

CONTENTS

PREFACE	xiii
1 Perspective and History	1
1.1 Historical Aspects	1
1.2 Complementary Nature of the Techniques	2
1.3 Format and Purpose of the Book	3
1.4 References	4
2 Fundamentals	6
2.1 Description of an Electromagnetic Wave	6
2.2 The Effect of Matter on Electromagnetic Waves	8
2.2.1 The Complex Index of Refraction	8
2.2.2 Laws of Reflection and Refraction	10
2.3 Polarized Light	11
2.3.1 Sources	11
2.3.2 Linearly Polarized Light	11
2.3.3 Elliptically Polarized Light	12
2.3.4 Application of Elliptically Polarized Light	14
2.4 The Reflection of Light	14
2.4.1 Orientation	14
2.4.2 The Reflection Equations of Fresnel	15
2.4.3 The Brewster Angle	15
2.4.4 Reflections with Films	18
2.5 Ellipsometry and Reflectometry Definitions	19
2.5.1 Reflectance	19
2.5.2 Delta and Psi	20
2.5.3 The Fundamental Equation of Ellipsometry	20
2.6 References	21
3 Optical Properties of Materials and Layered Structures	23
3.1 The Physical Meaning of the Optical Constants	23
3.2 Conventions and More Basics	24

3.3	The Lorentz Oscillator	26
3.4	Insulators	28
3.5	Semiconductors	29
3.6	Metals	31
3.7	Kramers–Kronig Relations	33
3.8	Miscellaneous	33
3.9	References	34
4	Instrumentation	35
4.1	Introduction	35
4.2	Reflectometry in General	35
4.3	Reflectometer Hardware Configurations	36
4.4	Reflectometer Components	39
4.4.1	Sources	39
4.4.2	Beamsplitter	39
4.4.3	Lenses	39
4.4.4	Monochromators and Detectors	39
4.5	Ellipsometry in General	40
4.6	Optical Components Used in Ellipsometers	40
4.6.1	Sources	40
4.6.2	Polarizers	41
4.6.3	Compensators	42
4.6.4	Monochromators	42
4.6.5	Detectors	44
4.7	Ellipsometer Hardware Configurations	44
4.7.1	Null Ellipsometry	44
4.7.2	Rotating Element Photometric Ellipsometry	45
4.7.3	Modulation Ellipsometry	48
4.8	Single Wavelength Ellipsometers	49
4.9	Spectroscopic Ellipsometers	49
4.10	Instrument Parameter Characterization	50
4.11	Research vs. Production Ellipsometry	50
4.12	Errors in Reflectance and Ellipsometric Measurements	52
4.13	References	53
5	The Anatomy of a Reflectance Spectrum	54
5.1	General	54
5.2	Spectra for Substrates Only	54
5.3	With a Film: The Effect of Wavelength	55
5.4	Contribution of Film Thickness	57

5.5	Contribution of the Optical Constant Spectra of Film and Substrate	59
5.6	Summary	61
6	Aspects of Single-Wavelength Ellipsometry	62
6.1	General	62
6.2	Substrates: Delta and Psi and the Optical Constants	62
6.3	Calculating Delta/Psi Trajectories	66
6.4	Delta/Psi Trajectories for Transparent Films	67
6.5	Delta/Psi Trajectories for Absorbing Films	71
6.6	Trajectories for Two-Film Structures	72
6.7	Key Issues	73
6.8	References	74
7	The Anatomy of an Ellipsometric Spectrum	75
7.1	General	75
7.2	Typical Spectra	75
7.3	Spectra for Substrates Only	77
7.4	With a Film: Single-Wavelength Considerations	77
7.5	Effect of Wavelength	79
7.6	Contribution of the Optical Constant Spectra of Film and Substrate	81
7.7	Contribution of Film Thickness	82
7.8	Summary	83
7.9	References	84
8	Analytical Methods and Approach	85
8.1	General Approach	85
8.2	Sample Positioning	85
8.3	How Much Data?	86
8.3.1	Wavelength	86
8.3.2	Angle of Incidence	87
8.4	Analytical Methods	88
8.4.1	General	88
8.4.2	Tabulated Optical Constants	89
8.4.3	Simple Mixtures of Tabulated Optical Constants	90
8.4.4	Dispersion Relationships	93
8.4.5	Point-by-Point Optical Constants	95
8.4.6	Regression Process	96
8.5	Summary	97
8.6	References	97

9	Optical Data Analysis	98
9.1	Introduction	98
9.2	Direct Calculation	99
9.3	Regression Analysis Methods	101
9.3.1	The Problem	101
9.3.2	The Merit Function	101
9.3.3	The Regression Algorithm	102
9.4	Hybrid Methods	103
9.5	Goodness of Fit	103
9.6	Uniqueness	104
9.7	Combined Analysis of Multiple Data Types	105
9.8	Multiple Sample Analysis	106
9.9	Errors—Systematic and Random	106
9.10	References	107
10	Quality Assurance	108
10.1	General	108
10.2	Precision vs. Accuracy	108
10.3	Standards	109
10.4	Quality Assurance Measurements	110
10.5	References	112
11	Very Thin Films	113
11.1	Introduction	113
11.2	Determining Thickness	113
11.2.1	For Reflectance	113
11.2.2	For Ellipsometry	115
11.3	Determining Optical Constants	117
11.4	Distinguishing Between Materials	118
11.5	References	122
12	Roughness	123
12.1	Introduction	123
12.2	Roughness in General	123
12.3	Approximation of Surface Roughness as an Oxide Layer	124
12.4	Effective Medium Approximations (EMAs)	125
12.5	Examples	126
12.5.1	Polysilicon	126
12.5.2	Sensitivity in the Visible	127
12.5.3	Roughness Effects when Determining Optical Constants	128
12.5.4	SOI Interface Roughness	128
12.6	References	130

PROTOTYPICAL ANALYSES

No. 1 Thermal Oxide, LPCVD Nitride, or Photoresist on Silicon	133
PA1.1 Salient Feature	133
PA1.2 Thinner Films	133
PA1.3 Intermediate Films	135
PA1.4 Thicker Films	136
No. 2 Silicon Oxynitrides, PECVD Silicon Oxides, and Polysilicon	138
PA2.1 Salient Feature	138
PA2.2 Polysilicon	138
PA2.3 PECVD Silicon Oxides	141
PA2.4 Silicon Oxynitrides	142
PA2.5 References	146
No. 3 PECVD Silicon Nitride, Silicon Dioxide, and Photoresist on Silicon	147
PA3.1 Salient Feature	147
PA3.2 Cauchy Modeling	147
No. 4 LPCVD Polysilicon and Amorphous Silicon	155
PA4.1 Salient Feature	155
PA4.2 The Problem	155
PA4.3 The Optical Constants	155
PA4.4 Using the EMA Model	156
PA4.5 Using the Lorentz Oscillator Dispersion Model	156
PA4.6 References	160
No. 5 Substrate Optical Constant Determination	161
PA5.1 Salient Feature	161
PA5.2 Aluminum	161
PA5.3 Glass	163
No. 6 Analysis of Films on Transparent Substrates	166
PA6.1 Salient Feature	166
PA6.2 The Structure of the Example	166
PA6.3 Transmission	166
PA6.4 Reflection	167
PA6.5 Ellipsometry	169
PA6.6 Reverse Ellipsometry	170
PA6.7 Summary	171
PA6.8 References	172

No. 7 Very Thick Films	173
PA7.1 Salient Feature	173
PA7.2 Thick Photoresist on Silicon—Reflectometry	173
PA7.3 Thick Photoresist on Glass—Ellipsometry	175
PA7.4 Conclusion	176
No. 8 Compositional Analysis of Materials	178
PA8.1 Salient Feature	178
PA8.2 Background	178
PA8.3 GaAs/AlGaAs/GaAs	179
PA8.4 References	180
No. 9 Thin Metal Films	181
PA9.1 Salient Feature	181
PA9.2 Background	181
PA9.3 Thin Titanium on Silicon	182
PA9.4 Thin Titanium Nitride on Oxide on Silicon	182
PA9.5 Using Multiple Films of Thin Metal	184
PA9.6 Comments and Summary	187
PA9.7 References	187
No. 10 Photoresist Optical Constants	188
PA10.1 Salient Feature	188
PA10.2 Background	188
PA10.3 Photoresist on Silicon	189
PA10.4 Summary	190

APPENDICES

A Regression Algorithms	195
A.1 The Merit Function	195
A.2 The Analysis Procedure	195
A.3 The Algorithms	196
A.4 The Combination	197
A.5 References	198
B Maxwell's Equations and the Wave Equation	199
B.1 Introduction	199
B.2 Differential Equation Form of Maxwell's Equations	201
B.3 The Wave Equation	201

B.3.1 Dielectric Media	201
B.3.2 Including Conductors	204
B.3.3 The Magnetic Field Wave	205
B.4 References	207
B.5 Vector Calculus Notation Review	207
B.5.1 Vector Algebra	207
B.5.2 Scalar and Vector Fields	208
B.5.3 Vector Calculus	208
C Snell's Law, Fresnel's Equations, and the Total Reflection Coefficient Derivations and Historical Perspective	212
C.1 Introduction	212
C.2 Reflection and Refraction (Snell's Law)	212
C.3 Fresnel's Reflection and Transmission Coefficients	216
C.4 Using the Complex Index of Refraction	220
C.5 Total Reflection Coefficient for a Film on a Substrate	221
C.6 References	224
INDEX	225
