

# Contents

Foreword.....	vii
<i>Lotfi Zadeh</i>	
Preface .....	xi
<i>Bilal M. Ayyub, Ardeshir Guran, and Achintya Haldar</i>	
Contributors .....	xv
<b>Chapter 1. Stochastic Structural Dynamics - A Primer for Practical Applications</b> .....	1
<i>H. J. Pradlwarter and G. I. Schuëller</i>	
1. Introduction .....	1
2. Stochastic Processes .....	1
2.1 General Considerations .....	1
2.2 Stationary Processes .....	5
3. Monte Carlo Simulation of Stochastic Processes.....	7
4. Stochastic Response of Linear MDOF Systems.....	13
5. Non-Linear Stochastic Dynamic Analysis .....	20
6. References .....	27
<b>Chapter 2. Clumping Effect Approximations for Narrow-Band Random Vibration</b> .....	29
<i>Arvid Naess</i>	
1. Introduction .....	29
2. The Poisson Approximation.....	30
3. Clumping Effect Corrections .....	31
4. Example Applications .....	34
4.1 White Noise Excited Linear Oscillator .....	34
4.2 The Duffing Oscillator .....	38
4.3 Non-Gaussian Excited Linear Oscillator.....	40
5. References .....	43
6. Appendix .....	44

<b>Chapter 3. State Space Transport Across Separatrices: Dynamical Control and Relative Stability</b> .....	49
<i>Michael Frey</i>	
1. Introduction .....	49
1.1 Dynamical Systems and Separatrices .....	49
1.2 Safe Regions, System Failure and State Space Transport .....	53
2. Model .....	56
2.1 Energy Potentials .....	56
2.2 Perturbed Newtonian Systems .....	61
3. Flux Factor .....	64
3.1 Flux Factor Formulae .....	64
3.2 Gaussian Excitations .....	67
4. Dynamical Control .....	67
4.1 Control Model .....	69
4.2 Closed- vs. Open-Loop Control .....	69
4.3 Control Strength .....	71
4.4 Role of Control Lag .....	73
4.5 Optimal Control Filter .....	77
4.6 Limited Available Power .....	82
5. Relative Stability .....	85
5.1 Probability Ratio Relative Stability .....	86
5.2 Flux Ratio Relative Stability .....	87
5.3 Blowtorch Theorem .....	91
5.4 Counterexamples .....	92
6. Final Remarks .....	97
7. Acknowledgements .....	98
8. References .....	98

<b>Chapter 4. Dynamics of Nonlinear Stochastic Systems: A Frequency Domain Approach</b> .....	101
<i>Ahsan Kareem, Jun Zhao, Michael A. Tognarelli, and Kurtis R. Gurley</i>	
1. Introduction .....	101
2. Theoretical Background .....	104
2.1 Volterra Series .....	104
2.2 Types of Nonlinearities .....	106
2.3 Modelling of Wind and Wave Loads .....	106
2.4 Equivalent Statistical Quadratzation .....	109
2.4.1 Slow Drift Approximation .....	109
2.4.2 Splitting Technique .....	110
2.4.3 Quadratzation Procedure .....	110
2.4.4 Response Statistics .....	112
2.4.5 Direct Integration Method .....	113

2.4.6	Kac-Siegert Technique .....	114
2.4.7	Combined Wind, Wave and Current Effects .....	118
2.5	Equivalent Statistical Cubicization .....	118
2.5.1	Splitting Technique .....	118
2.5.2	Cubicization Procedure .....	119
2.5.3	Response Statistics .....	120
2.6	Probability Distribution of Response .....	121
2.6.1	Gram-Charlier Series Distribution .....	122
2.6.2	Moment-Based Hermite Transformation Method .....	122
2.6.3	Maximum Entropy Method .....	123
2.7	Mean Upcrossing Rate and Distribution of Maxima .....	126
2.8	Time-Domain Simulation.....	127
3.	Examples.....	128
4.	Concluding Remarks .....	142
5.	Acknowledgments .....	143
6.	References .....	143
<b>Chapter 5. Elements of Fuzzy Structural Control.....</b>		<b>147</b>
<i>Lucia Faravelli and Timothy Yao</i>		
1.	Introduction .....	147
2.	Fuzzy Control .....	149
2.1	Fuzzification Interface.....	149
2.2	Knowledge Base and Decision Making Logic .....	150
2.3	Defuzzification .....	150
3.	Implementing a Fuzzy Controller.....	151
4.	Hybrid Fuzzy-Neural Control System.....	153
4.1	Network Architecture .....	153
4.2	Learning from Training Data.....	154
5.	Numerical Examples .....	155
5.1	Basic Procedure.....	155
5.2	Linear SDOF .....	156
5.3	Nonlinear SDOF.....	156
5.4	Linear 2DOF.....	160
5.5	Nonlinear 2DOF .....	160
5.6	Adaptive Control .....	162
6.	Conclusions .....	163
7.	Acknowledgement .....	164
8.	References .....	164
<b>Chapter 6. Uncertainties in Structural Control.....</b>		<b>167</b>
<i>James T. -P. and Timothy Yao</i>		
1.	Introduction .....	167
2.	The Problem of Uncertainty in Structural Control .....	168

3. Literature Review .....	168
4. Discussion .....	171
5. Concluding Remarks .....	175
6. References .....	176
<b>Chapter 7. Structural Fuzzy Control.....</b>	<b>179</b>
<i>Maguid H.M. Hassan and Bilal M. Ayyub</i>	
1. Introduction .....	179
2. System Definition.....	181
2.1 Introduction .....	181
2.2 System Classification .....	181
2.3 General System Definition Framework.....	182
2.4 Definition of a Structural System for Safety Control During Construction .....	188
2.5 Definition of a Structural System for Reliability Control .....	193
2.6 Definition of a Structural System for Structural Dynamic Control.....	194
3. State Evaluation.....	198
3.1 Introduction .....	198
3.2 State Evaluation Building Blocks .....	199
3.3 State Evaluation for Safety Control During Construction.....	201
3.4 State Evaluation for Reliability Assessment and Control .....	213
3.5 State Evaluation for Active Structural Dynamic Control.....	218
4. Fuzzy Control .....	223
4.1 Introduction .....	223
4.2 Fuzzy Controller.....	223
4.3 Self Learning System .....	228
4.4 Control Action Implementation .....	229
5. References.....	231
<b>Chapter 8. Application of Fuzzy Logic to Structural Vibration Control.....</b>	<b>233</b>
<i>Hitoshi Furuta, Hiroo Okanan, Masayoshi Kaneyoshi, and Hiroshi Tanaka</i>	
1. Introduction .....	233
2. Application of Fuzzy Logic to Vibration Control .....	234
3. Numerical Simulation .....	238
4. Experiment .....	238
4.1 Models.....	238
4.2 Experimental Results .....	239
5. Self Tuning of Fuzzy Active Control.....	244
5.1 Outline of Genetic Algorithms .....	244
5.2 Modelling of Fuzzy Control Genotype.....	245
6. Automatic Tuning by Experiment.....	246
7. Experimental Results .....	248

8. Conclusions .....	250
9. References .....	251

**Chapter 9. Experimental Comparison of Probabilistic Methods and Fuzzy Set Based Methods for Designing Under Uncertainty .....253**  
*G. Maglaras, E. Nikolaidis, R. T. Haftka and H. H. Cudney*

1. Introduction .....	254
1.1 Motivation .....	254
1.2 Review of Methods for Designing Under Uncertainty .....	255
1.2.1 Probabilistic Methods .....	255
1.2.2 Review of Studies on Fuzzy Sets .....	256
1.2.3 Studies Comparing Fuzzy Set Based Methods and Probabilistic Methods .....	257
1.3 Contrast Between Probabilistic Methods and Fuzzy Set Based Methods ..	259
1.4 Objectives .....	260
1.5 Approach .....	260
1.6 Outline .....	263
2. Description of the Selected Problem .....	263
2.1 System Description .....	263
2.1.1 Truss Structure .....	263
2.1.2 Tuned Dampers .....	265
2.1.3 Tuning Masses .....	267
2.2 Finite Element Models .....	268
2.2.1 Truss Structure .....	268
2.2.2 Tuned Dampers .....	269
2.3 Instrumentation .....	270
2.4 Definition of Failure .....	270
3. Problem Formulation and Solution Techniques .....	270
3.1 Probabilistic and Fuzzy Set Based Approaches .....	271
3.2 Problem Description .....	273
3.2.1 Uncertainties .....	273
3.2.2 Design Requirements .....	273
3.2.3 Design Scenario .....	273
3.2.4 Formulation of the Probabilistic and Fuzzy Set Based Optimizations .....	274
3.2.5 Optimization Using a Genetic Algorithm .....	275
3.3 Probabilistic Analysis .....	275
3.4 Fuzzy Set Based Analysis .....	277
3.5 Selecting a Problem for Experimental Validation .....	283
3.6 Approximate Solution Technique .....	285
3.6.1 Evaluation of Peak Acceleration .....	285
3.6.2 2-Mode Approximation .....	285
4. Analytical Comparison of Probabilistic and Fuzzy Set Based Optimization .....	286

4.1	Creating and Characterizing Dampers .....	286
4.1.1	Creating a Sample of Dampers to Reduce Uncertainty in Experimentally Measured Failure Probability .....	293
4.2	Validation and Calibration of Analytical Models .....	294
4.2.1	Structural Model Refinement .....	294
4.2.2	Calibration of Peak Acceleration .....	295
4.3	Optimization Results .....	295
4.4	Summary of Section 4 .....	299
5.	Experimental Comparison .....	300
5.1	Experimental Results .....	300
5.2	Estimation of Error in Measured Failure Probabilities .....	302
5.2.1	Estimation of Experimental Error .....	304
5.2.2	Estimation of Resolution Error .....	306
5.3	Error in Analytically Predicted Probabilities of Failure .....	308
5.3.1	Calibration of Peak Acceleration .....	308
5.3.2	Difference in the Average Temperature When Damper Properties and Structural Response Were Measured .....	310
5.3.3	Updated Analytical Estimation of Failure Probabilities .....	310
6.	Conclusions and Future Work .....	314
7.	Acknowledgments .....	315
8.	References .....	315

## **Chapter 10. Fuzzy Logic Control System Design of an Impacting Flexible Link**

**Link** .....

*Dan Boghiu, Dan B. Marghitu, and Ardeshir Guran*

1.	Introduction .....	319
2.	Fuzzy Logic Control .....	321
2.1	Background on FLC .....	321
2.2	Design Procedure of FLC: A Case Study .....	322
3.	The System Model .....	332
4.	Fuzzy Logic Control .....	336
5.	Simulations and Results .....	338
5.1	Numerical Data for Simulations .....	338
5.2	Results Analysis .....	338
6.	Conclusions .....	342
7.	References .....	343
