Symbols and Abbreviations	xv

<b>Chapter 1. Thin-Film Technology</b>	<b>1</b>
1.1 Applications	1
1.2 Process Steps	3
1.3 Conclusion	7
1.4 Exercise	7
<b>Chapter 2. Gas Kinetics</b>	<b>9</b>
2.1 Vapors and Gases	9
2.2 Maxwell-Boltzmann Distribution	12
2.3 Molecular Impingement Flux	15
2.4 Ideal-Gas Law	17
2.5 Units of Measurement	20
2.6 Knudsen Equation	21
2.7 Mean Free Path	23
2.8 Transport Properties	25
2.8.1 Diffusion	27
2.8.2 Viscosity	28
2.8.3 Heat conduction	29
2.9 Conclusion	32
2.10 Exercises	33
2.11 References	33
2.12 Recommended Readings	34
<b>Chapter 3. Vacuum Technology</b>	<b>35</b>
3.1 Pump Selection and Exhaust Handling	36
3.2 Problem Gases	40
3.3 Gas Throughput	41

## Contents

3.4	Contamination Sources	45
3.4.1	Oil backstreaming	46
3.4.2	Gas evolution	50
3.4.3	Dust	54
3.5	Pressure Measurement	55
3.6	Conclusion	60
3.7	Exercises	61
3.8	References	62
3.9	Recommended Readings	62
<b>Chapter 4. Evaporation</b>		<b>63</b>
4.1	Thermodynamics of Evaporation	63
4.2	Evaporation Rate	71
4.3	Alloys	74
4.4	Compounds	77
4.5	Sources	81
4.5.1	Basic designs	81
4.5.2	Contamination	84
4.5.3	Temperature control	85
4.5.4	Energy enhancement	90
4.6	Transport	94
4.7	Vapor Flux Monitoring	98
4.8	Deposition Monitoring	100
4.8.1	Mass deposition	101
4.8.2	Optical techniques	105
4.9	Conclusion	115
4.10	Exercises	115
4.11	References	117
4.12	Recommended Readings	118
<b>Chapter 5. Deposition</b>		<b>119</b>
5.1	Adsorption	120
5.2	Surface Diffusion	129
5.3	Nucleation	139
5.3.1	Surface energy	139
5.3.2	Three-dimensional nucleation	145
5.3.3	Two-dimensional nucleation	154
5.3.4	Texturing	156
5.4	Structure Development	159
5.4.1	Quenched growth	161
5.4.2	Thermally activated growth	170
5.4.3	Amorphous films	177
5.4.4	Composites	179
5.5	Interfaces	180
5.6	Stress	185
5.6.1	Physics	186
5.6.2	Problems	193
5.6.3	Intrinsic stress	196
5.7	Adhesion	197

Temperature Control	200
5.8.1 Radiation	202
5.8.2 Gas conduction	208
5.8.3 Measurement	211
Conclusion	215
Exercises	215
References	217
Recommended Readings	219
<b>Chapter 6. Epitaxy</b>	<b>221</b>
Symmetry	221
Applications	226
6.2.1 Semiconductor devices	230
Disruption	237
Growth Monitoring	241
6.4.1 Electron spectroscopy	242
6.4.2 Diffraction	246
Composition Control	259
6.5.1 Precipitates	260
6.5.2 Alloys	262
6.5.3 Point defects and surface structure	263
6.5.4 Gaseous sources	266
6.5.5 Flux modulation	268
6.5.6 Doping	273
Lattice Mismatch	279
Surface Morphology	293
6.7.1 Two-dimensional nucleation	293
6.7.2 Three-dimensional rearrangement	296
6.7.3 Statistical roughening	299
Conclusion	300
Exercises	301
References	302
Recommended Readings	306
<b>Chapter 7. Chemical Vapor Deposition</b>	<b>307</b>
Supply	309
7.1 Safety	311
7.2 Flow control	312
7.3 Contamination	315
Convection	317
7.2.1 Laminar flow in ducts	318
7.2.2 Axisymmetric flow	322
7.2.3 Free convection	327
Reaction	330
7.3.1 Chemical equilibrium	330
7.3.2 Gas-phase rate	336
7.3.3 Surface processes	344
Adsorption	353
7.4.1 Diffusion-limited deposition	355

7.4.2	Reactor models	358
7.4.3	Temperature gradients	363
7.5	Conclusion	365
7.6	Exercises	365
7.7	References	367
7.8	Recommended Readings	369
<b>Chapter 8. Energy Beams</b>		<b>371</b>
8.1	Electron Generation	374
8.2	Electron Beams	382
8.3	Arc Plasmas	387
8.4	Pulsed Lasers	394
8.5	Ion Bombardment	400
8.5.1	Surface effects	402
8.5.2	Subsurface effects	411
8.5.3	Bulk-film modification	423
8.5.4	Sputtering	431
8.6	Conclusion	446
8.7	Exercises	447
8.8	References	449
8.9	Recommended readings	452
<b>Chapter 9. Glow-Discharge Plasmas</b>		<b>453</b>
9.1	Electron-Impact Reactions	454
9.2	Plasma Structure	462
9.3	DC Excitation	470
9.3.1	Parallel-plate configuration	470
9.3.2	Chemical-activation applications	473
9.3.3	Sputtering	476
9.3.4	Magnetrons	482
9.4	Frequency Effects	489
9.4.1	Low-frequency regime	491
9.4.2	Transition to high frequency	494
9.4.3	RF bias	499
9.4.4	Power coupling	503
9.5	Electrodeless Excitation	507
9.5.1	Microwaves	508
9.5.2	Helicons	518
9.5.3	Inductive coils	521
9.6	Plasma Chemistry	524
9.6.1	Kinetics	526
9.6.2	Macroparticles	533
9.6.3	Downstream deposition	536
9.6.4	Case studies	541
9.7	Conclusion	549
9.8	Exercises	550
9.9	References	551
9.10	Suggested Readings	555

<b>Chapter 10. Film Analysis</b>	<b>557</b>
<b>10.1 Structure</b>	<b>558</b>
10.1.1 Thickness	558
10.1.2 Surface topography	560
10.1.3 Bulk inhomogeneity	563
10.1.4 Crystallography	564
10.1.5 Bonding	566
10.1.6 Point defects	568
<b>10.2 Composition</b>	<b>570</b>
10.2.1 Electrons and x-rays	571
10.2.2 Mass spectrometry	572
10.2.3 Rutherford backscattering	572
10.2.4 Hydrogen	573
<b>10.3 Properties</b>	<b>574</b>
10.3.1 Optical behavior	575
10.3.2 Electrical behavior	575
10.3.3 Mechanical behavior	581
<b>10.4 Conclusion</b>	<b>583</b>
<b>10.5 References</b>	<b>583</b>
<b>10.6 Recommended Reading</b>	<b>584</b>
<b>Appendix A Units</b>	<b>585</b>
<b>Appendix B Vapor Pressures of the Elements</b>	<b>587</b>
<b>Appendix C Sputtering Yields of the Elements</b>	<b>591</b>
<b>Appendix D Characteristics of Tungsten Filaments</b>	<b>593</b>
<b>Appendix E Sonic Orifice Flow</b>	<b>597</b>
<b>Index</b>	<b>599</b>
