

## Table of Contents

List of Publications	xi
<b>General Introduction: The Worlds of Science</b>	1
<b>A. Fundamental Issues in Hydrodynamics, Condensed Matter and Field Theory</b>	
<b>From Level to Level</b>	7
1. On Two Levels [115]	10
2. Hydrodynamic Equations and Correlation Functions [11] (with <i>P. C. Martin</i> )	12
3. The Electron-Phonon Interaction in Normal and Superconducting Metals [17]	63
4. Wave-Function Fluctuations in Finite Superconductors [29]	99
5. The Application of Renormalization Group Techniques to Quarks and Strings [58]	103
6. Disorder Variables and Para-Fermions in Two-Dimensional Statistical Mechanics [74] (with <i>E. Fradkin</i> )	133
7. Computational Physics: Pluses and Minuses [116]	148
8. Cathedrals and Other Edifices [118]	150
9. From Neutrinos to Quasiparticles [125]	152
<b>B. Scaling and Phase Transitions</b>	
<b>On the Joys of Creation</b>	157
1. Spin-Spin Correlation in the Two-Dimensional Ising Model [23]	163
2. Scaling Laws for Ising Models Near $T_c$ [22]	192
3. Static Phenomena Near Critical Points: Theory and Experiment [26] (with <i>W. Götze, D. Hamblen, R. Hecht, E. A. S. Lewis, V. V. Palciauskas, M. Rayl, J. Swift, D. Aspnes and J. W. Kane</i> )	202
4. Transport Coefficients Near the Critical Point: A Master-Equation Approach [27]	239

5. Transport Coefficients Near the Liquid-Gas Critical Point [28] (with <i>J. Swift</i> )	252
6. The Droplet Model and Scaling [38]	265
7. Critical Behavior. Universality and Scaling [39]	270
8. Scaling, Universality and Operator Algebras [54]	288
9. Determination of an Operator Algebra for the Two-Dimensional Ising Model [41] (with <i>H. Ceva</i> )	322
10. Teaching the Renormalization Group [62] (with <i>H. J. Maris</i> )	344
11. Scaling and Universality in Statistical Physics [136]	350

### **C. Simulations, Urban Studies, and Social Systems**

#### **Models and Arguments**

1. Computer Display and Analysis of Urban Information Through Time and Space [37] (with <i>J. R. Voss and W. J. Bouknight</i> )	367
2. From Simulation Model to Public Policy: An Examination of Forrester's "Urban Dynamics" [42]	371
3. Public Policy Conclusions from Urban Growth Models [46] (with <i>H. Weinblatt</i> )	398
4. A Simulation Model of Urban Labor Markets and Development Policy [51] (with <i>B. Harrison and B. Chinitz</i> )	406
5. The Big, the Bad and the Beautiful [128]	413
6. Hard Times [152]	448
7. Greats [166]	450
	452

### **D. Turbulence and Chaos**

#### **Questions Without Answers**

1. Roads to Chaos [94]	457
2. Chaos: A View of Complexity in the Physical Sciences [114]	461
3. From Periodic Motion to Unbounded Chaos: Investigations of the Simple Pendulum [100]	469
	500

4. Escape from Strange Repellers [97] (with <i>C. Tang</i> )	505
5. Global Universality at the Onset of Chaos: Results of a Forced Rayleigh-Benard Experiment [107] (with <i>M. H. Jensen, A. Libchaber, I. Procaccia and J. Stavans</i> )	509
6. Fractal Measures and Their Singularities: The Characterization of Strange Sets [107] (with <i>T. C. Halsey, M. H. Jensen, I. Procaccia and B. I. Shraiman</i> )	513
7. Fractals: Where's the Physics? [111]	524
8. Scaling and Multiscaling (Fractals and Multifractals) [141]	526
9. Complex Analytic Methods for Viscous Flows in Two Dimensions [108] (with <i>D. Bensimon, S. Liang, B. I. Shraiman and C. Tang</i> )	554
10. On Complexity [120]	586
11. Interactive Computation for Undergraduates [130]	588

## **E. Complex Patterns**

<b>From Correlation to Complexity</b>	593
1. Scaling and Structures in the Hard Turbulence Region of Rayleigh Benard Convection [135]	596
2. Turbulence dans une Boîte [147] (with <i>A. Libchaber, E. Moses and G. Zocchi</i> )	604
3. Complex Structures from Simple Systems [149]	613
4. Bubble, Bubble, Boil and Trouble [165] (with <i>D. H. Rothman</i> )	615
5. A Model of Turbulence [169]	632
6. Cascade Models of Turbulence and Mixing [175]	634
7. Scaling and Linear Response in the GOY Turbulence Model [171] (with <i>D. Lohse and N. Schörghofer</i> )	648
8. Singularities and Similarities in Interface Flows [163] (with <i>A. L. Bertozzi, M. P. Brenner and T. F. Dupont</i> )	670
9. Singularities and Blowups [180]	724
10. Breakdown of Hydrodynamics in a One Dimensional System of Inelastic Particles [167]	726

11. Self-Organised Short-Term Memories [176] 730  
*(with S. N. Coppersmith, T. C. Jones, A. Levine, J. P. McCarten,  
S. R. Nagel, S. C. Venkataramani and X. Wu)*
12. A Poiseuille Viscometer for Lattice Gas Automata [126] 734  
*(with G. R. McNamara and G. Zanetti)*
