

Contents

<i>Section 0</i>		1
	A. Algebra	1
	B. Functions of Operators	9
	C. Analysis	12
	D. Topology	12
	E. Topological Groups	19
<i>Part I.</i>	Lie Groups and Their Lie Algebras	20
	1. Manifolds	20
	2. Lie Groups: Local and Global Properties	37
	3. The Lie Algebra	47
	4. The Exponential Function	59
	5. The Campbell-Baker-Hausdorff Theorem	65
	6. Subgroups and Sub-algebras	72
	7. Important examples-the classical matrix groups	81
<i>Part II.</i>	Complex Semi-Simple Lie Algebras	86
	1. Basics	86
	2. Cartan's Criterion	93
	3. Structure of Simple Complex Algebras	100
	4. Models of the Simple Complex Algebras	122
	5. Isomorphisms and Automorphisms	138
	6. Representations of Complex Semi-Simple Algebras	142
	7. The radical splitting theorem. Existence of Lie Groups with a given Lie algebra	159

<i>Part III.</i>	Real Semi-Simple Lie Algebras	172
	1. Structure and Representations of Simple Real Algebras	172
	A. Analysis of the conjugations in the Lie Algebra of type A_{n-1}	184
	B. Analysis of the conjugations in the Lie Algebra of types B_m , C_m and D_m	188
	A'. Analysis of the conjugations in the Lie Algebra of type G_2	201
	B'. Analysis of the conjugations in the Lie Algebra of type E_8	202
	C'. Analysis of the conjugations in the Lie Algebra of type E_7	205
	D'. Analysis of the conjugations in the Lie Algebra of type E_6	207
	E'. Analysis of the conjugations in the Lie Algebra of type F_4	213
	2. Compact Connected Lie Groups	220
