PREFACE v

Introduction 1

## Chapter I. Calculus on Euclidean Space

1. Euclidean Space 3
2. Tangent Vectors 6
3. Directional Derivatives 11
4. Curves in  $\mathbf{E}^3$  15
5. 1-Forms 22
6. Differential Forms 26
7. Mappings 32
8. Summary 41

## Chapter II. Frame Fields

1. Dot Product 42
2. Curves 51
3. The Frenet Formulas 56
4. Arbitrary-Speed Curves 66
5. Covariant Derivatives 77
6. Frame Fields 81
7. Connection Forms 85
8. The Structural Equations 91
9. Summary 96

## Chapter III. Euclidean Geometry

1. Isometries of  $\mathbf{E}^3$  98
2. The Derivative Map of an Isometry 104
3. Orientation 107
4. Euclidean Geometry 112
5. Congruence of Curves 116
6. Summary 123

**Chapter IV. Calculus on a Surface**

1. Surfaces in  $\mathbf{E}^3$  124
2. Patch Computations 133
3. Differentiable Functions and Tangent Vectors 143
4. Differential Forms on a Surface 152
5. Mappings of Surfaces 158
6. Integration of Forms 167
7. Topological Properties of Surfaces 176
8. Manifolds 182
9. Summary 187

**Chapter V. Shape Operators**

1. The Shape Operator of  $M \subset \mathbf{E}^3$  189
2. Normal Curvature 195
3. Gaussian Curvature 203
4. Computational Techniques 210
5. Special Curves in a Surface 223
6. Surfaces of Revolution 234
7. Summary 244

**Chapter VI. Geometry of Surfaces in  $\mathbf{E}^3$** 

1. The Fundamental Equations 245
2. Form Computations 251
3. Some Global Theorems 256
4. Isometries and Local Isometries 263
5. Intrinsic Geometry of Surfaces in  $\mathbf{E}^3$  271
6. Orthogonal Coordinates 276
7. Integration and Orientation 280
8. Congruence of Surfaces 297
9. Summary 303

**Chapter VII. Riemannian Geometry**

1. Geometric Surfaces 304
2. Gaussian Curvature 310
3. Covariant Derivative 318
4. Geodesics 326
5. Length-Minimizing Properties of Geodesics 339
6. Curvature and Conjugate Points 352
7. Mappings that Preserve Inner Products 362
8. The Gauss-Bonnet Theorem 372
9. Summary 389

BIBLIOGRAPHY 391

ANSWERS TO ODD-NUMBERED EXERCISES 393
