

# CONTENTS

1. INTRODUCTION .....	1
1.1. Background .....	1
1.2. Objective .....	4
1.3. Scope .....	4
1.4. Structure.. .....	7
2. SAFETY OBJECTIVES AND CLASSIFICATION .....	8
2.1. Introduction and examples of NFOPs .....	8
2.2. Safety objectives .....	10
2.3. Defence in depth .....	11
2.4. Safety classification of the facilities .....	12
2.5. Classification of items in relation to external events .....	16
3. GENERAL APPROACH TO THE DESIGN OF NFOP .....	19
3.1. Generalities .....	19
3.2. Safety margin control in the design process .....	19
3.3. Design procedures and safety assessment .....	21
3.4. Ageing effects on design and re-evaluation .....	23
3.5. The special case of research reactors .....	23
4. DESIGN BASIS FOR EXTERNAL EVENTS .....	27
4.1. Introduction .....	27
4.2. Design basis earthquake .....	29
4.2.1. Site specific design response spectra based on instrumental data.....	29
<b>4.2.2. Design response spectra based on historical seismicity .....</b>	<b>29</b>
4.2.3. Design response spectral shapes .....	30
4.3. Design basis for aircraft crash .....	32
4.3.1. General .....	32
4.3.2. Basic data for screening .....	33
4.4. Design basis for wind .....	34
4.4.1. General .....	34
4.4.2. Basic data .....	34
4.5. Design basis for snow .....	35
4.5.1. General .....	35
4.5.2. Basic data .....	35
4.6. Design basis for external temperature .....	35
4.6.1. General .....	35
4.6.2. <b>Basic data .....</b>	<b>36</b>
4.7. Design basis for flood .....	37
4.7.1. General .....	37
4.7.2. Basic data .....	37
4.8. Design basis for external explosion .....	37
4.81. General .....	37
4.82. Basic data .....	38
5. GEOLOGICAL AND GEOTECHNICAL INVESTIGATIONS .....	38
5.1. Generalities .....	38
5.2. Liquefaction potential .....	40

6. BUILDING DESIGN .....	40
6.1. Seismic design .....	40
6.1.1. Layout considerations .....	40
6.1.2. Design classes for structures .....	41
6.1.3. Geometric modelling .....	41
6.1.4. Soil structure interaction .....	43
6.1.5. Non-structural loads .....	44
6.1.6. Spectral analysis .....	45
6.1.7. Simplified dynamic approach .....	47
6.1.8. Earthquake induced element forces .....	49
6.1.9. Load combination and acceptance criteria .....	50
6.2. Aircraft crash .....	51
6.2.1. Protection strategies .....	51
6.2.2. Local design .....	51
6.2.3. Global design .....	52
6.2.4. Load combination and acceptance criteria .....	52
6.3. Wind .....	53
6.3.1. Load combination and acceptance criteria for extreme wind .....	53
6.3.2. Load combination and acceptance criteria for frequent wind .....	53
6.4. Snow .....	54
6.4.1. Load combination and acceptance criteria .....	54
6.5. External temperature .....	55
6.5.1. Layout consideration .....	55
6.5.2. Load combination and acceptance criteria .....	55
6.6. External flood .....	56
6.6.1. Layout consideration .....	56
6.6.2. Load combination and acceptance criteria .....	56
6.7. External explosion .....	56
6.7.1. Layout consideration .....	56
6.7.2. Load combination and acceptance criteria .....	57
7. EQUIPMENT AND PIPING DESIGN .....	57
7.1. Introduction .....	57
7.2. Seismic design .....	58
7.2.1. General methodology for seismic force evaluation .....	58
7.2.2. Simplified analytical evaluation of floor response spectra .....	59
7.2.3. Seismic design of containers .....	60
7.2.4. Seismic design of pumps and valves .....	60
7.2.5. Seismic design of equipment and piping .....	61
7.2.6. Other considerations .....	61
7.3. Equipment design for aircraft crash loads .....	62
7.4. Anchorage design .....	63
8. SLOSHING EFFECTS .....	64
9. OTHER CONSIDERATIONS .....	65
9.1. Seismic scram system .....	65
9.2. Monitoring systems at the site .....	66
9.3. Quality assurance .....	66

9.4. Evaluation of radioactive exposure to the public during and after external events .....	66
REFERENCES .....	67
APPENDIX I: SIMPLIFIED PROCEDURES FOR ASSESSMENT OF LIQUEFACTION POTENTIAL .....	71
APPENDIX II: SOIL STRUCTURE INTERACTIONS .....	76
