

## TABLE OF CONTENTS

	Page
Preface . . . . .	v
 <b>Two- and Three-Dimensional Turbulence by Hendrik Tennekes</b>	
Preface . . . . .	1
Chapter 1: Introduction . . . . .	2
Chapter 2: Vorticity Dynamics . . . . .	7
Chapter 3: The Phenomenology of Turbulence . . . . .	10
Chapter 4: Consequences of the Kolmogorov Theory . . . . .	15
Chapter 5: Predictability and Other Problems . . . . .	20
Chapter 6: Predictability of a Simple System . . . . .	24
Chapter 7: Self-Consistent Scaling in the $K - \epsilon$ Model . . . . .	27
Chapter 8: The Decay of Turbulence in Plane Homogeneous Shear Flow . . . . .	32
Chapter 9: Second-Order Modeling: Some Examples . . . . .	36
Chapter 10: Part I: Second-Order Modeling: The Surface Layer . . . . .	40
Chapter 11: Part II: Flux Maintenance in Two-Dimensional Turbulence . . . . .	44
1. Introduction . . . . .	44
2. Governing Equations . . . . .	47
3. Stability Analysis . . . . .	51
4. Mean Flow and Eddy Kinetic Energy . . . . .	53
5. Heat Flux and Temperature Variance . . . . .	58
6. Flux Maintenance Dynamics . . . . .	60
7. Enstrophy Maintenance and Cascade Dynamics . . . . .	67
8. Conclusions . . . . .	72

Preface . . . . .	75
Chapter 1: Magnetofluid Turbulence . . . . .	76
The MHD Equations . . . . .	78
Chapter 2: The Origin of Turbulence. Part I: Shear Flow and Current Gradients . . . . .	86
A Prototype Example: Plane Poiseuille Flow . . . . .	86
Chapter 2: (continued) The Origin of Turbulence. Part II: MHD Analogue . . . . .	89
Chapter 3: Ideal MHD Stability, Incompressibility Conditions, and Ideal Invariants . . . . .	96
Chapter 4: Some Connections with Statistical Mechanics . . . . .	104
Chapter 5: More Statistical Mechanics . . . . .	109
Chapter 6: Spectral Cascades and Turbulent Relaxation Processes . . . . .	117
Chapter 7: Anisotropic Effects in MHD . . . . .	132
A. The Strauss Equations . . . . .	132
B. Anisotropic $k$ -Spectra by Alfvén Wave Effects . . . . .	135
C. MHD Turbulence in Tokamaks . . . . .	139
D. Numerical Investigations of the Strauss Equations . . . . .	142
Chapter 8: Compressible MHD Turbulent Relaxation . . . . .	148
Chapter 9: Part I: MHD Turbulence in Reversed-Field Pinch Plasmas . . . . .	154
Chapter 9: (continued) Part II: 3D Reversed-Field Pinch Simulation . . . . .	161
Chapter 10: MHD (Plasma) Turbulence to the Year 2000 . . . . .	166
A. Introduction . . . . .	166
B. Aesthetically Driven Problems . . . . .	166
C. Phenomenon-Driven Problems . . . . .	167
D. Conclusions . . . . .	168

## Notes by Douglas Lilly

face	171
Chapter 1: Helicity	172
Chapter 2: Helical Convection	181
2.1 Regimes of Atmospheric Convection	181
2.2 Convective Storm Evolution	181
2.3 Motion of Rotating Updrafts	183
Chapter 3: Flow Fields in Helical Convection	186
3.1 An Idealized Rotating Thunderstorm	186
3.2 Tornadic Flow Fields	188
3.3 Other Candidates for Helical Flow in the Atmosphere	188
Chapter 4: Turbulence in Stably Stratified Fluids	191
4.1 The Ozmidov Length Scale and Application	191
4.2 Waves and Quasi-Horizontal Turbulence	192
Chapter 5: Modes of Turbulence in Stably Stratified Environments: Part I	197
5.1 Grid-Generated or Numerically Initiated Turbulence	197
5.2 Wake Collapse	198
5.3 Turbulent Layer Bounded by Stable Interfaces	199
Chapter 6: Modes of Turbulence in Stably Stratified Environments: Part II	202
6.1 Breaking Gravity Waves	204
Chapter 7: Subgrid Closures in Large Eddy Simulation: Part I	207
7.1 Definitions	207
7.2 Smagorinsky Closure	208
7.3 Limitations and Adjustments to SGS Closures	211
Chapter 8: Subgrid Closures in Large Eddy Simulation: Part II	214
8.1 Leonard's Analysis	214
8.2 Subsequent Developments	216
8.3 Future Work	217

ures on Turbulence and Lattice Gas Hydrodynamics by Uriel Frisch	
Preface . . . . .	219
Chapter 1: Current Beliefs about Fully Developed Turbulence: Part I . . . . .	220
Chapter 2: Current Beliefs about Fully Developed Turbulence: Part II . . . . .	228
Chapter 3: Turbulent Transport of Scalars and Magnetic Fields . . . . .	234
1. Transport of Scalar Fields . . . . .	234
2. Transport of a Magnetic Field . . . . .	238
3. Conclusions . . . . .	243
Appendix to Chapter 3 . . . . .	243
Chapter 4: Large-Scale Instability in 3D Flows Lacking Parity-Invariance . . . . .	245
Chapter 5: Lattice Gas Hydrodynamics: Introduction . . . . .	252
Chapter 6: Lattice Gas Hydrodynamics: Microdynamics . . . . .	256
Chapter 7: Lattice Gas Hydrodynamics: Collisions and Equilibria . . . . .	258
Chapter 8: Lattice Gas Hydrodynamics: From Microdynamics to the Navier-Stokes Equations . . . . .	263
Chapter 9: Lattice Gas Hydrodynamics: Reynolds Number, Noisy Hydrodynamics . . . . .	268
Chapter 10: Lattice Gas Hydrodynamics: Software and Hardware Implementations. Concluding Remarks . . . . .	274
Chapter 11: Large-Scale Flow Driven by the Anisotropic Kinetic Alpha Effect . . . . .	279
1. Introduction . . . . .	279
2. The AKA Effect: The Linear Regime . . . . .	280
3. A Specific Example of AKA Instability . . . . .	282
4. Nonlinear Saturation of the AKA Instability . . . . .	286
5. Conclusion . . . . .	289
Appendix . . . . .	291
Appendix: "Lattice Gas Hydrodynamics in Two and Three Dimensions" . . . . .	297
