

Contents

1 Gaussian integrals	1
1.1 Generating function	1
1.2 Gaussian expectation values. Wick's theorem	2
1.3 Perturbed gaussian measure. Connected contributions	6
1.4 Expectation values. Generating function. Cumulants	9
1.5 Steepest descent method	12
1.6 Steepest descent method: Several variables, generating functions	18
1.7 Gaussian integrals: Complex matrices	20
Exercises	23
2 Path integrals in quantum mechanics	27
2.1 Local markovian processes	28
2.2 Solution of the evolution equation for short times	31
2.3 Path integral representation	34
2.4 Explicit calculation: gaussian path integrals	38
2.5 Correlation functions: generating functional	41
2.6 General gaussian path integral and correlation functions	44
2.7 Harmonic oscillator: the partition function	48
2.8 Perturbed harmonic oscillator	52
2.9 Perturbative expansion in powers of \hbar	54
2.10 Semi-classical expansion	55
Exercises	59
3 Partition function and spectrum	63
3.1 Perturbative calculation	63
3.2 Semi-classical or WKB expansion	66
3.3 Path integral and variational principle	73
3.4 $O(N)$ symmetric quartic potential for $N \rightarrow \infty$	75
3.5 Operator determinants	84
3.6 Hamiltonian: structure of the ground state	85
Exercises	87
4 Classical and quantum statistical physics	91
4.1 Classical partition function. Transfer matrix	91
4.2 Correlation functions	94

4.3 Classical model at low temperature: an example	97
4.4 Continuum limit and path integral	98
4.5 The two-point function: perturbative expansion, spectral representation	102
4.6 Operator formalism. Time-ordered products	105
Exercises	107
5 Path integrals and quantization	111
5.1 Gauge transformations	111
5.2 Coupling to a magnetic field: gauge symmetry	113
5.3 Quantization and path integrals	116
5.4 Magnetic field: direct calculation	120
5.5 Diffusion, random walk, Fokker–Planck equation	122
5.6 The spectrum of the $O(2)$ rigid rotator	126
Exercises	131
6 Path integrals and holomorphic formalism	135
6.1 Complex integrals and Wick's theorem	135
6.2 Holomorphic representation	140
6.3 Kernel of operators	143
6.4 Path integral: the harmonic oscillator	146
6.5 Path integral: general hamiltonians	150
6.6 Bosons: second quantization	156
6.7 Partition function	159
6.8 Bose–Einstein condensation	161
6.9 Generalized path integrals: the quantum Bose gas	164
Exercises	169
7 Path integrals: fermions	179
7.1 Grassmann algebras	179
7.2 Differentiation in Grassmann algebras	181
7.3 Integration in Grassmann algebras	182
7.4 Gaussian integrals and perturbative expansion	184
7.5 Fermion vector space and operators	190
7.6 One-state hamiltonian	195
7.7 Many-particle states. Partition function	197
7.8 Path integral: one-state problem	200
7.9 Path integrals: Generalization	203
7.10 Quantum Fermi gas	206
7.11 Real gaussian integrals. Wick's theorem	210
7.12 Mixed change of variables: Berezinian and supertrace	212
Exercises	214
8 Barrier penetration: semi-classical approximation	225
8.1 Quartic double-well potential and instantons	225
8.2 Degenerate minima: semi-classical approximation	229
8.3 Collective coordinates and gaussian integration	232
8.4 Instantons and metastable states	238
8.5 Collective coordinates: alternative method	243
8.6 The jacobian	245

8.7 Instantons: the quartic anharmonic oscillator	247
Exercises	251
9 Quantum evolution and scattering matrix	257
9.1 Evolution of the free particle and S -matrix	257
9.2 Perturbative expansion of the S -matrix	260
9.3 S -matrix: bosons and fermions	266
9.4 S -matrix in the semi-classical limit	269
9.5 Semi-classical approximation: one dimension	270
9.6 Eikonal approximation	272
9.7 Perturbation theory and operators	276
Exercises	277
10 Path integrals in phase space	279
10.1 A few elements of classical mechanics	279
10.2 The path integral in phase space	284
10.3 Harmonic oscillator. Perturbative calculations	289
10.4 Lagrangians quadratic in the velocities	290
10.5 Free motion on the sphere or rigid rotator	294
Exercises	299
Appendix Quantum mechanics: minimal background	301
A1 Hilbert space and operators	301
A2 Quantum evolution, symmetries and density matrix	303
A3 Position and momentum. Schrödinger equation	305
Bibliography	311
Index	315
