## Chapter 0/Set Theory and Topology

1

### 0.1. SET THEORY 1

- 0.1.1. Sets 1
- 0.1.2. Set Operations 2
- 0.1.3. Cartesian Products 3
- 0.1.4. Functions 4
- 0.1.5. Functions and Set Operations 6
- 0.1.6. Equivalence Relations 7

### 0.2. TOPOLOGY 8

- 0.2.1. Topologies 8
- 0.2.2. Metric Spaces 10
- 0.2.3. Subspaces 11
- 0.2.4. Product Topologies 11
- 0.2.5. Hausdorff Spaces 12
- 0.2.6. Continuity 12
- 0.2.7. Connectedness 13
- 0.2.8. Compactness 15
- 0.2.9. Local Compactness 17
- 0.2.10. Separability 17
- 0.2.11. Paracompactness 17

## Chapter 1/Manifolds

19

- 1.1. Definition of a Manifold 19
- 1.2. Examples of Manifolds 22
- 1.3. Differentiable Maps 35
- 1.4. Submanifolds 40
- 1.5. Differentiable Curves 43
- 1.6. Tangents 47
- 1.7. Coordinate Vector Fields 50
- 1.8. Differential of a Map 55

**Chapter 2/ Tensor Algebra****59**

2.1. Vector Spaces	59
2.2. Linear Independence	61
2.3. Summation Convention	65
2.4. Subspaces	67
2.5. Linear Functions	69
2.6. Spaces of Linear Functions	71
2.7. Dual Space	75
2.8. Multilinear Functions	76
2.9. Natural Pairing	77
2.10. Tensor Spaces	78
2.11. Algebra of Tensors	79
2.12. Reinterpretations	79
2.13. Transformation Laws	83
2.14. Invariants	85
2.15. Symmetric Tensors	87
2.16. Symmetric Algebra	88
2.17. Skew-Symmetric Tensors	91
2.18. Exterior Algebra	92
2.19. Determinants	97
2.20. Bilinear Forms	100
2.21. Quadratic Forms	101
2.22. Hodge Duality	107
2.23. Symplectic Forms	111

**Chapter 3/ Vector Analysis on Manifolds****116**

3.1. Vector Fields	116
3.2. Tensor Fields	118
3.3. Riemannian Metrics	120
3.4. Integral Curves	121
3.5. Flows	124
3.6. Lie Derivatives	128
3.7. Bracket	133
3.8. Geometric Interpretation of Brackets	135
3.9. Action of Maps	138
3.10. Critical Point Theory	142
3.11. First Order Partial Differential Equations	149
3.12. Frobenius' Theorem	155

**Appendix to Chapter 3****158**

- 3A. Tensor Bundles 158
- 3B. Parallelizable Manifolds 160
- 3C. Orientability 162

**Chapter 4/Integration Theory****165**

- 4.1. Introduction 165
- 4.2. Differential Forms 166
- 4.3. Exterior Derivatives 167
- 4.4. Interior Products 170
- 4.5. Converse of the Poincaré Lemma 173
- 4.6. Cubical Chains 178
- 4.7. Integration on Euclidean Spaces 187
- 4.8. Integration of Forms 190
- 4.9. Stokes' Theorem 195
- 4.10. Differential Systems 199

**Chapter 5/Riemannian and Semi-riemannian Manifolds****206**

- 5.1. Introduction 206
- 5.2. Riemannian and Semi-riemannian Metrics 207
- 5.3. Length, Angle, Distance, and Energy 208
- 5.4. Euclidean Space 212
- 5.5. Variations and Rectangles 213
- 5.6. Flat Spaces 216
- 5.7. Affine Connexions 219
- 5.8. Parallel Translation 224
- 5.9. Covariant Differentiation of Tensor Fields 228
- 5.10. Curvature and Torsion Tensors 231
- 5.11. Connexion of a Semi-riemannian Structure 238
- 5.12. Geodesics 244
- 5.13. Minimizing Properties of Geodesics 247
- 5.14. Sectional Curvature 250

**Chapter 6/Physical Application****255**

- 6.1. Introduction 255
- 6.2. Hamiltonian Manifolds 256
- 6.3. Canonical Hamiltonian Structure on the Cotangent Bundle 259

6.4. Geodesic Spray of a Semi-riemannian Manifold 262  
6.5. Phase Space 264  
6.6. State Space 269  
6.7. Contact Coordinates 269  
6.8. Contact Manifolds 271

**Bibliography 273**

**Index 275**
