

# Contents

<b>Introduction</b>	<b>1</b>
1.1 Classification of optical processes	1
1.2 Optical coefficients	2
1.3 The complex refractive index and dielectric constant	5
1.4 Optical materials	8
1.4.1 Crystalline insulators and semiconductors	8
1.4.2 Glasses	11
1.4.3 Metals	12
1.4.4 Molecular materials	13
1.4.5 Doped glasses and insulators	14
1.5 Characteristic optical physics in the solid state	15
1.5.1 Crystal symmetry	16
1.5.2 Electronic bands	18
1.5.3 Vibronic bands	19
1.5.4 The density of states	19
1.5.5 Delocalized states and collective excitations	19
1.6 Microscopic models	20
<b>Classical propagation</b>	<b>25</b>
2.1 Propagation of light in a dense optical medium	25
2.1.1 Atomic oscillators	26
2.1.2 Vibrational oscillators	28
2.1.3 Free electron oscillators	29
2.2 The dipole oscillator model	29
2.2.1 The Lorentz oscillator	29
2.2.2 Multiple resonances	34
2.2.3 Comparison with experimental data	37
2.2.4 Local field corrections	39
2.2.5 The Kramers–Kronig relationships	40
2.3 Dispersion	40
2.4 Optical anisotropy: birefringence	42
<b>Interband absorption</b>	<b>49</b>
3.1 Interband transitions	49
3.2 The transition rate for direct absorption	51
3.3 Band edge absorption in direct gap semiconductors	54
3.3.1 The atomic physics of the interband transitions	54
3.3.2 The band structure of a direct gap III–V semiconductor	56
3.3.3 The joint density of states	57

3.3.4	The frequency dependence of the band edge absorption	
3.3.5	The Franz–Keldysh effect	
3.3.6	Band edge absorption in a magnetic field	
3.4	Band edge absorption in indirect gap semiconductors	
3.5	Interband absorption above the band edge	
3.6	Measurement of absorption spectra	
3.7	Semiconductor photodetectors	
3.7.1	Photodiodes	
3.7.2	Photoconductive devices	
3.7.3	Photovoltaic devices	
<b>4</b>	<b>Excitons</b>	
4.1	The concept of excitons	
4.2	Free excitons	
4.2.1	Binding energy and radius	
4.2.2	Exciton absorption	
4.2.3	Experimental data for free excitons in GaAs	
4.3	Free excitons in external fields	
4.3.1	Electric fields	
4.3.2	Magnetic fields	
4.4	Free excitons at high densities	
4.5	Frenkel excitons	
4.5.1	Rare gas crystals	
4.5.2	Alkali halides	
4.5.3	Molecular crystals	
<b>5</b>	<b>Luminescence</b>	
5.1	Light emission in solids	
5.2	Interband luminescence	
5.2.1	Direct gap materials	
5.2.2	Indirect gap materials	
5.3	Photoluminescence	
5.3.1	Excitation and relaxation	1
5.3.2	Low carrier densities	1
5.3.3	Degeneracy	1
5.3.4	Photoluminescence spectroscopy	1
5.4	Electroluminescence	1
5.4.1	General principles of electroluminescent devices	1
5.4.2	Light emitting diodes	1
5.4.3	Diode lasers	1
<b>6</b>	<b>Semiconductor quantum wells</b>	<b>1</b>
6.1	Quantum confined structures	1
6.2	Growth and structure of semiconductor quantum wells	1
6.3	Electronic levels	1
6.3.1	Separation of the variables	1
6.3.2	Infinite potential wells	1
6.3.3	Finite potential wells	1
6.4	Optical absorption and excitons	1

6.4.1	Selection rules	125
6.4.2	Two-dimensional absorption	127
6.4.3	Experimental data	129
6.4.4	Excitons in quantum wells	130
6.5	The quantum confined Stark effect	131
6.6	Optical emission	133
6.7	Intersubband transitions	135
6.8	Bloch oscillators	135
6.9	Quantum dots	136
6.9.1	Semiconductor doped glasses	137
6.9.2	Self-organized III–V quantum dots	138
<b>7</b>	<b>Free electrons</b>	<b>143</b>
7.1	Plasma reflectivity	143
7.2	Free carrier conductivity	145
7.3	Metals	147
7.3.1	The Drude model	148
7.3.2	Interband transitions in metals	151
7.4	Doped semiconductors	154
7.4.1	Free carrier reflectivity and absorption	154
7.4.2	Impurity absorption	158
7.5	Plasmons	160
<b>8</b>	<b>Molecular materials</b>	<b>165</b>
8.1	Introduction to molecular materials	166
8.2	Electronic states in conjugated molecules	167
8.3	Optical spectra of molecules	169
8.3.1	Electronic–vibrational transitions	170
8.3.2	Molecular configuration diagrams	171
8.3.3	The Franck–Condon principle	173
8.3.4	Experimental spectra	176
8.4	Aromatic hydrocarbons	177
8.5	Conjugated polymers	179
8.6	Organic optoelectronics	181
	<b>Luminescence centres</b>	<b>186</b>
9.1	Vibronic absorption and emission	186
9.2	Colour centres	189
9.3	Paramagnetic impurities in ionic crystals	192
9.3.1	The crystal field effect and vibronic coupling	192
9.3.2	Rare earth ions	193
9.3.3	Transition metal ions	195
9.4	Solid state lasers and optical amplifiers	196
9.5	Phosphors	199
	<b>Phonons</b>	<b>204</b>
10.1	Infrared active phonons	204
10.2	Infrared reflectivity and absorption in polar solids	206
10.2.1	The classical oscillator model	206
10.2.2	The Lyddane–Sachs–Teller relationship	209

10.2.3	Reststrahlen	210
10.2.4	Lattice absorption	213
10.3	Polaritons	214
10.4	Polarons	215
10.5	Inelastic light scattering	218
10.5.1	General principles of inelastic light scattering	218
10.5.2	Raman scattering	220
10.5.3	Brillouin scattering	222
10.6	Phonon lifetimes	222
<b>11</b>	<b>Nonlinear optics</b>	<b>227</b>
11.1	The nonlinear susceptibility tensor	227
11.2	The physical origin of optical nonlinearities	230
11.2.1	Non-resonant nonlinearities	230
11.2.2	Resonant nonlinearities	234
11.3	Second-order nonlinearities	236
11.3.1	Nonlinear frequency mixing	237
11.3.2	Crystal symmetry	239
11.3.3	Phase matching	241
11.4	Third-order nonlinear effects	243
11.4.1	Overview of third-order phenomena	243
11.4.2	Isotropic third-order nonlinear media	247
11.4.3	Resonant nonlinearities in semiconductors	249
<b>A</b>	<b>Electromagnetism in dielectrics</b>	<b>255</b>
A.1	Electromagnetic fields and Maxwell's equations	255
A.2	Electromagnetic waves	258
<b>B</b>	<b>Quantum theory of radiative absorption and emission</b>	<b>263</b>
B.1	Einstein coefficients	263
B.2	Quantum transition rates	266
B.3	Selection rules	269
<b>C</b>	<b>Band theory</b>	<b>271</b>
C.1	Metals, semiconductors and insulators	271
C.2	The nearly free electron model	273
C.3	Example band structures	276
<b>D</b>	<b>Semiconductor p-i-n diodes</b>	<b>280</b>
	<b>Solutions to exercises</b>	<b>282</b>
	<b>Bibliography</b>	<b>290</b>
	<b>Symbols</b>	<b>295</b>
	<b>Index</b>	<b>297</b>
