

CONTENTS

Preface	xi
1 Introduction to Systems Simulation	1
1.1 Introduction	1
1.2 Applications of Simulation	2
1.3 Future Potential of Simulation	5
1.4 Plan of the Book	5
1.5 Concluding Remarks	7
2 Systems and Models	9
2.1 Introduction	9
2.2 Systems	9
2.2.1 Classification of Systems	12
2.2.2 Common Dynamic Systems Concepts	15
2.3 Models	27
2.3.1 Classification of Models	30
2.3.2 Model Experimentation	31
2.3.3 Some Remarks for Selection of a Modeling Method	35
2.3.4 Simulation-An Experimental Approach	36
2.4 Summary	37
2.5 Exercises	37
3 Simulation	39
3.1 Introduction	39
3.2 A Demonstrative Example of Simulation	40
3.3 A Numerical Example	42
3.4 Computer Representation of Simulation Models	46
3.4.1 Creation of Random Effects by Computer	47
3.4.2 Representation of Model Logics by Computer Programs	48
3.4.3 General Structure of Simulation Programs	57
3.5 Statistics in Simulation	58
3.6 Simulation Software Tools	61
3.7 EZSIM - A General Purpose Discrete System Simulation Tool	63
3.7.1 Procedure for Using EZSIM	64
3.7.2 EZSIM Program Generator Mode	73
3.7.3 Some Design Considerations	76
3.7.4 Demonstration of the EZSIM Application Procedure	76

3.8	The Simulation Process	81
3.9	Summary	83
3.10	Exercises	83
4	Common Processes in Discrete Systems	87
4.1	Introduction	87
4.2	A View of Common Processes in Discrete Systems	88
4.2.1	Entity Movement	89
4.2.2	Entity Multiplication and Reduction	92
4.2.3	Entity Use of Resources	95
4.2.4	Entity Accumulation	98
4.2.5	Auxiliary Operations	101
4.3	Summary	106
4.4	Exercises	106
5	EZSIM Modeling Objects and Capabilities	107
5.1	Introduction	107
5.2	SOURCE Node	107
5.3	TERMINATE Node	108
5.4	DELAY Node	108
5.5	FACILITY Node	109
5.6	QUEUE Node	110
5.7	ASSIGN Node	113
5.8	RESOURCE-Q Node	121
5.9	GATE-Q Node	122
5.10	SWITCH Node	122
5.11	MATCH-Q Node	122
5.12	GROUP-Q Node	122
5.13	UNGROUP Node	130
5.14	FILE Node	131
5.15	Summary	133
5.16	Exercises	133
6	Analysis of Simulation Inputs and Creation of Their Effects	133
6.1	Introduction	133
6.2	Random Effects in Simulation	133
6.3	Identifying the Distribution of Field Data	133
6.3.1	Goodness-of-Fit Tests	141
6.3.2	Selection of Distribution in the Absence of Field Data	141
6.4	Random Number Generation	141
6.4.1	Pseudorandom Number Generation Techniques	141
6.4.2	Methods for Testing Random Numbers	151
6.5	Random Variate Generation	151
6.5.1	Generation of Random Variates with Arbitrary Distributions	151
6.5.2	Other Methods for Random Variate Generation	161

6.6	Summary	163
6.7	Exercises	163
6.8	References and Further Reading	166
7	Analysis of Simulation Output	167
7.1	Introduction	167
7.2	The Importance of Simulation Output Analysis	168
7.3	Types of Simulation with Respect to Output Analysis	170
7.3.1	Nonterminating Systems	170
7.3.2	Terminating Systems	175
7.4	Problem of Data Dependency or Autocorrelation	181
7.5	Confidence Intervals	182
7.5.1	Estimation of Population Mean	183
7.5.2	Estimation of Proportion	188
7.5.3	Estimation of Difference between Means	191
7.6	Selection of Sample Size	194
7.6.1	Sample Size Based on Population Mean	194
7.6.2	Sample Size Based on Proportion	196
7.6.3	Sample Size Based on Difference between Means	197
7.7	Test of Hypothesis	198
7.8	The Independent Replications Method	200
7.9	The Batch Means Method	203
7.9.1	Runs Up and Down Test	204
7.10	Variance Reduction Techniques	206
7.11	Other Stages in the Simulation Process	207
7.11.1	Verification	207
7.11.2	Validation	211
7.11.3	Experimentation	214
7.11.4	Documentation	216
7.12	Summary	217
7.13	Exercises	217
7.14	References and Further Reading	221
8	Applications of Simulation	223
8.1	Introduction	223
8.2	Application Examples in the Service Industries	226
8.2.1	Communication Systems	242
8.3	Application Examples in Manufacturing	248
8.3.1	Production and Inventory Control	260
8.3.2	Manufacturing Quality Control	263
8.4	Summary	266
8.5	Exercises	267
9	Simulation Tools and the Criteria for Their Selection	275
9.1	Introduction	275
9.2	General Purpose Event-Oriented Simulation Languages	276
9.2.1	GASP IV	276

9.2.2	SIMSCRIPT	276
9.2.3	MODS 1M	277
9.3	General Purpose Process-Oriented Languages	277
9.3.1	SLAM	278
9.3.2	GPSS	280
9.3.3	SIMAN	282
9.3.4	SIM-ii	284
9.4	Special Purpose Simulation Environments	284
9.5	Selection of a Simulation 11001	286
9.6	Summary	288
10	Future Directions of Simulation	289
10.1	Introduction	289
10.2	Intelligent Simulation Environments	290
10.2.1	Machine Learning and Simulation	293
10.3	Object-Oriented Simulation	294
10.3.1	Advantages of Object-Oriented Simulation	296
10.4	Projections for Future Advancements in Simulation	297
10.5	Summary	298
10.6	References and Further Reading	298
	Appendixes	301
A	Program Listings for the Single-Server Queuing System	301
B	Probability Distributions	311
C	A Histogram Program	323
D	Statistical Tables	325
	Index	331
