

CONTENTS

1. INTRODUCTION.....	1
1.1. Background	1
1.2. Objective	2
1.3. Scope	2
1.4. structure of the report	2
2. DEFINITION OF A STRATEGY FOR POST-RESTORATION SITE CHARACTERISATION	3
2.1. The remediation process	3
2.2. Environmental risk assessment	3
2.3. Post-restoration monitoring stage	5
2.4. Choice of an optimum strategy	6
2.5. Monitoring measurements	7
2.6. Determination of background levels	8
2.7. Sampling design considerations	9
3. PLANNING AND MANAGEMENT OF POST-RESTORATION MONITORING	10
3.1. Preliminary activities	10
3.2. Plan development	12
3.3. Organisational structure, roles and responsibilities	12
3.4. Contractors	14
3.5. Interactions with external stakeholders	14
3.6. Health and safety	14
3.7. costs	14
3.8. Reporting.....	16
4. MONITORING TECHNIQUES (MEASUREMENTS AND SAMPLING)	16
4.1. General	16
4.2. In situ radiation measurements	17
4.2.1. Scanning.....	17
4.2.2. Measurements at discrete locations.....	18
4.2.3. Automated monitoring systems	18
4.2.4. Instruments	20
4.2.5. Spectroscopic monitoring (nuclide specific measurement)	23
4.3. Sampling and laboratory measurements	23
4.3.1. Media sampling techniques	23
4.3.2. Sampling frequency and location	25
4.3.3. Laboratory capabilities	26
4.3.4. Subsurface measurements and samples	26
4.4. Calibration	27
5. QUALITY ASSURANCE	28
5.1. General information	28
5.2. Qualifications and training.....	29
5.3. Design control	29
5.4. Procurement control, including sub-contractor services	29
5.5. Selection, calibration and maintenance of equipment and materials	29

5.6. Measuring, sampling and analytical methods301
5.7. Record systems301
6. VERIFICATION OF COMPLIANCE WITH THE CLEANUP CRITERIA	3 1
7. SUMMARY AND CONCLUSIONS	32
REFERENCES	33
APPENDICES A-C	
Appendix A; Preliminary radiological monitoring report for mat	37
Appendix B : Comprehensive post-remedial action radiological monitoring report format	39
Appendix C: Verification of compliance with the cleanup criteria.....	41
ANNEXES I-XI: CASE HISTORIES OF NATIONAL EXPERIENCE	
Annex I: United States of America: Final status survey using MARSSIM survey methodologies at the Cushing refinery site in Oklahoma	47
Annex II: United Kingdom: Post-restoration characterisation of decommissioned sites to ensure compliance with cleanup criteria	59
Annex III: Finland: Criteria for and post-restoration monitoring of decommissioned sites	63
Annex IV: United States of America: Long-term environmental monitoring and assessment programmes as a basis for post-restoration characterisation at two US Department of Energy sites	66
Annex V: Belgium: Site remediation in Belgium	72
Annex VI: Republic of Belarus: The procedure to ensure compliance with the cleanup criteria	76
Annex VII: Canada: LLRMWO experience with post-cleanup site characterisation	78
Annex VIII: France: Radiological survey of the atolls of Mururoa and Fangataufa in French Polynesia after the ending of nuclear testing	84
Annex IX: Slovakia: Site characterisation techniques for remediation and post-remediation survey purposes.....	88
Annex X: Russian Federation: Ecological survey of territories contaminated with radionuclides	94
Annex XI: Denmark: The Project Crested Ice	97
