

CONTENTS

1. INTRODUCTION	1
1.1. Background	1
1.1.1. Developments in Member States	1
1.1.2. Previous IAEA publications	5
1.2. Objectives	6
1.3. Scope.....	6
1.4. Structure.....	8
2. DEFINITIONS, TERMS AND FORMATS FOR SMR DESIGN DESCRIPTION	8
2.1. Definitions and terms	8
2.1.1. Small and medium sized reactors (SMRs).....	8
2.1.2. Innovative design	9
2.1.3. Safety related terms.....	9
2.1.4. Proliferation resistance related terms.....	12
2.1.5. Design and regulatory status	12
2.1.6. Enabling technologies.....	14
2.2. Formats for SMR design description	14
3. SUMMARY OF INNOVATIVE SMRs	14
3.1. Innovative SMRs included in this report	14
3.1.1. Water cooled SMRs	14
3.1.2. Gas cooled SMRs.....	30
3.1.3. Liquid metal cooled SMRs	32
3.1.4. Non-conventional SMRs.....	34
3.2. Innovative SMRs not included in this report	34
4. SUMMARY OF THE TECHNICAL FEATURES	35
4.1. Introduction.....	35
4.2. Technical features and technological approaches used to improve SMR economy	35
4.2.1. Water cooled SMRs	36
4.2.2. Gas cooled SMRs.....	36
4.2.3. Liquid metal cooled SMRs	37
4.2.4. Non-conventional SMRs.....	37
4.2.5 Summary of targeted economic characteristic	37
4.3. Provisions for effective resource utilization, waste management, and minimum adverse environmental impacts	39
4.3.1. Water cooled SMRs	39
4.3.2. Gas cooled SMRs.....	40
4.3.3. Liquid metal cooled SMRs	41
4.3.4. Non-conventional SMRs.....	41
4.4. Summary of innovative safety features.....	41
4.4.1. Water cooled SMRs	42
4.4.2. Gas cooled SMRs.....	43
4.4.3. Liquid metal cooled SMRs	44
4.4.4. Non-conventional SMRs.....	46

4.5.	Technical features and technological approaches that support proliferation resistance of innovative SMRs.....	47
4.5.1.	Water cooled SMRs	47
4.5.2.	Gas cooled SMRs.....	48
4.5.3.	Liquid metal cooled SMRs	48
4.5.4.	Non-conventional SMRs.....	49
4.6.	Technical features and technological approaches that facilitate physical protection of innovative SMRs.....	49
4.6.1.	Water cooled SMRs	49
4.6.2.	Gas cooled SMRs.....	50
4.6.3.	Liquid metal cooled SMRs	50
4.6.4.	Non-conventional SMRs.....	51
4.7.	Conclusion to Section 4	51
5.	ENABLING TECHNOLOGIES THAT REQUIRE FURTHER R&D	51
5.1.	Introduction.....	51
5.2.	R&D for reactor core and fuel design.....	52
5.3.	R&D for reactor internals and primary circuit.....	52
5.4.	R&D for power circuit	52
5.5.	R&D for safety concept, safety features and systems.....	53
5.6.	R&D for technologies of fuel and materials fabrication, fuel reprocessing and waste disposal	53
5.7.	R&D for technologies of core refuelling, plant maintenance and in-service inspection	53
5.8.	R&D for technologies and issues of NPP licensing, construction, operation and decommissioning	53
5.9.	R&D for calculation technologies and data sets	54
5.10.	Available and planned tests facilities.....	54
5.11.	Technologies for non-electric applications.....	54
6.	NON-TECHNICAL FACTORS AND ARRANGEMENTS THAT COULD FACILITATE DEVELOPMENT AND DEPLOYMENT OF INNOVATIVE SMRs.....	56
6.1.	Summary of the design descriptions	56
6.2.	Addressing specific needs of certain markets at the design stage	57
7.	PROGRAMMES FOR INNOVATIVE SMR DEVELOPMENT IN MEMBER STATES	58
7.1.	Argentina.....	58
7.2.	China	59
7.3.	France.....	59
7.4.	India	59
7.5.	Italy	59
7.6.	Japan	60
7.7.	Republic of Korea.....	62
7.8.	Netherlands	63
7.9.	South Africa	63
7.10.	The Russian Federation.....	64
7.11.	The United States of America.....	66

APPENDIX I:	Outline for SMR design description (full description)	69
APPENDIX II:	Outline for SMR design description (short description).....	73
APPENDIX II:	Crosscut tables of ongoing and planned R&D; available or planned test facilities.....	75
REFERENCES	89

DESIGN DESCRIPTIONS OF INNOVATIVE SMRs WITH CONVENTIONAL REFUELLING SCHEME

DESIGN DESCRIPTIONS OF WATER COOLED SMRs

ANNEX I:	System-integrated modular advanced reactor (SMART), KAERI, Republic of Korea.....	93
ANNEX II:	International reactor innovative and secure (IRIS), International Consortium led by Westinghouse, United States of America	117
ANNEX III:	Central Argentina De Elementos Modulares (CAREM), CNEA, Argentina	141
ANNEX IV:	Multipurpose advanced reactor, inherently safe (MARS), The University of Rome “La Sapienza”, Italy	163
ANNEX V:	Simple compact reactor (SCOR), CEA, France.....	195
ANNEX VI:	Integrated modular water reactor (IMR) Mitsubishi Heavy Industries, Japan	225
ANNEX VII:	Water cooled modular power reactor (VBER-300) OKBM, Russian Federation	243
ANNEX VIII:	Water cooled and moderated natural circulation boiling water reactor (VK-300), RDIPE, Russian Federation	287
ANNEX IX:	Compact containment boiling water reactor (CCR), Toshiba Corporation, Japan	311
ANNEX X:	Reduced moderation water reactor of 300 MW(e) (RMWR), Hitachi Ltd, JAERI, JAPC, TITech, Japan	335
ANNEX XI:	Advanced heavy water reactor (AHWR), BARC, India	357
ANNEX XII:	Reactor facility for district heating with atmospheric pressure in the primary circuit (RUTA-70), NIKIET, Russian Federation	379

ANNEX XIII:	Concept of a passive-safety reactor (KAMADO), CRIEPI, Japan.....	405
-------------	---	-----

DESIGN DESCRIPTIONS OF GAS COOLED SMRs

ANNEX XIV:	Pebble bed modular reactor (PBMR), PBMR, Ltd, South Africa	419
ANNEX XV:	Gas turbine modular helium reactor (GT-MHR), General Atomics, United States of America.....	451
ANNEX XVI:	Gas turbine high temperature reactor 300 (GTHTR300), JAERI, Japan.....	487
ANNEX XVII:	High temperature gas cooled reactor – pebble bed module (HTR-PM), INET, China.....	509
ANNEX XVIII:	FAPIG high temperature gas cooled reactor (FAPIG-HTGR), FUJI Electric, Japan	531
ANNEX XIX:	Advanced atomic cogenerator for industrial applications (ACACIA), NRG, Netherlands.....	535

DESIGN DESCRIPTIONS OF LIQUID METAL COOLED SMRs

ANNEX XX:	Korea advanced liquid metal reactor (KALIMER) KAERI, Republic of Korea.....	553
ANNEX XXI:	Modular plant with sodium cooled fast reactor (BMN-170), OKBM, Russian Federation.....	579
ANNEX XXII:	Modular double pool liquid metal cooled fast breeder reactor (MDP), CRIEPI, Japan	601
ANNEX XXIII:	Lead-bismuth cooled reactor with a high level of natural circulation (RBEC-M), RRC “Kurchatov Institute”, Russian Federation	615
ANNEX XXIV:	Liquid metal cooled fast reactor for waste transmutation and power production (PEACER), Seoul National University, Republic of Korea	645
ANNEX XXV:	Medium scale lead-bismuth cooled reactor, JNC, Japan	669

DESIGN DESCRIPTIONS OF NON-CONVENTIONAL SMRs

ANNEX XXVI:	The advanced high temperature reactor (AHTR), Oak Ridge National Laboratory, Sandia National Laboratories and University of California, Berkeley, United States of America	675
