	Internal Combustion Engines	173
7-5	Kelvin-Planck Statement of the Second Law	177
7-6	The Refrigerator	179
7-7	Equivalence of Kelvin-Planck and Clausius Statements	185

Chapter 8 Reversibility and the Kelvin Temperature Scale

8-1	Reversibility and Irreversibility	191
8-2	External Mechanical Irreversibility	192
8-3	Internal Mechanical Irreversibility	194
8-4	External and Internal Thermal Irreversibility	194
8-5	Chemical Irreversibility	195
8-6	Conditions for Reversibility	196
8-7	Existence of Reversible Adiabatic Surfaces	197
8-8	Integrability of dQ	201

xiv Contents

8-9	Physical Significance of λ	204
8-10	Kelvin Temperature Scale	207
8-1 1	Equality of Ideal-gas Temperature and Kelvin Temperature	209

Chapter 9 Entropy

9-1	The Concept of Entropy	214
9-2	Entropy of an Ideal Gas	216
9-3	TS Diagram	218
9-4	Carnot Cycle	222
9-5	Entropy and Reversibility	223
9-6	Entropy and Irreversibility	225
9-7	Entropy and Nonequilibrium States	229
9-8	Principle of the Increase of Entropy	231
9-9	Engineering Applications of the Entropy Principle	234
9-10	Entropy and Unavailable Energy	236
9-1 1	Entropy and Disorder	239
9-12	Entropy and Direction; Absolute Entropy	240
9-13	Entropy Flow and Entropy Production	241

Chapter 10 Statistical Mechanics

10-1	Fundamental Principles	251
10-2	Equilibrium Distribution	254
10-3	Significance of A and β	258
10-4	Partition Function	261
10-5	Partition Function of an Ideal Monatomic Gas	263
10-6	Equipartition of Energy	266
10-7	Statistical Interpretation of Work and Heat	268
10-8	Disorder, Entropy, and Information	269

Chapter 11 Pure Substances

11-1	Enthalpy	275
11-2	The Helmholtz and Gibbs Functions	279
11-3	Two Mathematical Theorems	282
11-4	Maxwell's Equations	283
11-5	The T dS Equations	286
11-6	Energy Equations	291
11-7	Heat-capacity Equations	293
11-8	Heat Capacity at Constant Pressure	295
11-9	Thermal Expansivity	297
11-10	Compressibility	302

11-11	Heat Capacity at Constant Volume	306
11-12	Statistical Mechanics of a Nonmetallic Crystal	307
11-13	Frequency Spectrum of Crystals	312
11-14	Thermal Properties of Metals	319

Chapter 12 Phase Transitions; Liquid and Solid Helium

12-1	Joule-Kelvin Effect	335
12-2	Liquefaction of Gases by the Joule-Kelvin Effect	338
12-3	First-order Transition; Clapeyron's Equation	346
12-4	Sublimation; Kirchoff's Equation	349
12-5	Vapor-pressure Constant	353
12-6	Measurement of Vapor Pressure	359
12-7	Vaporization	361
12-8	Critical State	368
12-9	Fusion	372
12-10	Higher-order Transitions	377
12-11	Liquid and Solid Helium	382

Chapter 13 Special Topics

13-1	Stretched Wire	396
13-2	Surface Film	396
13-3	Reversible Cell	399
13-4	Fuel Cell	401
13-5	Dielectric in a Parallel-plate Capacitor	403
13-6	Piezoelectric Effect	406
13-7	Thermoelectric Phenomena	409
13-8	Simultaneous Electric and Heat-Currents in a Conductor	411
13-9	Seebeck and Peltier Effects	413
13-10	Thomson Effect and Kelvin Equations	416
13-11	Thermoelectric Refrigeration	419
13-12	Properties of a System of Photons	420
13-13	Bose-Einstein Statistics Applied to Photons	422
13-14	Optical Pyrometer	425
13-15	The Laws of Wien and of Stefan-Boltzmann	428
13-16	Radiation Pressure; Blackbody Radiation as a Thermodynamic System	431

Chapter 14 Paramagnetism, Cryogenics, Negative Temperatures, and the Third Law

14-1	Atomic Magnetism	442
14-2	Statistical Mechanics of a Magnetic-ion Subsystem	446

xvi Contents

14-3	Magnetic Moment of a Magnetic-ion Subsystem	451
14-4	Thermal Properties of a Magnetic-ion Subsystem	456
14-5	Production of Millidegree Temperatures by Ionic Demagnetization	460
14-6	Low-temperature Thermometry	470
14-7	Magnetic Refrigerator	477
14-8	Polarization of Magnetic Nuclei	479
14-9	Production of Microdegree Temperatures by Nuclear Demagnetization	484
14-10	Negative Kelvin Temperatures	487
14-11	The Experiment of Pound, Purcell, and Ramsey	493
14-12	Thermodynamics at Negative Temperatures	496
14-13	Third Law of Thermodynamics	497

Chapter 15 Superfluidity and Superconductivity

15-1	Superfluidity of Liquid Helium II	509
15-2	Fountain Effect	512
15-3	Second Sound	516
15-4	Fourth Sound	522
15-5	Creeping Film; Third Sound	522
15-6	Other Effects of Superfluidity	526
15-7	<u>Motion of He³ through Superfluid He⁴</u>	531
15-8	Superconducting Transition Temperature	532
15-9	Magnetic Properties of Type I Superconductors	536
15-10	Heat Capacities of Type I Superconductors	542
15-11	Energy Gap	547
15-12	Type II Superconductors	550

Chapter 16 Chemical Equilibrium

16-1	Dalton's Law	557
16-2	Semipermeable Membrane	558
16-3	Gibbs' Theorem	559
16-4	Entropy of a Mixture of Inert Gases	561
16-5	Gibbs Function of a Mixture of Inert Ideal Gases	563
16-6	Chemical Equilibrium	565
16-7	Thermodynamic Description of Nonequilibrium States	566
16-8	Conditions for Chemical Equilibrium	568
16-9	Condition for Mechanical Stability	570
16-10	Thermodynamic Equations for a Phase	572

16-1 1	Chemical Potentials	575
16-1 2	Degree of Reaction	577
16-13	Equation of Reaction Equilibrium	580

Chapter 17 Ideal-gas Reactions

17-1	Law of Mass Action	586
17-2	Experimental Determination of Equilibrium Constants	587
17-3	Heat of Reaction	590
17-4	Nernst's Equation	594
17 - 5	Affinity	596
17-6	Displacement of Equilibrium	600
17-7	Heat Capacity of Reacting Gases in Equilibrium	602

Chapter 18 Heterogeneous Systems

18-1	Thermodynamic Equations for a Heterogeneous System	607
18-2	Phase Rule without Chemical Reaction	609
18-3	Simple Applications of the Phase Rule	613
18-4	Phase Rule with Chemical Reaction	617
18-5	Determination of the Number of Components	622
18-6	Displacement of Equilibrium	626

Appendix A:	Physical Constants	635
--------------------	---------------------------	-----

Appendix B :	Riemann Zeta Functions	636
---------------------	-------------------------------	-----

Bibliography	639
---------------------	-----

Answers to Selected Problems	643
-------------------------------------	-----

Index	649
