

Contents

Chapter 1	Introduction to Rotational Moulding	
	R.J.Crawford	1
1.	Introduction	1
2.	Materials	4
3.	Rotational moulding machines	12
4.	Moulds	15
5.	General design procedures for plastics	17
	References	29
	Abbreviations	31
Chapter 2	Rotational Moulding of Polyethylene	
	R.I.Kliene	32
1.	History of development	32
2.	Polyethylene properties	34
3.	Polyethylene powders	39
4.	Polyethylene additives	48
5.	Polyethylene processing	56
6.	Applications	60
	References	60
Chapter 3	Rotational Moulding of Nylons	
	F. Petruccelli	62
1.	Introduction and chemistry	62
2.	Manufacture of nylon resins	64
3.	Compounding	67
4.	Processing	69
5.	Properties of moulded nylons	86
6.	Finishing and machining of nylons	9s
1.	Nylon applications	97
	References	99

Chapter 4	Rotational Moulding Machines	
	W.H.Covington, Jr	100
1.	Introduction	100
2.	The rotation process	100
3.	Rock and roll machines	106
4.	Box oven machines	106
5.	Shuttle-style machines	109
6.	Clamshell machines	109
7.	Vertical style machines	110
8.	Fixed-arm turret machines	113
9.	The independent-arm machine	114
Chapter 5	Sheet Metal Moulds	
	T.J.Taylor	118
1.	Introduction	118
2.	Tool construction and design	122
3.	Surface finish	134
4.	Special features	135
5.	Venting	139
6.	Mounting	140
7.	Maintenance	142
Chapter 6	Cast Aluminium Moulds	
	S.Scaccia	143
1.	History	143
2.	Product design	143
3.	The pattern	144
4.	Mould design	145
5.	Function and operation of mould	149
6.	Maintenance	151
Chapter 7	Design of Rotationally Moulded Products	
	G.L.Beall	153
1.	Designing rotationally moulded plastic products	153
2.	Rotationally moulded plastic part design	158
2.1	Wall thickness	158
2.2	Wall thickness uniformity	159
2.3	Closely spaced parallel walls	160
2.4	Warpage	161
2.5	Stiffening ribs	162
2.6	Kiss-off ribs	164
2.7	Draft angles	167
2.8	Surface finish	168
2.9	Undercuts	169
2.10	Holes	171
2.11	Comer radii	172
2.12	Tolerances	17s

Chapter 8	Design Case Studies	
	G.W.Wassell	178
	1. Introduction	178
	2. Case studies	178
	3. Aspects of design	183
	4. Industrial conminas	191
	5. Conclusion	194
	Acknowledgements	195
Chapter 9	Process Control for Rotational Moulding	
	P.J.Nugent and R.J.Crawford	196
	1. Introduction	196
	2. Principles of process control	196
	3. Control of part properties	204
	4. Processing advantages	207
	5. Machine improvements	213
	6. Quality control	215
	References	216
Chapter 10	Pin-holes and Bubbles in Rotationally Moulded Products	
	A.G. Spence and R.J.Crawford	217
	1. Introduction	217
	2. Bubble formation	217
	3. The effect of the moulding material on bubbles	219
	4. Mould considerations	224
	5. Bubble removal using pressure	228
	6. Effect of pressure and vacuum on the mould	239
	References	241
	Acknowledgements	242
	Disclaimer	242
Chapter 11	Rotational Moulding of Liquid Polymers	
	E.Harkin-Jones and R.J.Crawford	243
	1. Introduction	243
	2. Materials	243
	3. Flow behaviour of liquid polymers in a rotating mould	245
	4. The influence of processing conditions on the wall thickness uniformity and on bubble content of moulded parts	250
	5. Moulding equipment	252
	6. Some recommendations for the rotational moulding of liquid polymers	254
	References	255
