Preface	xvii
Chapter 1: The Telecommunication Environment	1
1.1 Introduction	1
1.1.1 An Historical View	2
1.1.2 The Future	3
1.1.3 The Course of Investigation	5
1.2 Components of a Telecommunication Network	7
1.2.1 Voice Networks	9
1.2.2 Data Networks	33
1.3 Telecommunication Carriers	63
1.4 Network Design Philosophies	64
Chapter 2: Standards-setting Bodies for Telecommunication	69
2.1 The Need for Standards	69
2.1.1 Telecommunication	69
2.1.2 Data Communication	70
2.2 Types of Standards	71
2.3 The Standards Development Cycle	72
2.4 Major Bodies	73
2.4.1 International Telecommunication Union	73
2.4.2 The CCITT	75
2.4.3 Consultative Committee on International Radio (CCIR)	79
2.4.4 International Organization for Standardization (ISO)	81
2.4.5 American National Standards Institute (ANSI)	82
2.4.6 Exchange Carrier Standards Association (ECSA)	84
2.4.7 Electronics Industries Association (EIA)	85
2.4.8 Institute of Electrical and Electronics Engineers (IEEE)	85
2.4.9 International Electrotechnical Commission (IEC)	87
2.4.10 Computer and Business Equipment Manufacturers Association (CBEMA)	87

# *Contents*

Preface	xvii
Chapter 1: The Telecommunication Environment	1
1.1 Introduction	1
1.1.1 An Historical View	2
1.1.2 The Future	3
1.1.3 The Course of Investigation	5
1.2 Components of a Telecommunication Network	7
1.2.1 Voice Networks	9
1.2.2 Data Networks	33
1.3 Telecommunication Carriers	63
1.4 Network Design Philosophies	64
Chapter 2: Standards-setting Bodies for Telecommunication	69
2.1 The Need for Standards	69
2.1.1 Telecommunication	69
2.1.2 Data Communication	70
2.2 Types of Standards	71
2.3 The Standards Development Cycle	72
2.4 Major Bodies	73
2.4.1 International Telecommunication Union	73
2.4.2 The CCITT	75
2.4.3 Consultative Committee on International Radio (CCIR)	79
2.4.4 International Organization for Standardization (ISO)	81
2.4.5 American National Standards Institute (ANSI)	82
2.4.6 Exchange Carrier Standards Association (ECSA)	84
2.4.7 Electronics Industries Association (EIA)	85
2.4.8 Institute of Electrical and Electronics Engineers (IEEE)	85
2.4.9 International Electrotechnical Commission (IEC)	87
2.4.10 Computer and Business Equipment Manufacturers Association (CBEMA)	87

2.4.11	National Institute of Standards and Technology (NIST)	88
2.4.12	European Standards-setting Bodies	89
2.4.13	Other Standards Organizations	93
2.5	Issues Pertaining to Delivery of Standards—A Critical Assessment	96
2.5.1	The Environment	96
2.5.2	The Embedded Base Push-Pull	97
2.5.3	Final Standards	98
2.5.4	Some Approaches	99
Chapter 3:	Digital Transmission Systems	101
3.1	Carrier Systems	103
3.1.1	Analog Signals: The FDM Hierarchy	104
3.1.2	Digital Signals: The TDM Hierarchy	104
3.1.3	T1 Copper-based Local Loop	107
3.1.4	DS1 Signal Format	109
3.2	Channel Coding Methods and Issues	120
3.2.1	Ones-Density Issues	121
3.2.2	DS2 Stream	126
3.2.3	European Digital Systems	127
3.3	Channel Service Units	128
3.3.1	Digital Link Testing Capabilities Provided by the CSU	131
3.3.2	Recent Changes to FCC Part 68	132
3.4	Digital Carrier Equipment	134
3.4.1	Channel Banks	135
3.4.2	Transcoders	138
3.4.3	Digital Cross-Connect Systems	140
3.5	Testing Digital Carrier Systems	142
3.5.1	In-Service Testing	142
3.5.2	Service-Disruptive Testing	144
3.5.3	ESF Testing Issues	144
3.6	DS3 Systems	145
3.6.1	Activity at the DS3 Rate	145
3.6.2	Approaches to Synchronous Transmission	146
3.6.3	Existing Format: The Traditional M23 Multiplex DS3 Format	147
3.6.4	C-Bit Parity Format	148
3.6.5	DS3 Syntran Format	149
3.7	End-User Application of Digital Transmission Technology	151
3.8	SONET: Beyond DS3	153
3.8.1	Background	153
3.8.2	Overview of Key SONET Concepts	155

---

3.8.3	STS-1 Frame Format	158
3.8.4	Virtual Tributaries	159
3.8.5	Other SONET Mappings	162
3.8.6	STS-N Frame Structure	163
3.8.7	Concatenated STS-1s	163
3.8.8	Network Equipment	165
4:	ISDN and BISDN	169
	The Motivation for ISDN	169
4.1.1	ISDN goals	169
4.1.2	Thrust for ISDN	171
	ISDN Concepts	171
4.2.1	ISDN Framework	172
4.2.2	ISDN Reference Configuration	172
	ISDN Standards	180
	ISDN Data Communication Issues	184
4.4.1	ISDN Rate Adaption	184
4.4.2	Some Possible Limitations of ISDN for Data	185
4.4.3	NIU Forum	186
	ISDN Physical Transmission Method	186
4.5.1	The 2B1Q Line Coding	188
4.5.2	Functional Characteristics	192
4.5.3	Primary Rate Line Coding	194
	C-Plane (Signaling) Protocols	194
4.6.1	D Channel Data Link Layer Operation	194
4.6.2	D Channel Network Layer Operation	198
	ISDN Packet Services	208
4.7.1	Frame Relaying Service	209
4.7.2	Frame Relaying 1 Service Description	213
4.7.3	Frame Relaying 2 Service Description	213
4.7.4	Frame Switching Service Description	214
4.7.5	Frame Relay Network Interworking	214
	ISDN Evolution	215
	Broadband ISDN	217
4.9.1	BISDN Protocol Model	219
4.9.2	Asynchronous Transfer Mode	219
4.9.3	User-Network Interface and Access	224
4.9.4	BISDN Status	225
4.9.5	Relationship with SONET	226
5:	Transmission Media and Radio Services	229
	Introduction	229
5.1.1	The Electromagnetic Field	230

---

5.1.2	Examples of Wireless Transmission Systems	231
5.1.3	Typical Throughput	233
5.1.4	Transmission Technologies	234
5.2	Radio Transmission Channel	234
5.2.1	Frequency Bands below 3 GHz	234
5.2.2	Frequency Bands above 3 GHz	237
5.3	Radio-based Data Communication Services	238
5.3.1	Microwave Transmission	238
5.3.2	Satellite Transmission	238
5.3.3	Cellular Radio Transmission	239
5.3.4	Packet Radio Transmission	241
5.3.5	FM Carrier Transmission	242
5.3.6	FM Subcarrier Transmission	243
5.3.7	Teletext Transmission	243
5.3.8	TV-Embedded FM Subcarrier Transmission	243
5.3.9	Pagers	243
5.3.10	Radiodetermination	244
5.3.11	Digital Cordless Telephones	245
5.4	Data Communication over Radio Channels	245
5.4.1	Motivation	245
5.4.2	Data Transmission over Cellular Links	246
5.4.3	Direct Data on Two-way Radio Channels	249
5.4.4	Packet Radio Systems	252
5.4.5	Data over FM Subcarrier Channels	256
Chapter 6:	Satellite and Microwave Transmission Systems	269
6.1	Introduction	269
6.1.1	Types of Satellites	269
6.1.2	Altitude Bands	274
6.1.3	Apogee and Perigee	274
6.1.4	Inclination	275
6.1.5	Advantages of Satellite Communication	275
6.1.6	Satellite Regulation and Management	276
6.1.7	Components of a Satellite Communication System	283
6.2	Applications of Satellite Technology	285
6.2.1	Common Business Applications	285
6.2.2	Direct Broadcast Satellite (DBS)	288
6.2.3	Satellite Application Trends	289
6.3	Transmission Channel	290
6.3.1	Satellite Radio Transmission Bands	290
6.4	Transmission Impairments	293
6.4.1	Attenuation	293

---

6.4.2	Obstruction Interference	294
6.4.3	Interference	295
6.4.4	Propagation Delay	295
6.4.5	Partial Solutions to Satellite Problems	298
Satellite Access Schemes		298
6.5.1	FDMA	300
6.5.2	TDMA	300
6.5.3	Demand Access	301
6.5.4	Spread Spectrum	302
6.5.5	Transmission Summary	304
Trends		304
6.6.1	Frequency Reuse	305
6.6.2	Onboard Processing and Switching	305
6.6.3	Spot Beams	306
6.6.4	Cellular Coverage	306
6.6.5	Scanning Antenna Beams	307
6.6.6	Increased Transponder Power	308
6.6.7	Satellite's Long-term Future	309
Orbits and Coverage Capabilities		310
Transponder Technology		310
6.8.1	Transponder Internals	320
6.8.2	Coverage Zones and Transponder Design	321
Earth Station Technology		323
6.9.1	The Earth Station	323
6.9.2	Antenna Size	323
6.9.3	Amplifier Equipment	324
VSAT Technologies		325
6.10.1	VSAT Network Components	327
6.10.2	VSAT Market	330
Microwave Systems		334
6.11.1	Microwave Transmitters	334
6.11.2	Modulation Methods	335
6.11.3	Microwave Antennas	337
6.11.4	Connection to an Outdoor Antenna	337
6.11.5	Microwave Repeaters	338
6.11.6	Microwave Receiver	338
Chapter 7: Fiber Optics Technology and Transmission Systems		341
Introduction		341
Fiber Optics Communication Components		343
7.2.1	Message Origin	343
7.2.2	Modulator	343

7.2.3	Carrier Source	345
7.2.4	Channel Coupler (Input)	348
7.2.5	Transmission Channel	348
7.2.6	Channel Coupler (Output)	360
7.2.7	Detector	360
7.2.8	Signal Processor	362
7.2.9	Message Output	362
7.3	Fiber Optic Cable	363
7.4	Network Deployment	368
7.4.1	Long-Haul	368
7.4.2	Cost Considerations for Long-Haul	368
7.4.3	BOCs	369
7.4.4	Cost Considerations for the Feeder Plant	369
7.4.5	Bandwidth Augmentation on Existing Fibers	370
7.5	Fiber Optic Standards	371
7.6	Technology Trends	373
7.6.1	Near-Term Trends	373
7.6.2	Long-Term Trends	376
7.7	Fiber-based CATV	377
7.8	Fiber Loop Architectures	379
7.8.1	Major Proposed Architectures	380
7.8.2	Major Fiber Loop Trials, <i>circa</i> 1990	382
Chapter 8:	Free-Space Infrared Optical Communication Systems	389
8.1	Applications of Free-Space Infrared Technology	389
8.2	Advantages and Disadvantages	391
8.3	Hardware Components	394
8.4	Pragmatic Issues Affecting the Choice of Technology	396
8.5	Cost of the Technology	397
Chapter 9:	Switching and Signaling Systems	399
9.1	Overview	399
9.2	Switching Systems	401
9.2.1	Common Control	401
9.2.2	Space-Division Switching	402
9.2.3	Time-Division Switching	405
9.2.4	Deployment of Switching Technology and Switches	407
9.2.5	Equipment	410
9.2.6	The Future of Switches	411
9.3	Signaling	412
9.3.1	Need for Signaling	412
9.3.2	Signaling Functions	413
9.3.3	Functional <i>versus</i> Stimulus Signaling	415

---

9.3.4	In-Band and Out-of-Band Signaling	417
9.3.5	Problems with In-Band Signaling	417
9.3.6	Traditional Signaling Mechanisms	417
9.4	Common Channel Signaling (CCS)	423
9.4.1	Needs for Improved Signaling	423
9.4.2	CCS Architecture	424
9.4.3	CCITT Signaling System Number 7	426
9.5	Network Plant Architectures of the Late 1980s and Early 1990s	433
9.5.1	AT&T	433
9.5.2	BOCs	435
9.5.3	International	436
Chapter 10	Private Branch Exchanges: Technology and Networking	439
10.1	Overview	439
10.2	Four Generations of PBXs	440
10.2.1	Building Wiring	444
10.2.2	CENTREX	444
10.3	Internetworking PBXs	446
10.3.1	Topologies	447
10.3.2	Traditional PBX Signaling Summary	450
10.3.3	Details of Traditional PBX Trunk Signaling	451
10.3.4	ISDN and Its Effect on User-to-Network Signaling	455
10.3.5	Issues Affecting Inter-PBX Signaling	458
10.3.6	Computer-to-PBX Interfaces	461
10.4	Network Design Considerations	462
10.4.1	Measurement Purposes	463
10.4.2	Issues	464
10.4.3	Measurements	466
10.4.4	Typical PBX Measurements and Reports	468
10.4.5	Conclusion on Vendor-provided Data	471
10.4.6	Issues of Data Integrity	471
10.4.7	Busy Hour Issues	475
Chapter 11	Data Communication Issues Affecting the 1990s	481
11.1	Introduction	481
11.2	Digital Encoding Methods	482
11.3	Cyclic Redundancy Checking	484
11.4	Packet-Switching Technology	486
11.4.1	X.25 Packet Protocols	487
11.4.2	Data Link Level	488
11.4.3	Packet Level	489
11.4.4	PADs	490
11.4.5	Recent Activities in X.25 Standards	491

11.4.6	Connectionless-Mode Lower Layers: Relationships with ISO Efforts	492
11.4.7	Data Link Layer and Physical Layer Standards	495
11.5	Systems Network Architecture (SNA) Concepts	496
11.5.1	Architecture	496
11.5.2	Key Mainframe Facilities	499
11.5.3	SNA Physical Unit Types	499
11.5.4	SNA Logical Units	500
11.5.5	SNA Directions	503
11.5.6	Systems Application Architecture	508
Chapter 12:	Channel-to-Channel Computer Communication	511
12.1	Overview	511
12.2	Data Communication Environment Needs for the Early 1990s	512
12.2.1	Application Environment	513
12.3	Mainframe Input-Output Mechanisms	516
12.4	Channel Extender Usage	520
12.5	Network Topologies for Using Channel Extension	521
12.6	Channel Extender Equipment	522
12.6.1	Equipment Categories	524
12.6.2	Channel Extender Design Issues	526
12.6.3	Equipment Features	528
12.6.4	Relationship with Fiber Optic Modems and Multiplexers	529
12.6.5	Relationship with Digital Switching Matrices	529
12.7	Potential Future Developments	530
Chapter 13:	Data Communication Standards	533
13.1	The Open System Interconnection Reference Model	533
13.1.1	Application Layer Standards	545
13.2	Technical Details of Upper Layer Standards	565
13.2.1	Naming, Addressing, and Directory	565
13.2.2	Standardization of File Transfer	574
13.2.3	Abstract Syntax Notation One (ASN.1)	579
13.2.4	Message Handling Systems and Services (X.400)	581
13.3	MAP/TOP Standardization Efforts	593
13.3.1	MAP/TOP Network Services	594
13.3.2	MAP/TOP Network Management	595
13.3.3	MAP/TOP Application Program Interface	597
13.3.4	MAP/TOP Releases	597
13.4	Other OSI-based Efforts	598
Chapter 14:	Local Area Networks and Their Management	601
14.1	LAN Basics	601
14.1.1	Topologies	602

14.1.2	Bandwidth	603
14.1.3	Access to the Network	604
14.1.4	LAN Standards	605
14.1.5	Internetworking LANs Using OSI Methods	615
14.1.6	LAN Interconnection Methods: Hardware Perspective	616
14.1.7	TCP/IP	627
14.1.8	IEEE 802.9	634
	Practical Aspects of LAN Management	638
14.2.1	Fault Management	642
14.2.2	Configuration Management	649
14.2.3	Accounting Management	653
14.2.4	Performance Management	654
14.2.5	Security Management	658
14.2.6	NetView and LANs	665
Chapter 15: Metropolitan Area Networks and Fiber Distributed Data		
	Interface	671
	FDDI Background	671
15.1.1	FDDI Standards	674
15.1.2	FDDI Station Types	675
15.1.3	Applications	675
	FDDI Specifications	679
15.2.1	Physical Medium-Dependent Specification	680
15.2.2	Physical Sublayer Specification	681
15.2.3	Media Access Control Specification	685
15.2.4	Station Management	687
15.2.5	Higher Layers	687
	1990-92 Activities	688
15.3.1	Some FDDI Vendors	689
	Public MANs	690
15.4.1	IEEE Project 802.6	692
15.4.2	IEEE 802.6 Timetable	696
15.4.3	Switched Multi-Megabit Data Service	697
Chapter 16: Network Management Standards and Issues		
	The Changing Environment and the New Directions	704
	New Definitions and Scope	707
	Evolution of Vendor Approaches	710
	Need for Network Management Standards	712
	Initial Convergence	716
	Target: OSI Network Management Standards	718
	Integrated Systems	724
16.7.1	NetView	725

---

16.7.2	Net/Master	726
16.7.3	AT&T's UNMA	727
16.7.4	DEC	729
Chapter 17	Network Security and the Evolving International Standards	733
17.1	Introduction	733
17.2	The Environment	734
17.3	OSI Security and Security Management Standard	737
17.3.1	Network Security Threats	739
17.3.2	Specific Threats to the Network	740
17.3.3	OSI Security Services and Mechanisms	741
17.3.4	Relationship of the Services, Mechanisms, and Layers	749
17.4	Security Management	749
17.5	Security Frameworks	754
17.5.1	Security Framework Overview Document	754
17.5.2	Authentication Framework	755
17.5.3	Access Control Framework	755
17.5.4	Nonrepudiation Framework	755
17.5.5	Integrity Framework	755
17.5.6	Confidentiality Framework	755
17.5.7	Security Audit Framework	755
17.5.8	Current Standardization Efforts	755
17.6	Other Standards Efforts	756
17.6.1	U.S. Government	756
17.6.2	Financial Industry	757
Appendix A		759
