

Contents

Preface	ix
1 Introduction	1
1.1 The Continuum Limit	2
1.2 The Perfect-Gas Law	2
1.3 Surface Tension	2
1.4 Couette Flow in Steady-State Motion I	3
1.5 Couette Flow in Steady-State Motion II	4
1.6 Couette Flow in Transient Motion	5
1.7 Pipe Flow	7
2 Dimensional Analysis	9
2.1 Dimensionless Groupings	10
2.2 Dimensional Homogeneity	10
2.3 Indicial Method	11
2.4 E. S. Taylor’s Method	12
2.5 Dynamic Similitude I	14
2.6 Dynamic Similitude II	15
3 Effects of Gravity on Pressure	17
3.1 Hydrostatic Relation	18
3.2 U. S. Standard Atmosphere	19
3.3 Manometer	20
3.4 Vertical Gate	21
3.5 Tilted Gate-Tilted Coordinate Frame	22
3.6 Tilted Gate-Normal Coordinate Frame	24
3.7 Curved Gate	28
3.8 Superposition	30
3.9 Buoyancy in a Uniform Fluid	32
3.10 Buoyancy in a Dual-Fluid Tank	34
4 Kinematics	35
4.1 Eulerian Description	36
4.2 Lagrangian Description	37
4.3 Vorticity-Rotational Flow	38
4.4 Vorticity—Irrotational Flow	39
4.5 Circulation	40
4.6 Streamlines-Cartesian Coordinates	42

4.7	Streamlines-Cylindrical Coordinates	43
4.8	Surface Fluxes.	44
4.9	Reynolds Transport Theorem I	45
4.10	Reynolds Transport Theorem II	46
5	Conservation of Mass and Momentum	49
5.1	Irrotationality and Incompressibility I	50
5.2	Irrotationality and Incompressibility II	51
5.3	Irrotationality and Incompressibility III	52
5.4	Continuity Equation	52
5.5	Bernoulli's Equation	53
5.6	Bernoulli's Equation-Quasi-Steady Flow	54
5.7	Euler's Equation	55
5.8	Euler's Equation-Rotating Tank	58
5.9	Pitot-Static Tube	59
5.10	Galilean Invariance	60
6	Control Volume Method	63
6.1	Basic Control Volume Concepts	65
6.2	'Mass-Stationary Control Volume I	66
6.3	Mass-Stationary Control Volume II	68
6.4	Mass-Translating Control Volume	69
6.5	Mass-Deforming Control Volume I	71
6.6	Mass-Deforming Control Volume II	72
6.7	Mass-Nonuniform Profiles	74
6.8	Mass and Momentum-Stationary Control Volume I	75
6.9	Mass and Momentum-Stationary Control Volume II	77
6.10	Mass and Momentum-Translating Control Volume	80
6.11	Mass and Momentum-Rotational Flow	82
6.12	Mass and Momentum-Irrotational Flow	85
6.13	Mass and Momentum-Nonuniform Profiles	88
6.14	Mass and Momentum-Accelerating Control Volume	90
6.15	Mass and Momentum-Three-Dimensional Flow	93
7	Conservation of Energy	97
7.1	Thermodynamics	98
7.2	Energy-Integral Form	100
7.3	Energy-Differential Form	102
7.4	Moody Diagram	104
7.5	Flow Through a Turbine	105
7.6	Minor Losses I	106
7.7	Minor Losses II	108
7.8	Pipe System	109
7.9	Free-Surface Waves	111
7.10	Open-Channel Flow I	111
7.11	Open-Channel Flow II	113
7.12	Hydraulic Jump	115

8 One-Dimensional Compressible Flow	117
8.1 Speed of Sound	118
8.2 Isentropic Flow I	119
8.3 Isentropic Flow II	119
8.4 Normal Shock I	121
8.5 Normal Shock II	122
8.6 Laval Nozzle I	123
8.7 Laval Nozzle II	124
9 Turbomachinery	127
9.1 Pump Analysis	128
9.2 Performance Curves.	129
9.3 Power	131
9.4 Turbine Analysis	133
9.5 Pelton Wheel	134
10 Vorticity and Viscosity	137
10.1 The Vorticity Equation	138
10.2 Circulation.	139
10.3 Vorticity in a Boundary Layer	140
10.4 Drag.	142
10.5 Lift.	143
11 Potential Flow	145
11.1 Basic Concepts-Cartesian Coordinates	146
11.2 Basic Concepts-Cylindrical Coordinates	147
11.3 Computing ψ from a Given ϕ	148
11.4 Computing ϕ from a Given ψ	149
11.5 Bernoulli's Equation	150
11.6 Superposition of Fundamental Solutions I	151
11.7 Superposition of Fundamental Solutions II	152
11.8 Flow Past a Rotating Cylinder I	153
11.9 Flow Past a Rotating Cylinder II	155
11.10 Unsteady Potential Flow	156
11.11 Linearized Airfoil Theory.	156
11.12 CFD-Richardson Extrapolation	159
12 Viscous Effects	161
12.1 Kinematics	162
12.2 Strain-Rate Tensor	163
12.3 Viscous-Stress Tensor	164
12.4 Navier-Stokes Equation	166
12.5 CFD-Stability Analysis	168
13 Navier-Stokes Solutions	169
13.1 Couette Flow	170
13.2 Rotating Channel Flow	171
13.3 Trailing-Vortex Flow	173
13.4 Stokes' Flow with Suction	174
13.5 CFD-Thomas' Algorithm	175

14 Boundary Layers	179
14.1 Boundary-Layer Equations I	180
14.2 Boundary-Layer Equations II	181
14.3 Momentum Integral Equation I	182
14.4 Momentum Integral Equation II	184
14.5 Blasius Solution	186
14.6 Transitional Boundary Layer	187
14.7 Turbulent Boundary Layers	189
14.8 Law of the Wall I.	190
14.9 Law of the Wall II	191
14.10 CFD-Truncation Error	195
15 Viscous and 2-D Compressible Flow	197
15.1 Fanno Flow I	198
15.2 Fanno Flow II.	199
15.3 Rayleigh Flow I	202
15.4 Rayleigh Flow II	203
15.5 Oblique Shock Wave	205
15.6 Reflection of an Oblique Shock Wave	207
15.7 Prandtl-Meyer Expansion I	209
15.8 Prandtl-Meyer Expansion II	210
15.9 Compressible Law of the Wall	211
15.10 CFD-Numerical Dissipation and Dispersion	2 13
A Fluid Properties	215
A.1 Perfect-Gas Properties	2 15
A.2 Pressure	215
A.3 Density	216
A.4 Compressibility and Speed of Sound	216
A.5 Viscosity..	217
A.6 Surface Tension	218
B Hydraulics Properties	219
B.1 Fluid Statics.	219
B.2 Open-Channel Flow	220
B.3 Pipe Flow	222
C Compressible-Flow Properties	227
C.1 Isentropic Flow and Normal-Shock Relations	227
C.2 Prandtl-Meyer Function and Mach Angle	235
c.3 Fanno Flow	237
C.4 Rayleigh Flow	240
D Drag Data	243
E Conversion Factors	245
