

# Table of Contents

## Chapter I

### Applications of Gibbs Energy-Composition Diagrams

Mats Hillert, Royal Institute of Technology, Stockholm, Sweden

Introduction .....	1
Notations .....	2
Derivation of the Tie-Line Rule .....	2
Significance of intersections with Component Axes .....	4
Change in a Molar Quantity when a Second Phase is Dissolved .....	6
Use of the Curvature .....	7
Internal Stability .....	8
Mathematical Representation of a Gm Curve .....	8
Fluctuations .....	10
Driving Force for Diffusion .....	12
Calculation of Two-Phase Equilibria .....	13
Calculation for Fixed Compositions .....	15
Driving Force for Precipitation .....	16
Effect of Surface Tension on Two-Phase Equilibria .....	18
Effect of Surface Tension on Composition of Particle .....	20
Nucleation in a Binary System .....	23
Segregation to Grain Boundaries .....	25
Gibbs' Adsorption Equation .....	27
Strong Segregation .....	28
Dissipation of Gibbs Energy .....	29
Interface-Controlled Reactions .....	31
Martensitic Transformation .....	32
Massive Transformation .....	32
Summary .....	33

## Chapter II

### Influence of Elastic Stress on Phase Transformations

William C. Johnson, Department of Materials Science and Engineering,  
University of Virginia, Charlottesville, Virginia, U.S.A.

Introduction .....	35
Basics .....	37
Introduction to Tensors .....	40
Elastic Deformation .....	45
Strain .....	47
Lagrangian Strain Tensor .....	47
Small Strain Tensor .....	49

Volume Change-Dilatation .....	51
Stress .....	52
Mechanical Equilibrium and Elastic Work.....	54
Constitutive Equations .....	56
Misfit Strain .....	61
Thermal Strain .....	62
Compositional Strain.....	63
Eshelby's Misfitting Sphere.....	64
Thermodynamics of Stressed Systems .....	70
Thermodynamic Framework.....	70
Single-Phase System .....	73
Stress-Dependence of Diffusion Potential.. .....	76
Example 1: Stress-Induced Composition Change.....	79
Example 2: Stress-Induced Solute Redistribution .....	81
Two-Phase Equilibria .....	84
Phase Equilibria .....	89
Thermodynamic Relationships .....	91
Thermodynamic Fields and Densities.. .....	91
Field Diagrams and Phase Diagrams .....	92
Phase Rule .....	93
Common-Tangent Construction .....	94
Example: Parallel Plates.....	96
Displacement Boundary Conditions.. .....	98
Traction Boundary Conditions .....	102
Microstructural Evolution .....	108
Stress-Induced Precipitate Shape Transitions.. .....	110
Crystal Symmetry and Neumann's Principle.....	110
Elastic and <b>Interfacial Energies</b> .....	112
Symmetry-Conserving Shape Transitions .....	113
Symmetry-Breaking Shape Transitions .....	116
External Stress Field: Breaking the Bifurcation.. .....	119
Precipitate Splitting .....	121
Elastic Interactions During Coarsening .....	123
Influence of Precipitate Misfit Strain.....	123
Influence of Applied Stress .....	126
Appendix: Thermodynamic Perturbations at a Coherent Interface ....	<b>128</b>

## Chapter III

### Theory of Capillarity

Rohit K. Trivedi, Ames Laboratory, Department of Science and Engineering, Iowa State University, Ames Iowa, U.S.A.

Definition of an Interface .....	135
Sharp Interface.....	136
Diffuse Interface .....	138
Interfacial Energy .....	140

Thermodynamic Definition .....	140
Surface Excess .....	141
Surface Tension .....	142
The Effect of Temperature and Composition on Inter-facial Energy.....	144
Equilibrium Conditions for a Curved Interface .....	146
<b>Laplace</b> Equation .....	147
Chemical Potential at a Curved Interface .....	148
Equilibrium Conditions Between the Two Phases in One-Component System .....	148
Equilibrium Conditions Between the Two Phases in an n-Component System .....	150
Capillarity Effects in Solids .....	154
Surface Energy and Surface Stress .....	154
Anisotropy of Surface Energy.....	157
Equilibrium Between Two Phases .....	158
Chemical Potential at a Faceted Interface.....	160
Equilibrium Shape of a Crystal .....	161
Appendix .....	164

## Chapter I V

### Thermodynamic Kinetic Equations of Solid→Solid Nucleation Theory and Comparisons with Experimental Observations

Hubert I. Aaronson\* and Jong K. Lee\*\*, \*Department of Materials Science and Engineering, Carnegie Mellon University, Pittsburgh, Pennsylvania, U.S.A.; \*\*Department of Metallurgical and Materials Engineering, Michigan Technological University, Houghton, Michigan, U.S.A.

Introduction .....	165
Development of the Nucleation Rate Equations.....	168
Derivation of the Metastable Equilibrium Cluster Concentration .....	168
Derivation of the Steady State Nucleation Rate .....	169
Time-Dependent Nucleation Rate and an Introduction to Time-Reversal .....	173
$\beta^*$ , The Frequency Factor .....	176
D, the Diffusivity .....	177
N, the Nucleation Site Density.....	178
Influence of Critical Nucleus Shape upon Nucleation Kinetics .....	178
The Equilibrium Shape Problem.....	178
Calculation of $\Delta F^*$ .....	180
For Homogeneous Nucleation in the Absence of Crystallography .....	180
For Homogeneous Nucleation in the Absence of Crystallography-Non-Classical Theory.....	182
For Homogeneous Nucleation in the Presence	

of Crystallography .....	188
Grain Boundary Nucleation in the Absence of Crystallography .....	191
Grain Boundary Nucleation in the Presence of Crystallography .....	192
Nucleation at Dislocations .....	194
Calculation of the Geometrical Portion of $\Delta F^*$ .....	195
Calculation of Z and $\tau$ ; Further Application of Time Reversal ..	196
The Ancillary Parameters .....	199
Dilatational $\Delta F_{el}$ for Incoherent Ellipsoidal Precipitates with Isotropic Homogeneous Elasticity .....	205
Dilatational $\Delta F_{el}$ for Coherent Ellipsoidal Precipitates with Isotropic Homogeneous Elasticity .....	206
Dilatational $\Delta F_{el}$ for Coherent Ellipsoidal Precipitates with Isotropic Heterogeneous Elasticity .....	207
Shear $\Delta F_{el}$ for Incoherent Ellipsoidal Precipitates with Isotropic Homogeneous Elasticity .....	208
Combined $\Delta F_{el}$ and $\gamma_{\alpha\beta}$ Minimization .....	209
Bifurcation of Critical Nucleus Shape Under the Combined Influence of $\Delta F_{el}$ and $\gamma_{\alpha\beta}$ Minimization ..	211
Comparisons of Theory and Experiment .....	215
Introduction .....	215
Quantitative Comparisons of Homogeneous Nucleation Theory and Experiment .....	216
Quantitative Comparison of the Theory of Nucleation at Dislocations with Experiment .....	221
Qualitative Comparisons of Nucleation Theory with Experiment .....	223
Concluding Remarks .....	225

## Chapter V

### Moving Phase Boundary Problems

Robert F. Sekerka and Shun-Lien Wang, Carnegie Mellon  
University, Pittsburgh, Pennsylvania, U.S.A.

Introduction .....	231
Formalism .....	232
General Description of Diffusion .....	232
Multiphase Diffusion .....	239
Analytical Solutions to Planar Problems .....	243
Infinite Extent Planar Problems .....	244
Semi-Infinite Extent Planar Problems .....	248
Planar Boundary Motion Following Quenching .....	252
Numerical Methods for Solution of Planar Problems .....	254
Finite Geometries .....	254
Finite Difference Techniques .....	255
Expanding and Contracting Coordinate Systems .....	257

Concentration-Dependent Interdiffusion Coefficients.. .....	258
Analytical Solutions to Non-Planar Problems .....	259
Nonplanar Models.. .....	259
Similarity Solutions and the Method of Ivantsov .....	<b>261</b>
Uniformly Translating Solutions.....	263
Solutions with Similarity Variable Depending on $\sqrt{t}$ .....	266
Solutions with Similarity Variable Depending on $\sqrt{\tau-t}$ .....	273
Discussion and Limitations .....	276
