

CONTENTS

1. INTRODUCTION		
1.1	Superconductivity	1
1.2	Superconducting materials	2
1.3	Large-scale application of superconductivity	4
1.3.1	Superconducting magnets	4
1.3.2	Electrical machinery with superconducting coils	4
1.3.3	Superconducting power transmission lines	5
1.4	The problem of dissipation in superconductors. Purpose and content of the present work	7
2. SUPERCONDUCTIVITY		10
2.1	Classification of superconductors. Vortex structure	10
2.2	Single vortex	12
2.2.1	Single vortex in an infinite superconductor	12
2.2.2	The vortex near the boundaries of the superconductor. The Bean-Livingston barrier	13
2.3	Ideal type-II superconductors. Energy dissipation in ideal type-II superconductors	18
2.4	Non-ideal type-II superconductors	20
2.4.1	Pinning and critical current	20
2.4.2	Mechanisms of pinning	21
2.4.3	Critical state model	24
2.4.4	Low-frequency dissipation in non-ideal type-II superconductors	30
3. EXPERIMENTAL METHODS		34
3.1	Calorimetric methods	34
3.1.1	Method of isothermal calorimetry	34
3.1.2	Methods of adiabatic and semi-adiabatic calorimetry	35
3.2	Electromagnetic methods	39
3.2.1	Measurement of the magnetization hysteresis area	40
3.2.2	The superconducting transformer	42
3.2.3	Poynting's vector measurements	43

4.	MEASUREMENT TECHNIQUES	46
4.1	Principle of the measurement system based on the electronic wattmeter	46
4.2	Calculation of dissipation according to the wattmeter readings	49
4.3	The wattmeter circuit and its adjustment	51
4.4	Other measurement techniques	55
5.	INVESTIGATED SAMPLES. PREPARATION, TREATMENT, DIAGNOSTICS	60
5.1	$\text{Nb}_3\text{Sn} (\text{Nb}, \text{}_{-x}\text{Zr}_x)_3\text{Sn} $	60
5.2	$\text{Nb}_3\text{Ge} $	66
5.3	Nb	68
5.4	V_2Hf and NbN	70
6.	THE SURFACE OF THE SUPERCONDUCTOR AND DISSIPATION	72
6.1	The influence of the surface condition on dissipation	72
6.2	Absorption of hydrogen during chemical treatment of $\text{Nb}_3\text{Sn} $ Normal metal on the surface of the superconductor and dissipation	82
7.	SURFACE SHIELDING FIELD. NON-DISSIPATIVE RESPONSE OF A NON-IDEAL TYPE-II SUPERCONDUCTOR TO a.c. FIELDS OF LOW AMPLITUDES. MAGNETIC FIELD PENETRATION DEPTH	94
7.1	Experimental determination of the surface shielding field	94
7.2	Non-dissipative response of a non-ideal type-II superconductor to a modulating field of low amplitude	101
7.3	Change of the magnetic flux penetration depth as a result of the surface treatment of the superconductor	105
8.	TEMPERATURE DEPENDENCE OF THE DISSIPATION	109
8.1	The influence of Zr additions on losses in $(\text{Nb}, \text{}_{-x}\text{Zr}_x)_3\text{Sn} / \text{Nb} \text{}_{-x}\text{Zr}_x / (\text{Nb}_{1-x}\text{Zr}_x)_3\text{Sn} $ structures	110
8.2	Some technological factors in the preparation of $(\text{Nb}, \text{}_{-x}\text{Zr}_x)_3\text{Sn}(\text{SSD})$ which affect losses at >4.2 K	121
8.3	Dissipation at temperatures <4.2 K	128

9. DISSIPATION UNDER SUPERPOSED a.c. AND d.c.] MAGNETIC FIELDS	132
9.1 Experimental study of the dissipation minimum	132
9.2 Models for an interpretation of the dissipation minimum	140
9.3 The dissipation minimum under non-collinear magnetic fields	1.53
10. DISSIPATION AND CRITICAL CURRENT IN TECHNICAL TAPES BASED ON Nb ₃ Sn] AND Nb ₃ Ge]	164
10.1 Losses in stabilizing materials	164
10.2 Critical current of Nb ₃ Sn tapes under strain	166
10.3 Losses and critical current in Nb ₃ Sn] tapes	167
10.4 Losses in technical superconducting tapes based on Nb ₃ Ge(CVD)]	169
11. DISSIPATION IN SUPERCONDUCTING LAVES PHASE COMPOUNDS, NIOBIUM NITRIDE, AND A NEW HIGH T _d] MATERIAL	174
11.1 V ₂ Hf]	174
11.2 Ternary and quaternary Laves phases based on V ₂ Hf]	177
11.3 NbN]	183
11.4 Y-Ba-Cu-Pt-O]	184
12. ENERGY DISSIPATION IN ADVANCED COMPOSITE SUPERCONDUCTORS	190
12.1 Composite materials with submicron filament diameters	200
12.2 Some theoretical estimates of the proximity effect and one-dimensional pinning in superconducting composites with ultrafine filaments	207
12.2.1 Influence of the proximity effect on T _d] and H _{c2}]	208
12.2.2 Superconducting properties of the copper matrix	209
12.2.3 One-dimensional vortex structure in ultrafine filaments	211
