

CONTENTS

SUMMARY	1
1. Objective..	1
2. Assumptions of demand	1
3. Secondary supply	2
4. Primary supply and market based production	2
5. Projection of the contribution of market based production	2
6. Resourcecategories..	2
7. Priority of startup of production centres	3
8. Analysis of cumulative supply and demand to 2050	3
9. Results of analysis of cumulative supply and demand to 2050	4
10. Projected production cost	4
11. Sensitivity analysis	5
12. Discussion..	5
1. INTRODUCTION	6
2. SCOPE OF THE STUDY	7
3. METHODOLOGY AND ASSUMPTIONS	9
3.1. Demand..	9
3.2. Supply..	13
3.2.1. HEU from surplus defence inventories	14
3.2.1.1. Background	14
3.2.1.2. Status of the Russian HEU commercialization programme	14
3.2.1.3. Status of the US HEU commercialization programme	17
3.2.1.4. Projected HEU availability and market penetration factors	18
3.2.1.5. Potential for additional HEU supply	18
3.2.1.6. Trade restrictions and other national policies	19
3.2.2. Inventory	19
3.2.2.1] Western natural and low enriched naural uranium inventory (commercial inventory)	19
3.2.2.2. Russian natural and low enriched uranium inventory	21
3.2.3. MOX and RepU	22
3.2.4. Depleted uranium stockpiles (tails)	23
3.2.4.1. Background	23
3.2.4.2. Current uses of depleted uranium	24
3.2.4.3. Existing stockpiles of depleted uranium	24
3.2.4.4. Scenario for depleted uranium use to 2050	25
3.2.5. Natural uranium production	26
3.2.5.1. The CIS	27
3.2.5.2. National programmes	29
3.2.5.3. China	30
3.2.5.4. Market based production	30
4. ANALYSIS	41
4.1. Uranium resources availability and utilization — middle demand case	41
4.1.1. Study RAR- data synthesis	41

4.1.2. Study RAR — data limitations	45
4.1.2.1. Unutilized resources	45
4.1.2.2. Implications of environmental and/or political opposition	46
4.1.3. Non-attributed RAR — data synthesis	48
4.1.4. Non-attributed RAR — data limitations	49
4.1.5. Total RAR — data limitations	49
4.1.6. EAR-I — data synthesis	50
4.1.7. EAR-I — data limitations	52
4.1.8. EAR-II — data synthesis	53
4.1.9. EAR-II — data limitations	54
4.2. Uranium resources availability and utilization — low demand case	56
4.3. Uranium resources availability and utilization — high demand case	56
5. CONCLUSIONS	59
5.1. Adequacy of resources	59
5.1.1. Adequacy of RAR through to EAR-II	59
5.1.2. Effect of lowering enrichment tails assay	59
5.1.3. SR	61
5.1.3.1. Uranium deposit types and examples	61
5.1.3.2. Reported SRU	63
5.1.4. Unconventional resources	64
5.1.4.1. Phosphorite deposits	64
5.1.4.2. Black shale deposits	65
5.1.4.3. Lignite and coaldeposits	65
5.1.4.4. Sea water	66
5.1.5. Sensitivity studies	66
5.1.5.1. HEU	66
5.1.5.2. MOX, RepU and re-enrichment of depleted uranium	67
5.1.5.3. Impact of removing resources with potential environmental and/or political opposition from the resource base	67
5.1.6. Production capacity and unutilized resources	68
5.2. Exploration requirements	70
5.3. Production costs and uranium market price implications	72
5.4. Environmental implications of the three demand cases	72
APPENDIX I: INTERNATIONAL INSTITUTE FOR APPLIED SYSTEMS ANALYSIS (IIASA) AND WORLD ENERGY COUNCIL (WEC) STUDY	75
APPENDIX II: ECONOMIC MODEL FOR TAILS RE-ENRICHMENT	77
APPENDIX III: REVIEW OF THE WORLDWIDE URANIUM PRODUCTION INDUSTRY	78
111.1. Australia	78
111.2. Canada	78
111.3. Kazakhstan	81
111.4. Niger	84
111.5. The Russian Federation	87
111.6. Ukraine	88
111.7. The USA	91
111.8. Uzbekistan	92
APPENDIX IV: INTERNATIONAL URANIUM RESOURCES EVALUATION PROJECT (IUREP)	94

APPENDIX V: RESOURCE DEFINITIONS AND TERMINOLOGY 95
