

# Table of Contents

Chapter 1	<b>GENERAL INTRODUCTION</b> .....	1
	1. Different levels of description .....	1
	2. Elimination of fast variables .....	3
Chapter 2	<b>PROJECTION-OPERATOR FORMALISM</b> .....	9
	1. Introduction .....	9
	2. A lattice-gas model .....	12
	3. One-dimensional escape problems .....	16
	4. Escape in two dimensions. ....	22
	5. Complex chemical reactions .....	24
	6. Ordinary differential equations .....	26
	References .....	27
Chapter 3	<b>KRAMERS' ESCAPE PROBLEM</b> .....	28
	1. Introduction .....	28
	2. Physical picture of the escape process .....	31
	3. Definition of the escape time .....	33
	4. The limit of small fluctuations .....	34
	5. Distinction between well and barrier .....	36
	6. Large damping .....	38
	7. The limit of small damping .....	39
	8. Solution in region I .....	40
	9. Solution in region IV .....	41
	10. Matching of the solutions .....	45
	11. The escape time .....	48
	12. Connection with unimolecular chemical reactions. ....	50
	References .....	52
	Appendices .....	53

Chapter 4	<b>COMPLEX CHEMICAL REACTIONS I</b> .....	59
	1. Introduction .....	59
	2. The formation of hydrogen bromide .....	61
	3. Successive elimination of fast variables .....	64
	4. The reaction between nitric oxide and hydrogen .....	66
	5. The extended Brusselator .....	68
	6. Elimination of fast oscillations .....	70
	7. Relaxation oscillations .....	72
	8. The slow decay of $x_2$ .....	74
	References .....	76
Chapter 5	<b>COMPLEX CHEMICAL REACTIONS II</b> .....	77
	1. Introduction .....	77
	2. Derivation of a reduced master equation .....	79
	3. Nonuniqueness of the projection operator .....	82
	4. Mesoscopic treatment of hydrogen-bromide formation .	83
	5. Macroscopic and mesoscopic time scales. ....	85
	6. Primary elimination .....	85
	7. Secondary elimination .....	87
	8. R-expansion .....	89
	References .....	90
	Appendices .....	91
Chapter 6	<b>COMPLEX CHEMICAL REACTIONS III</b> .....	97
	1. Introduction .....	97
	2. Elimination by means of the R-expansion .....	98
	3. Non-existence of a reduced master equation .....	102
	4. Dissociation of nitrogen pentoxide .....	103
	5. Mesoscopic treatment .....	105
	6. $\Omega$ -expansion .....	106
	References .....	108

Chapter 7	ORDINARY DIFFERENTIAL EQUATIONS I	109
	1. Introduction	109
	2. Linear systems	110
	3. New method	112
	4. Comments	114
	5. Application: survival of Onsager relations	117
	References	120
Chapter 8	ORDINARY DIFFERENTIAL EQUATIONS II	121
	1. Introduction	121
	2. Reduction to the linear case	122
	3. The extraction of slow motion	123
	4. Rapid phase systems	126
	5. The connection between $\sigma$ and the guiding center	129
	6. The evolution of $\bar{\rho}_m(y)$ : diffusion and anti-diffusion	130
	7. Small fluctuation expansion	133
	8. Discussion	136
	References	136
	Appendices	137
Samenvatting		145
Dankwoord		148
Curriculum Vitae		150
