

CONTENTS

List of Figures	xiv
List of Tables	xvi

1 Introduction	1
2 Survey of Ultrahigh Energy Cosmic Rays	4
2.1 Introduction	4
2.2 Present Knowledge of Cosmic Rays	5
2.2.1 Chemical Composition	6
2.2.2 Spectrum	7
2.3 Candidate Sources	9
2.4 Acceleration Models	10
2.5 Propagation	11
2.6 Direct Measurement Techniques	14
2.7 Indirect Detection Through EAS	15
2.7.1 Ground Array Experiments	16
2.7.2 Atmospheric Light Emission Experiments	17
Bibliography	18

3 The Extensive Air Shower	19
3.1 Introduction	19
3.2 The Electromagnetic Cascade	20
3.3 Electromagnetic Longitudinal Shower Development	21
3.4 Hadronic Shower Development	24
3.5 Modeling Hadronic EAS	25
3.6 The Elongation Rate	27

4.4.1	Haverah Park	40
4.4.2	Yakutsk	44
4.4.3	Akeno	47
4.4.4	Sydney	47

Bibliography		49
---------------------	--	-----------

Experimental Techniques: Cherenkov Light		50
---	--	-----------

5.1	Properties of Cherenkov Radiation	50
5.2	The Angular Distribution of Cherenkov Light	51
5.3	History of Experimental Detection	52
5.4	Primary Particle Energy	54
5.5	Cherenkov Light: The Lateral Distribution	55
5.6	Extraction of Longitudinal Development	56
5.7	The Cherenkov Pulse Shape	58

Bibliography		63
---------------------	--	-----------

Experimental Techniques: Air Fluorescence		65
--	--	-----------

6.1	Introduction	65
6.2	The "Fly's Eye"	66
6.2.1	Signal-To-Noise Considerations	67
6.2.2	Triggering	69
6.2.3	The Event Plane	69
6.2.4	The Time Fit	71
6.2.5	New Stereoscopic Method	72
6.3	Longitudinal Shower Size Determination	74
6.4	Determining the Shower Energy	76
6.5	Undetected Energy Corrections	77
6.6	Calculating the Differential Cosmic Ray Spectrum	78
6.7	Measuring Cherenkov Light Angular Distribution	79

6.8	Proposed Improvements	80
	Bibliography	82
7	The Cosmic Ray Spectrum	84
7.1	Introduction	84
7.2	Age of Galactic Cosmic Rays	85
7.3	The "Leaky Box" Model	86
7.4	Experimental Data Above .1 EeV	87
7.5	Speculation on Cosmic Rays Above 10 EeV	89
7.6	Acceleration Mechanisms	90
7.6.1	Fermi Statistical Acceleration	90
7.6.2	Candidate Statistical Acceleration Regions	92
7.6.3	Direct Acceleration Models	93
7.6.4	Acceleration Models Above 10 EeV	95
	Bibliography	101
8	Anisotropy	103
8.1	Introduction	103
8.2	Experimental Problems	104
8.3	Right Ascension And Declination	104
8.4	Harmonic Analysis	106
8.5	Galactic Coordinates	107
8.6	Ground Array Data	110
8.7	"Fly's Eye" Data	111
	Bibliography	114
9	Composition: Direct Methods	115
9.1	Introduction	115
9.2	The "Low Energy Composition"	116
9.3	Steepening of the Primary Spectrum	116
9.4	The JACEE Experiment	118
9.5	The University of Chicago "Egg"	121
9.6	The UHN Detector	123
9.7	Space Station Experiments	125
	Bibliography	127

10	Composition: Muon and Hadron Detectors	128
10.1	Introduction	128
10.2	Muons in the EAS	128
10.3	The Muon Lateral Distribution	129
10.4	High Energy Muons	130
10.5	The Decoherence Function	131
10.6	Muon Multiplicity Depends on Composition	132
10.7	Composition Determined from Muon Multiplicity	134
10.8	Conflicting Experimental Results	134
10.9	Other Techniques for Studying Composition	137
10.9.1	Delayed Hadron Technique	137
10.9.2	" γ -Ray Family" Technique	138
	Bibliography	141
11	Ultrahigh Energy Cosmic Ray Composition	143
11.1	Introduction	143
11.2	The X_{max} Technique	144
11.3	Cherenkov Experiments at < 10 PeV	145
11.4	Results for > 10 PeV	146
11.5	The "Fly's Eye" Results	147
11.6	Scaling Violation	149
11.7	Future Directions	151
	Bibliography	156
12	The Greisen Cutoff	158
12.1	General Discussion	158
12.2	The Cosmic Ray Spectrum at the Earth	159
12.3	The Associated Neutrino Flux	161
12.4	"Fly's Eye" Detection of the Neutrino Flux	161
12.5	Detection of Neutrino Flux by DUMAND	164
	Bibliography	167
13	The Inelastic Total Cross Section	169
13.1	Introduction	169
13.2	Relation between Inelastic and Total Cross Sections	170
13.3	Measurement Techniques	171
13.3.1	The X_{max} Attenuation Method	171
13.3.2	The Fluctuation Method	175

13.3.3 The Zenith Angle Attenuation Technique	175
13.4 Glauber Model Calculation	177
Bibliography	180
14 Point Sources of γ-Rays	181
14.1 Introduction	181
14.2 Detection of Sources	182
14.3 Cygnus X-3 Observations	183
14.4 The Acceleration Mechanism	189
14.5 Hercules X-1 Observation	191
14.6 Techniques for Increasing Sensitivity	193
14.7 Deep Underground Observations	194
14.8 Implications of Short Term Variability	195
Bibliography	196
15 Appendix: The Atmosphere	198
15.1 EAS Development in the Atmosphere	198
15.1.1 The Troposphere	198
15.1.2 The Isothermal Atmosphere Approximation . . .	199
15.1.3 Atmospheric Slant Depth	200
15.2 Atmospheric Absorption	200
15.2.1 Rayleigh Scattering	200
15.2.2 Aerosol Scattering	201
Bibliography	203
Index	204
