

TABLE OF CONTENTS

Introduction	1
Part I: Thermodynamics	
1. From Liouville to Boltzmann	7
2. The Entropy and its Derivatives	16
3. The Extended Massieu Function	23
4. Mechanical Equilibrium	32
Part II: Fluid Dynamics	
5. Thermal Conduction	38
6. Viscosity	52
7. Acoustic Absorption	59
A. Reversible dynamics	60
B. Irreversible dynamics	65
8. Thermal Dissipation	69
9. Bénard-Rayleigh's Thermal Convection	76
A. Thermodynamic machine	78
B. Drive and Load	85
C. Discussion	94
10. Taylor Vortices	103
A. Laminar regime	103
B. Thermodynamic machine	115
C. Drive and Load	119
D. Discussion	120
11. Poiseuille Flow	129
A. Laminar regime	130
B. Thermodynamic machine	133
C. Vortex string flow	137
D. Discussion	141
12. Navier-Stokes vs Liouville	151
Part III: Laser Physics	
13. Interlude	166

14. Matter and Light	170
A. Two-level systems	170
B. Oscillators	174
C. Rotors, ro-vibrators and others	176
15. Statistics	182
A. Two-level systems	182
B. Harmonic oscillators	186
16. Radiative Decay	189
A. Spontaneous emission	189
B. Blackbody radiation	191
C. Two-level systems	197
17. Collisional Relaxation	201
A. Energy relaxation	202
B. Phase relaxation	217
18. Laser Action	228
A. Homogeneous two-level systems	229
B. Inversion	231
C. Field equation	234
D. Threshold	235
E. Noise and fluctuations	238
19. Laser Osmosis	249
20. Saturation	260
21. Laser induced Drift	265
Conclusions	275
Appendix	
Symbols and definitions	279
Index	281
