

## CONTENTS

<b>Chapter 1</b>	<b>OVERVIEW OF DEFECT PROCESSES INDUCED BY ELECTRONIC EXCITATION IN INSULATORS</b> <i>N. Itoh</i>	
1	Introduction	1
2	Electron-lattice Interaction — Formation of Self-trapped Excitons	2
3	Processes Related to the Self-trapped Excitons	6
4	Experimental Techniques for Studying Defect Processes	7
5	A Brief Description of the Content of the Following Chapters	8
6	Summary	9
<b>Chapter 2</b>	<b>EXCITONIC MECHANISM OF DEFECT FORMATION IN ALKALI HALIDES AS SPONTANEOUS SYMMETRY BREAKING</b> <i>Y. Kayanuma</i>	
1	Introduction	13
2	Self-trapping of Excitons	16
	2.1 Self-trapping as a point particle	16
	2.2 Self-trapping as a composite particle	18
3	STE Spectroscopy and F-center Formation: The Puzzles:	19
4	Adiabatic Instability in the Excited State	25
5	The Off-center Model	32
	5.1 The STE spectroscopy	36
	5.2 The F-center formation	42
6	Concluding Remarks	47
<b>Chapter 3</b>	<b>LUMINESCENCE AND SELF-TRAPPING OF EXCITONS IN ALKALI HALIDES</b> <i>H. Nishimura</i>	
1	Introduction	56
2	Optical Transitions to Several Exciton States	57
3	Luminescence of $1s$ Free Excitons	60
4	Shapes of Free Exciton Luminescence in $\text{NaI}$	62
5	Luminescence of $1s$ Free Excitons in Other Alkali Iodides	66
6	Thermal Broadening of Free Exciton Luminescence	69
7	Resonance Raman Scattering	71
8	Excitation Spectra of Free Exciton Luminescence in $\text{NaI}$	74
9	Temperature Dependence of Intensities of Free-exciton Luminescence	76
10	Luminescence of $2s$ Free Excitons	81
11	Energy Relaxation of $1s$ and $2s$ Free Excitons	83

12.	Oscillatory Structures in Excitation Spectra due to Hot Excitons	86
13.	Optical Transitions to Exciton-LO-phonon Coupled States	93
14.	Kinetics of Free and Self-trapped Excitons in NaI	103
15.	Two Types of $\pi$ Luminescence Bands in Alkali Halides	108
16.	$E_x$ (3.0 eV) Luminescence in KI	111
Chapter 4.	TIME-RESOLVED STUDIES OF PHOTOCHEMISTRY IN ALKALI HALIDES <i>M. Hirai</i>	
1.	Introduction	120
1.1	Color centers and excitons	121
2.	Studies in Microsecond ( $\mu$ s) and Nanosecond (ns) Ranges	127
2.1	Correlation between the $\pi$ luminescence and F center formation	128
3.	Studies in ps Range	130
3.1	Formation of holes, electrons and excitons	130
3.2	Formation of trapped holes	131
3.3	Formation of STE	132
3.4	Formation of [F+H] pairs	144
3.5	[F+H] formation mechanism proposed by Williams et al.	166
3.6	Relaxation mechanism of STE proposed by Itoh et al.	168
4.	Time Resolved Spectroscopy by Double Excitation in Picosecond Range	171
5.	Summary	173
Chapter 5.	CASCADE-EXCITATION SPECTROSCOPY FOR RECOMBINATION-INDUCED DEFECT PRODUCTION IN HALIDE CRYSTALS <i>K. Tanimura</i>	
1.	Introduction	178
1.1	Categorization of nonmetallic solids	181
1.2	Self-trapped excitons	183
1.3	Roles of the STE in defect-formation process under valence-electron excitation	187
2.	Cascade-excitation Spectroscopy	189
3.	Relaxation of Electron-excited States of the STE in Alkali Halides	193
3.1	Electronic structures	194
3.2	Relaxation pathways at 2p-excited states	198
3.3	Relaxation pathways at $np(n > 2)$ -excited states	210
3.4	Selective nonradiative transitions	212
4.	Relaxation of Hole-excited States of the STE in Alkali Halides	216
4.1	Relaxation pathways	218
4.2	Competition between de-localization and Auger transition	223

5.	Relaxation of the Host-excited State of the STE in Alkali Halides	224
5.1	Interaction between free <b>excitons</b> and STE's	224
5.2	<b>Exciton</b> fusion	225
5.3	Defect formation through <b>exciton</b> interaction	227
6.	Relaxation of Excited States of the STE in Alkaline Earth Fluorides	229
6.1	Two relaxed configurations of STE's in fluorides	231
6.2	Mutual conversion via electron-excited states of STE's	236
6.3	Defect formation via a hole-excited state of STE's	241
7.	Summary	243
Appendix:	The Rate-equation Model for the <b>Cascade-</b> excitation Spectroscopy	245

**Chapter 6. ATOMIC PROCESSES INDUCED BY ELECTRONIC EXCITATION  
AT SURFACES**  
*N. Itoh*

1.	Introduction	253
2.	Sputtering by Valence Electron Excitation	255
3.	Laser Sputtering	260
4.	Mechanism of Sputtering	264
5.	<b>Conclusion</b>	267
