Preface	xi
<b>PART I BASIS OF SINTERING SCIENCE</b>	<b>1</b>
<b>1 Sintering Processes</b>	<b>3</b>
1.1 What is Sintering?	3
1.2 Categories of Sintering	4
1.3 Driving Force and Basic Phenomena	6
1.4 Sintering Variables	7
<b>2 Thermodynamics of the Interface</b>	<b>9</b>
2.1 Surface Energy and Adsorption	9
2.1.1 Surface Energy	9
2.1.2 Surface Energy and Thermodynamic Potential	11
2.1.3 Relative Adsorption	11
2.2 Surface Tension and Surface Energy	12
2.3 Thermodynamics of Curved Interfaces	14
2.3.1 Capillarity and Atom Activity	14
2.3.2 Application to Sintering: Condensed and Dispersed Phases	16
2.3.3 Energy Change Due to a Curved Interface	17
<b>3 Polycrystalline Microstructures</b>	<b>19</b>
3.1 Interfacial Tension and Microstructure	19
3.1.1 Wetting Angle	19
3.1.2 Dihedral Angle	20
3.2 Single-Phase Microstructures	21
3.3 Multiphase Microstructures	25
<b>Problems</b>	<b>30</b>
<b>General References for Sintering Science</b>	<b>34</b>
<b>References</b>	<b>35</b>

<b>PART II</b>	<b>SOLID STATE SINTERING MODELS AND DENSIFICATION</b>	<b>37</b>
<b>4</b>	<b>Initial Stage Sintering</b>	<b>39</b>
4.1	Two-Particle Model	39
4.1.1	Geometrical Relationships	39
4.1.2	Driving Force and Mechanisms of Sintering in the Two-Particle Model	41
4.1.3	Atom Diffusion and Diffusion Equations	43
4.1.4	General Features of the Sintering Model and its Limitations	44
4.2	Sintering Kinetics	45
4.2.1	Lattice Diffusion from Grain Boundaries	46
4.2.2	Grain Boundary Diffusion from Grain Boundaries	46
4.2.3	Viscous Flow	47
4.2.4	Surface Diffusion from Particle Surfaces	48
4.2.5	Lattice Diffusion from Particle Surfaces	48
4.2.6	Evaporation/Condensation	48
4.2.7	Gas Diffusion	49
4.3	Sintering Diagrams	50
4.4	Effect of Sintering Variables on Sintering Kinetics	51
4.4.1	Particle Size	53
4.4.2	Temperature	53
4.4.3	Pressure	54
4.4.4	Chemical Composition	54
4.5	Usefulness and Limitations of the Initial Stage Sintering Theory	54
<b>5</b>	<b>Intermediate and Final Stage Sintering</b>	<b>57</b>
5.1	Intermediate Stage Model	57
5.1.1	Lattice Diffusion	58
5.1.2	Grain Boundary Diffusion	59
5.2	Final Stage Model	59
5.3	Entrapped Gases and Densification	63
5.4	Sintering Pressure at Final Stage Sintering	65
5.5	Powder Packing and Densification	66
5.6	Pressure-Assisted Sintering	67
5.6.1	Driving Force of Pressure-Assisted Sintering	69
5.6.2	Sintering Mechanisms in Pressure-Assisted Sintering	70
5.7	Constrained Sintering	74
	<b>Problems</b>	<b>77</b>
	<b>References</b>	<b>84</b>

---

<b>PART III</b>	<b>GRAIN GROWTH</b>	<b>89</b>
<b>6</b>	<b>Normal Grain Growth and Second-Phase Particles</b>	<b>91</b>
6.1	Normal Grain Growth	91
6.2	Effect of Second-Phase Particles on Grain Growth: Zener Effect	95
<b>7</b>	<b>Grain Boundary Segregation and Grain Boundary Migration</b>	<b>97</b>
7.1	Solute Segregation at Grain Boundaries	97
7.2	Effect of Solute Segregation on Grain Boundary Migration	99
<b>8</b>	<b>Interface Migration under Chemical Inequilibrium</b>	<b>105</b>
8.1	General Phenomena	105
8.2	Driving Force of Diffusion-Induced Interface Migration (DIIM)	106
8.3	Quantitative Analysis of DIIM	110
8.4	Microstructural Characteristics of DIIM and its Application	112
<b>9</b>	<b>Abnormal Grain Growth</b>	<b>117</b>
9.1	Phenomenological Theory of Abnormal Grain Growth in Single-Phase Systems	118
9.2	Interfacial Energy Anisotropy and Abnormal Grain Growth	119
9.2.1	Single-Phase Systems	119
9.2.2	Two-Phase Systems	120
9.3	Abnormal Grain Growth in Chemical Inequilibrium	124
	<b>Problems</b>	<b>125</b>
	<b>References</b>	<b>129</b>
<b>PART IV</b>	<b>MICROSTRUCTURE DEVELOPMENT</b>	<b>137</b>
<b>10</b>	<b>Grain Boundary Energy and Sintering</b>	<b>139</b>
10.1	The Grain Boundary as an Atom Source	139
10.2	Effect of Grain Boundary Energy on Pore Shrinkage	140
<b>11</b>	<b>Grain Growth and Densification in Porous Materials</b>	<b>145</b>
11.1	Mobility of an Isolated Pore	145
11.2	Pore Migration and Grain Growth	147
11.3	Pore/Boundary Separation	149
11.4	Microstructure Development in a Porous Compact	153
11.4.1	Case I: $m < n$	153
11.4.2	Case II: $m = n$	155
11.4.3	Case III: $m > n$	156

11.5	Scaling Law at Final Stage Sintering	156
11.5.1	Case I: $m = n$	159
11.5.2	Case II and III: $m \neq n$ ( $m < n$ and $m > n$ )	159
11.6	Modification of Thermal Cycle and Microstructure Development	160
11.6.1	Fast Firing	160
11.6.2	Heating-Rate-Controlled Sintering	162
	<b>Problems</b>	<b>163</b>
	<b>References</b>	<b>168</b>
<b>PART V SINTERING OF IONIC COMPOUNDS</b>		<b>171</b>
<b>12</b>	<b>Sintering Additives and Defect Chemistry</b>	<b>173</b>
12.1	Point Defects in Ceramics	173
12.1.1	Frenkel Defect	174
12.1.2	Schottky Defect	174
12.1.3	Electronic Defect	175
12.2	Formation of Point Defects by Additives	176
<b>13</b>	<b>Densification and Grain Growth in Ionic Compounds</b>	<b>181</b>
13.1	Diffusion and Sintering in Ionic Compounds	181
13.2	Electrostatic Potential Effect on Interface Segregation	187
13.2.1	Pure Material without Dopant	187
13.2.2	Impure Material with Dopant	189
13.3	Solute Segregation and Grain Boundary Mobility	191
	<b>Problems</b>	<b>193</b>
	<b>References</b>	<b>195</b>
<b>PART VI LIQUID PHASE SINTERING</b>		<b>197</b>
<b>14</b>	<b>Basis of Liquid Phase Sintering</b>	<b>199</b>
14.1	Basic Phenomena of Liquid Phase Sintering	199
14.2	Capillarity in Liquid Phase Sintering	201
<b>15</b>	<b>Grain Shape and Grain Growth in a Liquid Matrix</b>	<b>205</b>
15.1	Capillary Phenomena in a Binary Two-Phase System	205
15.2	Lifshitz-Slyozov-Wagner (LSW) Theory	208
15.2.1	Grain Growth Controlled by Diffusion	210
15.2.2	Grain Growth Controlled by Interface Reaction	211
15.2.3	Verification and Limitations of LSW Theory	213
15.3	Grain Shape in a Liquid	216
15.4	Abnormal Grain Growth in a Liquid Matrix	220

---

<b>5</b>	<b>Densification Models and Theories</b>	<b>227</b>
16.1	Classical Model and Theory	227
16.1.1	Initial Stage: Particle Rearrangement	227
16.1.2	Intermediate Stage: Contact Flattening	229
16.1.3	Final Stage: Solid State Sintering	231
16.1.4	Applicability of the Classical Theory	231
16.2	Pore Filling Model and Theory	233
16.2.1	Development of the Pore Filling Model	233
16.2.2	Pore Filling Theory: Grain-Growth-Induced Densification	239
16.2.3	Microstructural Development	242
16.3	Entrapped Gases and Pore Filling	244
16.4	Powder Compacts and Densification	247
	<b>Problems</b>	<b>248</b>
	<b>References</b>	<b>253</b>
	<b>Index</b>	<b>261</b>
