## CHAPTER I

### HISTORICAL INTRODUCTION

	Page
1.1. The Scientific Picture . . . .	1
1.6. Light in Relation to Biological Science . . . .	3
1.9. Light in Relation to Physical Science . . . .	5
1.10. Waves or Corpuscles . . . .	5
1.11. Rays of Light . . . . .	6
1.12. Interference . . . . .	7
1.13. Development of the Wave Theory . . . . .	8
1.14. Electromagnetic Theory . . . . .	10
1.15. The Electromagnetic Spectrum . . . . .	11
1.16. Photons . . . . .	13
1.17. Relativity Theory . . . . .	14
1.18. Modern Quantum Theory . . . . .	14
E XAMPLES [(i)-(vi)] . . . . .	17

## CHAPTER II

### WAVE THEORY-INTRODUCTION

2.1. Fundamental Ideas . . . . .	18
2.3. The Simple Harmonic Oscillator . . . . .	18
2.4. Experimental Observations . . . . .	19
2.5. Equations of Motion . . . . .	21
E XAMPLES [2(i)-2(vi)] . . . . .	22
E XAMPLES [2(vii) and 2(viii)] . . . . .	23
2.8. Vector Representation of Simple Harmonic Motion . . . . .	24
2.9. Equation of Propagation-One Dimension . . . . .	26

	Page
2.11. Wavelength and Wavelength Constant . . . . .	28
2.12. Phase . . . . .	28
<b>E XAMPLES</b> [2(ix)-2(xi)] . . . . .	28
2.13. Propagation of Waves in Three Dimensions . . . . .	29
2.14. Plane Waves . . . . .	29
2.15. The Wave Equation . . . . .	30
<b>E XAMPLES</b> [2(xii)-2(xv)] . . . . .	31
2.16. The Velocity of Propagation . . . . .	31
2.17. Waves on a Rod . . . . .	32
2.18. Transport of Energy and Momentum . . . . .	33
2.20. Spherical Waves-Inverse Square Law . . . . .	34
2.21. Photometry-Definitions . . . . .	36
2.22. Doppler-Fizeau Principle . . . . .	37
2.26. Representation of Wave Motion by Complex Quantities . . . . .	40
<b>EXAMPLES</b> [2(xvi)-2(xviii)] . . . . .	41
<b>REFERENCES</b> . . . . .	41

## CHAPTER III

## WAVE THEORY-COMBINATION OF WAVE MOTIONS

3.1. Principle of Superposition . . . . .	42
3.3. Addition of Simple Harmonic Motions . . . . .	43
3.4. Algebraic Method . . . . .	43
3.5. Vector Method . . . . .	45
<b>E XAMPLES</b> [3(i)-3(vi)] . . . . .	49
3.8. Huygens' Principle . . . . .	50
3.11. Reflection and Refraction at Plane Surfaces . . . . .	52
3.13. Wave Theory of Reflection and Refraction . . . . .	54
3.14. Reflection and Refraction at Spherical Surfaces: Mirrors and Lenses . . . . .	56
<b>E XAMPLES</b> [3(vii)] and [3(viii)] . . . . .	58
3.17. Dispersion . . . . .	59
3.20. Stationary Waves . . . . .	60
3.22. Wiener's Experiment . . . . .	63
3.26. Coefficient of Reflection-Normal Incidence . . . . .	65
3.30. Optical Path Difference . . . . .	67
3.31. Corpuscular Theory of Reflection and Refraction . . . . .	68
<b>E XAMPLES</b> [3(ix)-3(xv)] . . . . .	69

## CHAPTER IV

REPRESENTATION OF LIGHT BY WAVE TRAINS OF  
FINITE LENGTH

	Page
4.1. Sources of Light. Types of Spectra - - - - -	71
4.2. Line Spectra and Continuous Spectra - - - - -	71
4.3. Band Spectra - - - - -	72
4.4. Infrared and Ultra-violet Spectra - - - - -	72
4.5. Absorption Spectra - - - - -	72
4.6. Atomic Oscillators - - - - -	73
4.8. The Michelson Interferometer - - - - -	74
4.10. Visibility of the Fringes - - - - -	77
4.15. Waves of Irregular Profile - - - - -	81
4.17. Fourier's Series - - - - -	83
4.19. Fourier's Integral - - - - -	87
4.21. The Gaussian Wave Group - - - - -	89
4.25. Width of Spectral Lines - - - - -	92
4.28. Propagation of a Wave Group in a Dispersive Medium - - - - -	95
4.29. Group Velocity - - - - -	96
4.32. Representation of Light by Wave Groups - - - - -	98
4.33. White Light - - - - -	99
<b>E X A M P L E S [4(i)–4(ix)] - - - - -</b>	<b>100</b>
<b>REFERENCES - - - - -</b>	<b>103</b>
<b>APPENDIX IVA—Adjustment of the Michelson Interferometer - - - - -</b>	<b>103</b>
<b>APPENDIX IVB—Fourier Series and Fourier's Integral Theorem - - - - -</b>	<b>104</b>
Analysis of a sharply limited Wave Train - - - - -	109
Profile for sharply limited Wave Band - - - - -	110
Distribution of Energy for a Damped Harmonic Wave - - - - -	111
The Gaussian Wave Group - - - - -	112
Progress of the Wave Group in a Dispersive Medium - - - - -	112

## CHAPTER V

## INTERFERENCE

5.1. Law of Photometric Summation - - - - -	114
5.3. Coherent and Non-coherent Beams of Light - - - - -	116
5.5. Formation of Interference Fringes - - - - -	117

	Page
5.7. Interference between Two Sources Side by Side	119
5.12. Interference produced by Thin Films	123
5.14. Visibility of the Fringes	125
5.16. Fringes as Loci of Constant Path Difference	127
5.17. Fringes of Constant Inclination	128
5.18. Fringes of Constant Optical Thickness	129
5.19. Newton's Rings	130
EXAMPLES [5(i)-5(ix)]	131
5.20. Localization of Interference Fringes	132
5.22. Non-reflecting Films	134
5.24. High-efficiency Reflecting Films	136
EXAMPLES [5(x)-5(xii)]	137
5.26. Interference with Multiple Beams	137
5.28. Fabry-Pérot Interferometer	140
5.29. Lummer-Gehrcke Plate	140
5.30. Channelled Spectra	141
5.31. Edser-Butler Method of Calibrating a Spectrograph	142
EXAMPLES [5(xiii)-5(xvi)]	143
5.32. Fringes of Superposition	143
5.34. Achromatic Fringes	145
5.36. Achromatic Systems of Fringes	147
5.40. Achromatization of Newton's Rings	149
EXAMPLES [5(xvii)-5(xix)]	151
REFERENCES	151

## CHAPTER VI

## DIFFRACTION

6.1. General Character of the Observations	152
6.3. Fresnel and Fraunhofer Diffraction	153
6.5. Theory of Diffraction. The General Problem	156
6.10. Extension of the Concept of a Wave Group	159
6.12. Beam of Finite Width—One Dimension	160
6.13. St. Venant's Hypothesis	161
6.14. Beam restricted in Two Dimensions	162
6.15. Diffraction at a Rectangular Aperture	163

# CONTENTS

xi

	Page
6.16. Diffraction at a Circular Aperture - - - - -	163
6.17. Diffraction with a Slit Source - - - - -	165
6.18. Diffraction by a Number of Similar Apertures - - - - -	166
6.21. Babinet's Theorem - - - - -	170
6.22. Diffraction by a Number of Circular Apertures or Obstacles - - - - -	170
6.23. Young's Experiments - - - - -	171
6.24. Diffraction by Reflecting Screens - - - - -	171
6.25. Diffraction by a Screen not Coincident with a Wave Surface - - - - -	172
6.26. Laws of Rectilinear Propagation, Reflection and Refraction - - - - -	174
6.27. Diffraction Gratings - - - - -	174
6.28. The Functions $f(U)$ and $F(NW)$ - - - - -	176
6.30. Distribution of Light among the Principal Maxima - - - - -	179
6.31. Diffraction Grating Spectra - - - - -	181
6.32. Overlapping of Orders - - - - -	182
6.33. Gratings Ruled on Glass or Metal - - - - -	182
6.36. Echelette Gratings - - - - -	184
6.39. The Michelson Echelon Grating - - - - -	186
6.40. The Michelson-Williams Reflecting Echelon - - - - -	187
6.41. Theory of the Reflecting Echelon - - - - -	188
EXAMPLES [6(i)-6(x)] - - - - -	189
REFERENCES - - - - -	190
APPENDIX VIA—Kirchhoff's Diffraction Formula - - - - -	191
APPENDIX VIB—The Concave Grating - - - - -	194

## CHAPTER VII

### HUYGENS' PRINCIPLE AND FERMAT'S PRINCIPLE

7.1. Development of Huygens' Principle - - - - -	198
7.2. Fresnel's Method - - - - -	199
EXAMPLES [7(i)-7(iv)] - - - - -	202
7.5. Kirchhoff's Analysis - - - - -	202
7.6. Elimination of the Reverse Wave - - - - -	203
7.7. Diffraction at a Circular Aperture - - - - -	204

	<b>Page</b>
7.8. Diffraction by a Circular Obstacle . . . . .	205
E XAMPLES                    [7(v)-7(viii)] . . . . .	206
7.11. The Zone Plate . . . . .	206
7.15. <b>Fresnel's</b> Integrals . . . . .	<b>209</b>
7.17. Cornu's Spiral . . . . .	211
7.21. Diffraction at a Straight Edge . . . . .	214
7.22. Rectilinear Propagation . . . . .	215
7.23. Fermat's Principle . . . . .	<b>210</b>
7.26. <b>Gouy's</b> Experiment . . . . .	220
7.27. Relation between Wave and Ray Optics . . . . .	222
7.28. Ray and Wave Normals . . . . .	223
7.29. Rays in Relation to Wave Groups . . . . .	223
7.30. Fermat's Principle as a General Statement of the Laws of Ray Optics	224
<b>E XAMPLES</b> [7(ix)-7(xvii)] . . . . .	224
R EFERENCES . . . . .	225

## CHAPTER VIII

## THE ACCURACY OF OPTICAL MEASUREMENTS

8.1. Imperfections in Images due to Diffraction . . . . .	226
8.2. The <b>Rayleigh</b> Criterion . . . . .	226
8.5. Limit of Resolution for a Telescope . . . . .	228
E XAMPLES                    [8(i)-8(iii)] . . . . .	230
8.7. Limit of Resolution for the Eye . . . . .	230
8.8. Useful and Empty Magnification . . . . .	231
8.9. Resolving Power of a Prism Spectroscope . . . . .	231
8.10. Resolving Power of a Grating Spectroscope . . . . .	233
8.12. The <b>Rayleigh</b> Limit of Aberration . . . . .	234
8.13. Accuracy of Measurements with Mirror and Scale . . . . .	234
E XAMPLES                    [8(iv)-8(xi)] . . . . .	235
8.14. Development of the Theory of <b>Resolving</b> Power . . . . .	236
8.18. Resolving Power of the Fabry-Pérot Etalon . . . . .	238
8.19. Resolving Power of a Microscope . . . . .	241
8.20. Resolution with Non-coherent Illumination . . . . .	242
<b>8.21</b> Abbe Theory of Resolution with Coherent Illumination . . . . .	242

	<b>Page</b>
8.26. Representation of Detail in an Object seen through a Microscope	- 248
8.29. Phase-contrast Microscope	- 251
8.31. Optimum Magnification	- 253
8.32. Purity of a Spectrum obtained with White Light	- 253
8.36. Talbot's Bands	- 255
EXAMPLES [8(xi)-8(xv)]	- 258
REFERENCES	- 259

## CHAPTER IX

## MEASUREMENTS WITH INTERFEROMETERS

9.2. Classification by Type of Interference	- 260
9.4. Classification of Uses of Interferometer	- 261
9.5. The Testing of Optical Components	- 261
9.6. The Twyman-Green Interferometer	- 263
9.11. Fizeau Method	2 6 6
9.15. Multiple-beam Fringes	268
9.16. Testing of Mechanical Gauges	- 269
EXAMPLES [9(i)-9(vii)]	270
9.18. The Double Interferometer	- 272
9.20. Measurement of Mechanical Displacements	- 273
9.21. Measurement of Refractive Index and of Small Differences of Index	- 275
9.29. The Jamin Refractometer	- 279
EXAMPLES [9(viii)-9(xiii)]	- 280
9.30. Measurement of Wavelength	- 281
9.31. Comparison of Wavelengths by Coincidences	- 282
9.32. Comparison of Wavelengths by Exact Fractions	- 283
EXAMPLES [9(xiv)-9(xvii)]	- 286
9.38. Comparison between Optical and Mechanical Standards of Length	- 287
9.44. Recent Work on Standards of Length	- 290
9.50. Investigation of Hyperfine Structure	- 295
REFERENCES	- 298

## CHAPTER X

## THE VELOCITY OF LIGHT

	<b>Page</b>
10.1. Historical	299
10.2. General Review of Methods	299
10.3. Indirect Methods	300
10.5. Romer's Method	300
10.6. Fizeau's Method	301
10.7. Rotating-mirror Method	302
10.11. The Kerr Cell Optical-shutter Method	305
10.12. Discussion of Results	307
10.13. Group Velocity or Wave Velocity	308
10.15. Recent Work	309
10.18. Variation of Velocity with Refractive Index	310
E XAMPLES [10(i)-10(v)]	312
R EFERENCES	312

## CHAPTER XI

## RELATIVISTIC OPTICS

11.1. Introduction	313
11.2. Relative Velocity of Earth and Aether	313
11.4. The Michelson-Morley Experiment	315
11.7. The FitzGerald-Lorentz Contraction	318
11.8. Special Theory of Relativity	319
11.12. Dilation of Time and Contraction of Space	322
11.14. Experiments in which Source and Observer are in Relative Motion	<b>326</b>
E XAMPLES [11(i)-11(v)]	328
11.15. Radial Doppler Effect	329
11.16. Transverse Doppler Effect-Dilation of Time	329
E XAMPLES [11(vi) and 11(vii)]	330
11.18. Reflection of Light by a Moving Mirror	331
E XAMPLES [11(viii)-11(x)]	332
11.19. Aberration Experiments	333
11.20. Experiments with a Moving Medium	333

## CONTENTS

xv

	Page
11.21. General Theory of Relativity . . . . .	335
11.23. Refraction of Light Rays in a Gravitational Field . . . . .	335
11.24. Displacement of Lines in a Gravitational Field . . . . .	336
11.25. Interference in a Rotating System . . . . .	337
EXAMPLE 11(xi) . . . . .	338
11.29. The Nebular Red-shift . . . . .	340
11.32. Relation between Mass and Energy . . . . .	341
11.34. Mass, Momentum and Energy of the Photon . . . . .	343
REFERENCES . . . . .	344

## CHAPTER XII

### POLARIZED LIGHT

12.1. Scalar and Vector Wave Theories . . . . .	345
12.2. The Experiment of Malus . . . . .	346
12.3. Definition of the Plane of Polarization . . . . .	347
12.4. Brewster's Law . . . . .	348
12.5. Polarization by Transmission . . . . .	348
12.6. Double Refraction . . . . .	349
12.10. Malus' Law . . . . .	354
12.11. Methods of producing Plane-polarized Light . . . . .	355
12.12. Nicol, Foucault, and Glan-Thompson Prisms . . . . .	355
12.13. Polarization by Absorption . . . . .	356
12.14. Uses of Polarizing Devices . . . . .	357
12.15. Interaction of Beams of Plane-polarized Light . . . . .	358
12.18. Circularly Polarized Light and Elliptically Polarized Light . . . . .	360
EXAMPLES [12(i)-12(vi)] . . . . .	364
12.20. Huygens' Wave Surface in Crystals . . . . .	364
12.21. Verification of Huygens' Wave Surface for Uniaxial Crystals . . . . .	366
12.22. Transmission of Plane-polarized Light in a Thin Anisotropic Plate . . . . .	368
12.25. Quarter-wave Plate . . . . .	371
12.26. Two or more Plates in Series . . . . .	372
EXAMPLES [12(vii)-12(xiv)] . . . . .	373
12.27. Analysis of Polarized Light . . . . .	374
12.29. Representation of Unpolarized Light . . . . .	375
EXAMPLES [12(xv) and 12(xvi)] . . . . .	377
12.33. The Babinet Compensator . . . . .	377

	<b>Page</b>
12.35. Rotatory Polarization . . . . .	380
12.38. Dispersion of Birefringence and Optical Rotation . . . . .	383
E XAMPLES [12(xvii)-12(xxi)] . . . . .	384
12.44. The Biquartz . . . . .	387
12.45. Saccharimetry . . . . .	388
12.48. Light Beats . . . . .	389

17.38. The Life of an Excited Atom . . . . .	573
17.39. Direct Measurement of $\tau$ . . . . .	574
17.40. Relation between $f$ -Value and $\tau$ . . . . .	575
17.42. Relation between Natural Line Breadth and Transition Probability .	577
17.43. Calculation of Transition Probability . . . . .	577
<b>EXAMPLES</b> [17(ii)–17(x)] . . . . .	578
<b>APPENDIX</b> XVIIIA-Theory of the Compton Effect . . . . .	579
<b>R</b> EFERENCES . . . . .	580

CHAPTER XVIII

QUANTUM THEORY OF RADIATION

	Page
18.1. Relation between Theory of Radiation and Theory of Atomic Structure	581
18.2. Diffraction of Electrons	582
<b>E X A M P L E S</b> [18(i)-18(v)]	582
18.4. The Uncertainty Principle-Particle Dynamics	583
18.6. The Uncertainty Principle-Wave Theory	586
18.7. The Uncertainty Principle-Energy-Time Relations	587
18.8. Indeterminism	588
18.9. The Wave Mechanics	589
18.14. Application of the Wave Equation to Free Particles	593
18.16. The Simple Harmonic Oscillator	595
18.17. Rules of Interpretation	597
18.18. Completion of the Wave Equation	597
18.21. Transition Probabilities	599
18.22. Relation between Classical and Quantum Oscillators	601
18.25. Quantization of the Electromagnetic Field	604
18.29. Analysis of the Momentum of the Field	609
18.30. Indeterminism in Relation to the Wave Equation	610
18.32. The Quantum State	612
18.33. Quantum Statistics	613
18.40. The Relation between Photons and Material Particles	617
<b>R E F E R E N C E S</b>	619

CHAPTER XIX

INTERACTION PROCESSES IN RELATION  
TO QUANTUM MECHANICS

19.1. Absorption and Emission of Radiation	620
19.4. Selection Rule	622
19.5. Forbidden Lines	623
19.7. Multipole Radiation	624
