

CONTENTS

1.	INTRODUCTION	1
	1.1. Background	1
	1.2. Scope	4
	1.3. Structure	4
2.	TYPES OF SITES, HAZARDS, AND CONTAMINANT BEHAVIOUR.	5
	2.1. Types of sites with mixed contamination	5
	2.2. Types of hazards at sites with mixed contamination	6
	2.2.1. Overview	6
	2.2.2. Radionuclides	11
	2.2.3. Toxic and heavy metals	12
	2.2.4. Toxic organic compounds	12
	2.2.5. Nitrates	13
	2.2.6. Biohazardous agents	13
	2.2.7. Asbestos and other inhalable fibres	14
	2.2.8. Flammable and combustible materials	14
	2.2.9. Corrosive chemicals	15
	2.2.10. Reactive chemicals	15
	2.2.11. Pyrophoric metals	16
	2.2.12. Ordnance and explosives	17
	2.3. Environmental behaviour of contaminants	17
	2.3.1. Overview	17
	2.3.2. Physical environmental processes	19
	2.3.3. Chemical environmental processes	21
	2.3.4. Biological environmental processes	25
3.	REGULATORY IMPLICATIONS	26
	3.1. Regulatory regimes	26
	3.2. Assessments of environmental impacts	27
	3.3. Cleanup targets	29
	3.4. Limits on worker and public exposures	30
	3.5. Waste management	31
	3.6. Mixed waste transportation	32

3.7.	Regulations affecting the implementation of a remediation operation.	32
3.8.	Institutional control and stewardship issues	33
4.	IMPLICATIONS FOR WORKER HEALTH AND SAFETY	34
4.1.	General considerations	34
4.2.	Establishment of a proper organization.	34
4.3.	Training	34
4.4.	Hazard characterization and exposure assessment	35
4.5.	Health and safety plan	35
4.6.	Site access and hazard controls.	36
4.7.	Site and worker monitoring.	36
4.8.	Worker and equipment decontamination	36
4.9.	Emergency preparedness and response.	37
4.10.	Contingency planning	37
5.	IMPLICATIONS FOR SAMPLING AND ANALYSIS	38
5.1.	Overview	38
5.2.	Sampling strategies.	38
5.3.	Sampling techniques.	39
5.4.	Health and safety precautions.	44
5.5.	Quality control and quality assurance	44
6.	ELEMENTS OF THE REMEDIATION PROCESS	45
6.1.	Overview	45
6.2.	Management options	45
6.3.	Interactions with national and local regulatory bodies	48
6.4.	Participation of other stakeholders	48
6.5.	Site assessment	49
6.5.1.	The process	49
6.5.2.	Historical review	49
6.5.3.	Scoping site characterization	49
6.5.4.	Conceptual site model	50
6.5.5.	Detailed site characterization.	50
6.6.	Risk and preliminary environmental impact assessments.	50

7.	TECHNOLOGY EVALUATION AND SELECTION	51
7.1.	Technical factors to be considered	51
7.2.	Fundamental technical choices	53
7.3.	Technology sources	55
7.4.	Evaluation criteria	55
7.4.1.	Effectiveness	56
7.4.2.	Ease of implementation	57
7.4.3.	Cost	57
7.4.4.	Occupational safety and health	58
7.4.5.	Secondary environmental impacts	60
7.4.6.	Prior experience	61
7.4.7.	Socioeconomic considerations	61
7.5.	Overview of remediation techniques	62
8.	MONITORED NON-INTERVENTION	62
8.1.	Justification	62
8.2.	Applicability to inorganic contaminants	70
8.3.	Processes affecting organic contaminants	71
8.3.1.	General observations	71
8.3.2.	Biodegradation	71
8.3.3.	Sorption	73
8.3.4.	Physical processes	74
9.	BLOCKING OF PATHWAYS	75
9.1.	Enhanced natural attenuation	75
9.2.	Barriers and liners	78
9.2.1.	The concept	78
9.2.2.	Surface barriers	79
9.2.3.	Subsurface barriers	81
9.3.	In situ treatment	88
9.3.1.	Reactive permeable barriers	88
9.3.2.	Biological barrier walls	95
9.3.3.	In situ immobilization/solidification	97
9.3.4.	In situ vitrification	99
9.3.5.	In situ chemical oxidation	103

10.	REMOVAL OF THE SOURCE TERM	104
10.1.	Excavation	104
10.1.1.	Preconditions and constraints	104
10.1.2.	Contamination control	105
10.1.3.	Excavation techniques	106
10.1.4.	Waste stabilization as a pretreatment for excavation and retrieval	110
10.2.	Pump and treat for surface water and groundwater	111
10.2.1.	The concept	111
10.2.2.	Applicability	113
10.2.3.	Pumping techniques	115
10.2.4.	Treatment systems	115
10.3.	Enhanced recovery	117
10.3.1.	The concept	117
10.3.2.	Chemical agents	118
10.3.3.	Electrokinetic extraction	120
10.3.4.	Displacement by inert electrolytes	123
10.3.5.	Co-solvent solubilization	124
10.3.6.	Surfactants and micro-emulsions	125
10.3.7.	Physical methods	129
10.3.8.	Thermal methods	132
10.3.9.	Biological methods	133
10.4.	Treatment for contaminant destruction and removal	133
10.4.1.	The mixed contamination context	133
10.4.2.	Dynamic underground stripping and hydrous pyrolysis oxidation	133
10.4.3.	Soil vapour extraction	135
10.4.4.	Thermal methods	136
10.4.5.	In situ biological remediation	139
10.4.6.	Phytoremediation	148
11.	EX SITU TREATMENT	150
11.1.	Physical separation	150
11.1.1.	Particle separation techniques	150
11.1.2.	Segmented gate systems	153
11.2.	Chemical and physicochemical separation	153
11.2.1.	Soil washing	153
11.2.2.	Adsorption	154
11.2.3.	Ion exchange	156

11.2.4.	Membrane pervaporation and reverse osmosis	157
11.2.5.	Precipitation	158
11.2.6.	Distillation	159
11.3.	Chemical and physical contaminant destruction	160
11.3.1.	Overview	160
11.3.2.	Incineration	160
11.3.3.	Pyrolysis	162
11.3.4.	Thermal desorption	163
11.3.5.	Ex situ vitrification	165
11.3.6.	Fluid bed steam reforming	166
11.3.7.	Solvated electron technology (SET™)	168
11.3.8.	Ozonation and peroxide application	169
11.3.9.	Landfarming, biopiles and composting	171
11.3.10.	Bioreactors	174
11.4.	Ex situ water treatment	175
11.4.1.	Principles	175
11.4.2.	Trickling filters	176
11.4.3.	Rotating biological contactors	177
11.4.4.	Fluidized bed reactors	178
11.5.	Immobilization and solidification for soils	178
12.	SUMMARY AND CONCLUSIONS	181
12.1.	Overview	181
12.2.	Sources of contamination	182
12.3.	Regulatory implications	182
12.4.	Implications for worker health and safety	182
12.5.	Implications for sampling and analysis	183
12.6.	Remediation options	183
12.7.	Monitored non-intervention	184
12.8.	Blocking of pathways	185
12.9.	Source term removal	185
12.10.	Ex situ treatment methods	186
12.11.	Conclusions	187
