

CONTENTS

1.	INTRODUCTION	1
1.1.	Background	1
1.2.	Objective	2
1.3.	Scope	2
1.4.	Structure..	3
2.	OPTIMIZATION PROCESS	3
3.	ASSESSMENT OF EXPOSURE SITUATIONS	9
3.1.	Global evaluation of the exposure situation	10
3.1.1.	Design stage	10
3.1.1.1.	Example 1: Individual dose constraints and indicators	11
3.1.1.2.	Example 2: Design of a major facility	11
3.1.2.	Operational stage	13
3.1.2.1	Example 4: Involvement of personnel in the process of evaluating exposures	15
3.2.	Job specific evaluation and analysis	15
3.2.1.	Prior evaluation of all radiation jobs	15
3.2.1 .11	Example 6: Analysis of similar jobs performed successively in different workplaces	17
3.2.2.	Analysis of exposure situations for specific jobs in the context of carrying out a detailed study for the optimization of radiation protection	18
3.3.	How to obtain the data	18
3.3.1.	Facility level and national level	18
3.3.1 .11	Example 7: IAEA Regulatory Authority Information System	20
3.3.2.	International level	21
3.3.2.1.	Example 8: Information System on Occupational Exposure	21
4.	MEANS OF REDUCING EXPOSURE	22
4.1.	Introduction	22
4.2.	Global means of reducing exposure	22
4.2.1.	Work planning and scheduling	22

4.2.1.1. Example 9: Schedule of works according to the evolution of dose rates	23
4.2.2. General worker education	23
4.2.2.1. Example 10: A software learning program — RADIOR..	24
4.2.3. Awareness and involvement of workers	24
4.2.3.1. Example 11: Mobile industrial radiography	25
4.2.4. Communication	26
4.2.4.1. Example 12: Improving communication by the use of suggestion boxes	26
4.3. Job specific means to reduce exposure	26
4.3.1. Facility and equipment design	26
4.3.1.1 Example 13: Factors for evaluation in a decision on the need to install permanent shielding	27
4.3.2. Reducing the time spent in radiation areas	28
4.3.2.1. Example 14: Factors that increase exposure time ..	29
4.3.3. Reducing the number of workers necessary	29
4.3.4. Reducing dose rates	30
4.3.4.1. Example 15: Long handled tools	31
4.3.5. Specialized training	32
5. DEFINING AND IMPLEMENTING AN ALARA PLAN	32
5.1. Global components	33
5.1.1. Example 16: Creation of specific ALARA management structures	34
5.2. Analysis and selection of job specific options for dose reduction ..	34
5.2.1. Analysis of options	34
5.2.1.1 Example 17: Identification of cost savings	35
5.2.2. Selection of options to be implemented	36
5.3. Monitoring the effectiveness of an ALARA plan	36
6. CONCLUSIONS	38
REFERENCES	39
ANNEX I: DECISION AIDING TECHNIQUES	43
I-1. Introduction	43
I-2. Cost-benefit analysis	44
I-3. Extended cost-benefit analysis	44

I-4. Multiattribute utility analysis	45
I-5. Multicriteria outranking analysis	46
References to Annex I	47
ANNEX II: ALARA CHECKLISTS	48
ANNEX III: MONETARY VALUE OF THE UNIT COLLECTIVE DOSE	57
III-1. Introduction	57
III-2] Evaluation of the reference monetary value of a man-sievert	58
111-2.1. Dose-effect relationship and the monetary value of health effects	58
111-2.1.1. Example III-1 : Calculation of the monetary value of a man-sievert using the human capital approach	59
111-2.2. How to take account of individual dose distributions	59
111-2.2.1. Example 111-2: A model to determine a set of monetary values of a man-sievert according to the level of individual doses	59
1113. Examples of monetary values used for the unit collective dose	60
References to Annex III	64
