PREFACE ix

1. INTRODUCTION 1

1.1 Taylor's Theory of Plasma Relaxation 2

1.2 The Underlying Physics of Plasma Relaxation 6

1.3 Toroidal Systems and the RFP 9

1.4 Overview of the Remainder of the Book 12

2. THE RESISTIVE MAGNETOHYDRODYNAMIC MODEL 15

2.1 Resistive Magnetohydrodynamics 15

The Physical Model 15

The Evolution of the Fluid 17

The Evolution of the Electromagnetic Fields 21

Characteristic Oscillations; Normal Modes 22

Dimensionless Variables; the Lundquist Number 25

2.2 MHD Stability 26

Linear Stability of Normal Modes 26

Magnetic Shear and Singular Surfaces 28

Toroidal Pinch Configurations 29

Resistive Instabilities 31

Nonlinear Effects 37

2.3 Stability Properties of the RFP 39

2.4 The Force Free MHD Model 42

2.5 The Role of Numerical Simulation 43

3. TAYLOR'S THEORY OF PLASMA RELAXATION 47

3.1 The Constraints of Ideal MHD 48

The Woltjer Constraints 48

The Topological *Properties* of *the Woltjer Constraints* 50

3.2 Energy Minimization with the Constraints of Ideal MHD 51

3.3 The Effect of Plasma Resistivity 53
Taylor's Conjecture 53
3.4 Energy Minimization with the Global Helicity Constraint 54
Validity of Taylor's Conjecture 55
Properly Defined Helicity 57
The Role of Plasma Pressure in Taylor's Theory 58
3.5 Predictions of the Theory 58
The Reversed-Field Pinch 58
Summary of RFP Predictions 61
The Multipinch Experiment 62
3.6 Discussion 63

4. PHENOMENOLOGY OF RELAXATION IN THE REVERSED-FIELD PINCH 67

4.1 Mean Field Profiles 68
4.2 The Stability of Relaxed States 74
4.3 Resistive Diffusion 82
4.4 The Phenomenological Cyclical Model 87
4.5 Experimental Observations of Relaxation Phenomena in the RFP 88

5. THE DYNAMICS OF PLASMA RELAXATION 95

5.1 Classical Dynamo Theory 96
Kinematic Dynamos 97
Cowling's Theorem 99
The Turbulent Dynamo 101
Relevance to the RFP Dynamo 102
5.2 The Basic Relaxation Mechanism 104
The Original Work of Sykes and Wesson 104
Spontaneous and Driven Reconnection in the RFP 106
Fluctuations and Ohm's Law 110
Evidence of Taylor Relaxation 111

The Helical Ohmic State.. 113
5.3 Effects of Nonlinear Mode Coupling 115
MHD Fluctuations 115
Nonlinear Mode Coupling.. 118
5.4 Summary.. 126

6. PRACTICAL ISSUES RELATED TO RELAXATION 129

6.1 Anomalous Loop Voltage.. 130
Perfectly Conducting Outer Boundary 130
Operation with Resistive Walls and Limiters.. 130
Helicity Balance.. 138
6.2 Taming the Dynamo; An Application of the Theory.. 139

7. RELAXATION AND THERMAL TRANSPORT 143

7.1 A Model for Sawtooth Oscillations in the RFP 144
Experimental Observations 144
Theoretical Interpretation of the Sawtooth Crash.. 145
7.2 Thermal Transport During Sawtooth Oscillations 148
Energy Confinement Time 148
Modifications to the Resistive MHD Model.. 149
Simulation of Sawtooth Oscillations 150
7.3 Summary.. 154

8. DYNAMICAL RELAXATION IN THE SOLAR CORONA.. 155

8.1 Overview of Coronal Dynamics.. 155
8.2 Magnetic Arcade Evolution.. 157
8.3 Coronal Current Filaments.. 163
8.4 An Analogy Between the Solar Corona and the RFP 170

9. SUMMARY.. 171

9.1 Relaxation in the Reversed-field Pinch 172
9.2 Relaxation and Transport 174
9.3 Relaxation in the Solar Corona 175

9.4 Critique 175
To what extent can the numerical simulations be believed? 176
What about analytic theory? 176
What is the role of turbulence? 176
Are pressure driven modes important? 177
Are there non-MHD effects? 177
What is the future of relaxation studies? 177
