

## CONTENTS

A note for the readers	ix
1 Real Spin Glass (SG) Materials, SG-Like Materials and SG Models	1
1.1 SG models	2
1.2 Annealed versus quenched disorder; replica trick	11
1.3 An elementary introduction to frustration	13
2 A Brief History of the Early Theories of SG	18
3 SG "Phase Transition": Order Parameters and Mean-Field Theory	24
4 Sherrington-Kirkpatrick (SK) Model and the SK Solution	38
5 Instability of the SK Solution	46
6 Thouless-Anderson-Palmer (TAP) Solution of the SK Model	52
7 Parisi Solution of the SK Model and its Stability	62
8 Sompolinsky's Dynamical Solution of the SK Model and its Stability	68
9 Ergodicity, Pure States, Ultrametricity, and Fluctuation-Dissipation Theorem	73
10 p-Spin Interaction and the Random Energy Model	89
11 Separable SG Glass Models	96
12 The Spherical Model of SG	100
13 MFT of Vector SG: Mixed Phase	103
14 Other Long-Ranged Models	109
15 Anisotropic Exchange Interactions and SG	111
16 Nonlinear Susceptibilities, AT and GT Lines and Scaling Theories	121
17 High-Temperature Expansion, Renormalization Group: Upper and Lower Critical Dimensions	128
18 Spin Dynamics in Vector SG: Propagating Modes	137
19 Spin Dynamics in SG: Relaxational Modes and Critical Dynamics	149
20 Frustration, Gauge Invariance, Defects and SG	162

21	Is the SG Transition Analogous to the Blocking of Superparamagnetic Clusters?	174
22	Is the SG Transition Analogous to Percolation?	178
23	Is the SG Transition Analogous to the Localization-Delocalization Transition?	181
24	Computer Simulation Studies and "Numerically Exact" Treatment of SG Models	186
25	Transport Properties of SG and Sound Attenuation in SG	203
26	Miscellaneous Aspects of SG	211
26.1	Local field distribution in SG	211
26.2	Yang-Lee method for SG and other frustrated models	212
26.3	SG on hierarchical lattices and fractals	216
26.4	Transverse Ising SG model	217
26.5	SG in the clock model	219
26.6	Potts glass	219
26.7	SG on the Bethe lattice	222
26.8	Sensitivity of the free energy to the boundary conditions; exchange stiffness versus scaling stiffness	224
26.9	Induced moment SG	226
26.10	SG freezing and superconductivity in SG materials	227
27	SG-Like Systems	231
27.1	Electric dipolar and quadrupolar glasses	231
27.1.1	$(\text{KCN})_x(\text{KBr})_{1-x}$ : a director glass?	231
27.1.2	Solid hydrogen - a quadrupolar glass?	236
27.1.3	$\text{Rb}_{1-x}(\text{NH}_4)_x\text{H}_2\text{PO}_4$ - hydrogen-bonded mixed crystal of ferroelectric and anti-ferroelectric materials	244
27.2	Electron glass in doped compensated semiconductors?	244
27.3	Superconducting glass phase in granular superconductors and Josephson junction arrays	246
27.4	Travelling salesman problem, computer design and SG	251
27.5	SG model of crystal surfaces	259
27.6	Ultradiffusion: dynamics on ultrametric space	260
27.7	Neural networks, content addressable memories, pattern recognition and SG	264

27.8	Modelling of prebiotic evolution and the origin of life: analogy with SG?	275
28	Conclusion	277
APPENDICES		
Appendix A:	SG Systems and the Nature of the Interactions	278
Appendix B:	General Features of the Experimental Results	283
	B.1 Magnetization and susceptibility measurements	286
	B.2 Specific heat measurements	300
	B.3 Neutron scattering	303
	B.4 Electron spin resonance (ESR)	308
	B.5 Nuclear magnetic resonance (NMR)	313
	B.6 Muon spin relaxation ( $\mu$ SR)	314
	B.7 Mossbauer spectroscopy	317
	B.8 Resistivity and Magnetoresistance	317
