SYMBOLS AND UNITS, xv

ABBREVIATIONS, xxii

PHYSICAL CONSTANTS, xxiii

1. Introduction, 3

- 1.1 The Concept of Bioelectromagnetism, 3
- 1.2 Subdivisions of Bioelectromagnetism, 4
- 1.3 Importance of Bioelectromagnetism, 10
- 1.4 Short History of Bioelectromagnetism, 11
- 1.5 Nobel Prizes in Bioelectromagnetism, 25

I ANATOMICAL AND PHYSIOLOGICAL BASIS OF BIOELECTROMAGNETISM

2. Nerve and Muscle Cells, 33

- 2.1 Introduction, 33
- 2.2 Nerve Cell, 33
- 2.3 Muscle Cell, 36
- 2.4 Bioelectric Function of the Nerve Cell, 37
- 2.5 Excitability of Nerve Cell, 38
- 2.6 The Generation of the Activation, 39
- 2.7 Concepts Associated with the Activation Process, 39
- 2.8 Conduction of the Nerve Impulse in an Axon, 42

3. Subthreshold Membrane Phenomena, 44

- 3.1 Introduction, 44
- 3.2 Nernst Equation, 45
- 3.3 Origin of the Resting Voltage, 50
- 3.4 Membrane with Multi-ion Permeability, 51
- 3.5 Ion Flow Through the Membrane, 54
- 3.6 Cable Equation of the Axon, 56
- 3.7 Strength-Duration Relation, 62

4. Active Behavior of the Membrane, 66

- 4.1 Introduction, 66
- 4.2 Voltage Clamp Method, 67
- 4.3 Examples of Results Obtained with the Voltage Clamp Method, 70
- 4.4 Hodgkin-Huxley Membrane Model, 74
- 4.5 Patch Clamp Method, 93
- 4.6 Modern Understanding of the Ionic Channels, 97

5. Synapse, Receptor Cells, and Brain, 106

- 5.1 Introduction, 106
- 5.2 Synapses, 107
- 5.3 Receptor Cells, 111
- 5.4 Anatomy and Physiology of the Brain, 113
- 5.5 Cranial Nerves, 117

6. The Heart, 119

- 6.1 Anatomy and Physiology of the Heart, 119
- 6.2 Electric Activation of the Heart, 121
- 6.3 The Genesis of the Electrocardiogram, 124

II BIOELECTRIC SOURCES AND CONDUCTORS AND THEIR MODELING

7. Volume Source and Volume Conductor, 133

- 7.1 Concepts of Volume Source and Volume Conductor, 133
- 7.2 Bioelectric Source and Its Electric Field, 134
- 7.3 The Concept of Modeling, 136
- 7.4 The Human Body as a Volume Conductor, 140
- 7.5 Forward and Inverse Problems, 143

8. Source-Field Models, 148

- 8.1 Introduction, 148
- 8.2 Source Models, 148
- 8.3 Equivalent Volume Source Density, 152
- 8.4 Rigorous Formulation, 155
- 8.5 Mathematical Basis for Macroscopic Volume Source Density (Flow Source Density) and Impressed Current Density, 156
- 8.6 Summary of the Source-Field Models, 158

9. Bidomain Model of Multicellular Volume Conductors, 159

- 9.1 Introduction, 159
- 9.2 Cardiac Muscle Considered as a Continuum, 159
- 9.3 Mathematical Description of the Bidomain and Anisotropy, 161
- 9.4 One-Dimensional Cable: A One-Dimensional Bidomain, 162
- 9.5 Solution for Point-Current Source in a Three-Dimensional, Isotropic Bidomain, 164
- 9.6 Four-Electrode Impedance Method Applied to an Isotropic Bidomain, 167

10. Electronic Neuron Models, 169

- 10.1 Introduction, 169
- 10.2 Classification of Neuron Models, 171
- 10.3 Models Describing the Function of the Membrane, 171
- 10.4 Models Describing the Cell as an Independent Unit, 174
- 10.5 A Model Describing the Propagation of Action Pulse in Axon, 179
- 10.6 Integrated Circuit Realizations, 180

III THEORETICAL METHODS IN BIOELECTROMAGNETISM

11. Theoretical Methods for Analyzing Volume Sources and Volume Conductors, 185

- 11.1 Introduction, 185
- 11.2 Solid-Angle Theorem, 185
- 11.3 Miller-Geselowitz Model, 188
- 11.4 Lead Vector, 190**
- 11.5 Image Surface, 195
- 11.6 Lead Field, 201
- 11.7 Gabor-Nelson Theorem, 221
- 11.8 Summary of the Theoretical Methods for Analyzing Volume Sources and Volume Conductors, 224

12. Theory of Biomagnetic Measurements, 227

- 12.1 Biomagnetic Field, 227
- 12.2 Nature of the Biomagnetic Sources, 228
- 12.3 Reciprocity Theorem for Magnetic Fields, 230
- 12.4 The Magnetic Dipole Moment of a Volume Source, 235
- 12.5 Ideal Lead Field of a Lead Detecting the Equivalent Magnetic Dipole of a Volume Source, 236
- 12.6 Synthesization of the Ideal Lead Field for the Detection of the Magnetic Dipole Moment of a Volume Source, 237
- 12.7 Comparison of the Lead Fields of Ideal Leads for Detecting the Electric and Magnetic Dipole Moments of a Volume Source, 240
- 12.8 The Radial and Tangential Sensitivities of the Lead Systems Detecting the Electric and Magnetic Dipole Moments of a Volume Source, 242
- 12.9 Special Properties of the Magnetic Lead Fields, 243
- 12.10 The Independence of Bioelectric and Biomagnetic Fields and Measurements, 244
- 12.11 Sensitivity Distribution of Basic Magnetic Leads, 247

IV ELECTRIC AND MAGNETIC MEASUREMENT OF THE ELECTRIC ACTIVITY OF NEURAL TISSUE

13. Electroencephalography, 257

- 13.1 Introduction, 257
- 13.2 The Brain as a Bioelectric Generator, 257
- 13.3 EEG Lead Systems, 258
- 13.4 Sensitivity Distribution of EEG Electrodes, 260

- 13.5 The Behavior of the EEG Signal, 263
- 13.6 The Basic Principles of EEG Diagnosis, 264

14. Magnetoencephalography, 265

- 14.1 The Brain as a Biomagnetic Generator, 265
- 14.2 Sensitivity Distribution of MEG Leads, 266
- 14.3 Comparison of the EEG and MEG Half-Sensitivity Volumes, 270
- 14.4 Summary, 272

V ELECTRIC AND MAGNETIC MEASUREMENT OF THE ELECTRIC ACTIVITY OF THE HEART

15. 12-Lead ECG System, 277

- 15.1 Limb Leads, 277
- 15.2 ECG Signal, 278
- 15.3 Wilson Central Terminal, 284
- 15.4 Goldberger Augmented Leads, 285
- 15.5 Precordial Leads, 286
- 15.6 Modifications of the 12-Lead System, 286
- 15.7 The Information Content of the 12-Lead System, 288

16. Vectorcardiographic Lead Systems, 290

- 16.1 Introduction, 290
- 16.2 Uncorrected Vectorcardiographic Lead Systems, 292
- 16.3 Corrected Vectorcardiographic Lead Systems, 296
- 16.4 Discussion of Vectorcardiographic Leads, 303

17. Other ECG Lead Systems, 307

- 17.1 Moving Dipole, 307
- 17.2 Multiple Dipoles, 307
- 17.3 Multipole, 308
- 17.4 Summary of the ECG Lead Systems, 309

18. Distortion Factors in the ECG, 313

- 18.1 Introduction, 313
- 18.2 Effect of the Inhomogeneity of the Thorax, 313
- 18.3 Brody Effect, 314
- 18.4 Effect of Respiration, 316
- 18.5 Effect of Electrode Location, 318

19. The Basis of ECG Diagnosis, 320

- 19.1 Principle of the ECG Diagnosis, 320
- 19.2 Application Areas of ECG Diagnosis, 321
- 19.3 Determination of the Electric Axis of the Heart, 322

- 19.4 Cardiac Rhythm Diagnosis, 323
- 19.5 Disorders in the Activation Sequence, 328
- 19.6 Increase in Wall Thickness or Size of Atria and Ventricles, 332
- 19.7 Myocardial Ischemia and Infarction, 334

20. Magnetocardiography, 336

- 20.1 Introduction, 336
- 20.2 Basic Methods in Magnetocardiography, 336
- 20.3 Methods for Detecting the Magnetic Heart Vector, 339
- 20.4 Sensitivity Distribution of Basic MCG Leads, 346
- 20.5 Generation of the MCG Signal from the Electric Activation of the Heart, 348
- 20.6 ECG-MCG Relationship, 353
- 20.7 Clinical Application of Magnetocardiography, 354

VI ELECTRIC AND MAGNETIC STIMULATION OF NEURAL TISSUE

21. Functional Electric Stimulation, 363

- 21.1 Introduction, 363
- 21.2 Simulation of Excitation of a Myelinated Fiber, 363
- 21.3 Stimulation of an Unmyelinated Axon, 368
- 21.4 Muscle Recruitment, 370
- 21.5 Electrode-Tissue Interface, 372
- 21.6 Electrode Materials and Shapes, 373

22. Magnetic Stimulation of Neural Tissue, 375

- 22.1 Introduction, 375
- 22.2 The Design of Stimulator Coils, 376
- 22.3 Current Distribution in Magnetic Stimulation, 377
- 22.4 Stimulus Pulse, 379
- 22.5 Activation of Excitable Tissue by Time-Varying Magnetic Fields, 379
- 22.6 Application Areas of Magnetic Stimulation of Neural Tissue, 380

VII ELECTRIC AND MAGNETIC STIMULATION OF THE HEART

23. Cardiac Pacing, 385

- 23.1 Stimulation of Cardiac Muscle, 385
- 23.2 Indications for Cardiac Pacing, 385
- 23.3 Cardiac Pacemaker, 386
- 23.4 Site of Stimulation, 389
- 23.5 Excitation Parameters and Configuration, 389

- 23.6 Implantable Energy Sources, 391
- 23.1 Electrodes, 39 1
- 23.8 Magnetic Stimulation of Cardiac Muscle, 392

24. Cardiac Defibrillation, 393

- 24.1 Introduction, 393
- 24.2 Mechanisms of Fibrillation, 393
- 24.3 Theories of Defibrillation, 396
- 24.4 Defibrillator Devices, 400

VIII MEASUREMENT OF THE INTRINSIC ELECTRIC PROPERTIES OF BIOLOGICAL TISSUES

25. Impedance Plethysmography, 405

- 25.1 Introduction, 405
- 25.2 Bioelectric Basis of Impedance Plethysmography, 405
- 25.3 Impedance Cardiography, 408
- 25.4 Origin of Impedance Signal in Impedance Cardiography, 4 12
- 25.5 Other Applications of Impedance Plethysmography, 416
- 25.6 Discussion. 417

26. Impedance Tomography, 420

- 26.1 Introduction, 420
- 26.2 Impedance Measurement Methods, 421
- 26.3 Image Reconstruction, 426

27. The Electrodermal Response, 428

- 27.1 Introduction, 428
- 27.2 Physiology of the Skin, 428
- 27.3 Electrodermal Measures, 430
- 27.4 Measurement Sites and Characteristic Signals, 430
- 27.5 Theory of EDR, 432
- 27.6 Applications, 434

IX OTHER BIOELECTROMAGNETIC PHENOMENA

28. The Electric Signals Originating in the Eye, 437

- 28.1 Introduction, 437
- 28.2 Anatomy and Physiology of the Eye and Its Neural Pathways, 437
- 28.3 Electra-Oculogram, 440
- 28.4 Electroretinogram, 442

APPENDIXES

A. Consistent System of Rectangular and Spherical Coordinates for Electrocardiology and Magnetocardiology, 449

- A. 1 Introduction, 449
- A.2 Requirements for a Consistent System of Coordinates, 450
- A.3 Alignment of the Coordinate System with the Body, 450
- A.4 Consistent Spherical Coordinate Systems, 45 1
- A.5 Comparison of the Consistent Coordinate System and the AHA-System, 452
- A.6 Rectangular ABC Coordinates, 453

B. Application of Maxwell's Equations in Bioelectromagnetism, 455

- B.1 Introduction, 455
- B.2 Maxwell's Equations Under Free Space Conditions, 455
- B.3 Maxwell's Equations for Finite Conducting Media, 456
- B.4 Simplification of Maxwell's Equations in Physiological Preparations, 457
- B.5 Magnetic Vector Potential and Electric Scalar Potential in the Region Outside the Sources, 458
- B.6 Stimulation with Electric and Magnetic Fields, 460
- B.7 Simplified Maxwell's Equations in Physiological Preparations in the Region Outside the Sources, 461

NAME INDEX, 463

SUBJECT INDEX, 471
