<b>Preface</b>	vii
<b>Introduction</b>	1
1.1 History and Summary . . . . .	1
1.2 Notation and Terminology . . . . .	5
<b>The Antosik-Mikusinski Matrix Theorem</b>	9
2.1 Introduction . . . . .	9
2.2 The Antosik-Mikusinski Matrix Theorem . . . . .	10
2.3 The Nikodym Convergence Theorem . . . . .	16
<b><math>\mathcal{K}</math>-Convergence and <math>\mathcal{K}</math>-Boundedness</b>	21
3.1 Introduction . . . . .	21
3.2 $\mathcal{K}$ -Convergence: . . . . .	21
3.3 $\mathcal{K}$ -Boundedness . . . . .	29
3.4 $\mathcal{A}$ -Spaces . . . . .	33
3.5 An Abstract Hellinger-Toeplitz Theorem . . . . .	35
3.6 Variants of $\mathcal{K}$ Convergence . . . . .	37
<b>The Uniform Boundedness Principle</b>	41
4.1 Introduction . . . . .	41
4.2 The Uniform Boundedness Principle . . . . .	41
4.3 $\mathcal{A}$ -spaces . . . . .	44
4.4 Equicontinuity . . . . .	44
4.5 Ptak's Generalization of the UBP . . . . .	46
4.6 Maté's UBP . . . . .	48
4.7 The Nikodym Boundedness Theorem . . . . .	51
4.8 An Abstract Uniform Boundedness Result . . . . .	54
<b>The Banach-Steinhaus Theorem</b>	59
5.1 Introduction . . . . .	59
5.2 The General Banach-Steinhaus Theorem . . . . .	59
5.3 Equicontinuity . . . . .	60
5.4 The Hahn-Schur Summability Theorem . . . . .	63
5.5 Phillips' Lemma . . . . .	66

<b>6 Continuity and Hypocontinuity for Bilinear Maps</b>	<b>69</b>
6.1 Introduction . . . . .	69
6.2 Single Bilinear Mapping . . . . .	69
6.3 Families of Bilinear Maps . . . . .	73
<b>7 Pap's Adjoint Theorem</b>	<b>79</b>
7.1 Introduction . . . . .	79
7.2 The Adjoint Theorem . . . . .	79
7.3 Closed Graph Theorem . . . . .	80
<b>8 Vector Versions of the Hahn-Schur Theorems</b>	<b>83</b>
8.1 Subseries Convergent Series . . . . .	83
8.2 Bounded Multiplier Convergent Series . . . . .	89
8.3 Other Types of Convergence for Series . . . . .	95
8.4 Phillips' Lemma . . . . .	96
8.5 The Antosik Interchange Theorem . . . . .	98
<b>9 An Abstract Hahn-Schur Theorem</b>	<b>101</b>
9.1 Introduction . . . . .	101
9.2 Definitions and Examples . . . . .	101
9.3 The Abstract Hahn-Schur Theorem . . . . .	104
9.4 Special Cases . . . . .	112
9.5 Other Abstract Hahn-Schur Results . . . . .	117
<b>10 The Orlicz-Pettis Theorem</b>	<b>119</b>
10.1 Introduction . . . . .	119
10.2 Normed Linear Spaces . . . . .	121
10.3 Locally Convex Spaces . . . . .	122
10.4 Spaces with a Schauder Basis . . . . .	125
10.5 Linear Operators . . . . .	129
10.6 Abstract Orlicz-Pettis Theorems . . . . .	132
10.7 $\mathcal{K}$ -Convergence and the Orlicz-Pettis Theorem . . . . .	136
<b>11 Imbedding <math>c_0</math> and <math>\ell^\infty</math></b>	<b>139</b>
11.1 Introduction . . . . .	139
11.2 Imbedding $c_0$ . . . . .	139
11.3 Imbedding $\ell^\infty$ . . . . .	145
<b>12 Sequence Spaces</b>	<b>149</b>
12.1 Introduction . . . . .	149
12.2 Weak Sequential Completeness of $\alpha$ -Duals . . . . .	150
12.3 Weak Sequential Completeness of $\sigma$ -duals . . . . .	152
12.4 Weak Sequential Completeness of $\beta$ -duals . . . . .	155
12.5 Banach-Steinhaus Results . . . . .	160

12.6 Automatic Continuity for Matrix Mappings . . . . .	167
12.7 The Transpose of a Summability Matrix . . . . .	174
12.8 The Kernel Theorem for Köthe Sequence Spaces . . . . .	186
<b>Index</b>	<b>193</b>
<b>References</b>	<b>197</b>
