Preface xiv

## 1 ■ PROLOGUE

---

1

- 1.1 Goals 1
- 1.2 A Modeling Example 1
  - 1.2.1 Examples 6
- 1.3 Differential Equations and Solutions 9
  - 1.3.1 Some Terminology 9
  - 1.3.2 More Examples 13
  - 1.3.3 Separation of Variables: A Quick Look 15
  - 1.3.4 The Euler Method 18
  - 1.3.5 Summary 21
- 1.4 Chapter 1 Summary 21
- 1.5 Chapter Exercises 22
- 1.6 Chapter Projects 25

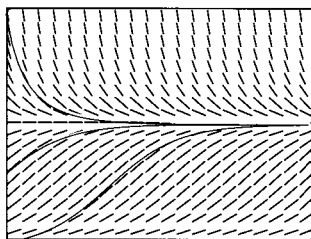

## 2 ■ MODELS FROM CONSERVATION LAWS

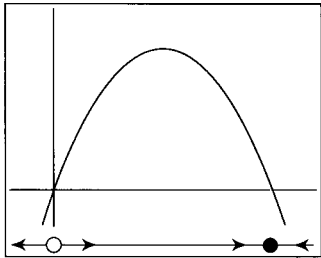

---

27

- 2.1 Simple Population Models 27
  - 2.1.1 Data 27
  - 2.1.2 A Law and Some Facts 29
  - 2.1.3 A Model 30
  - 2.1.4 Analysis 32
  - 2.1.5 Interpretation 34
  - 2.1.6 More Analysis 34
  - 2.1.7 Exercises 37
- 2.2 Emigration and Competition 41
  - 2.2.1 Emigration 41
  - 2.2.2 Competition 47
  - 2.2.3 Summary of Single-species Population Models 51
  - 2.2.4 Exercises 52
- 2.3 A Heat-flow Model 56
  - 2.3.1 Exercises 62
- 2.4 Multiple Species 65
  - 2.4.1 Predator and Prey 65
  - 2.4.2 Epidemics 69
  - 2.4.3 Competition 72
  - 2.4.4 Summary 74

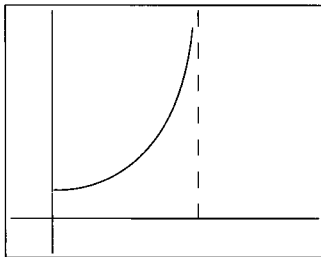

- 2.4.5 Exercises 75
- 2.5 Chapter Exercises 76
- 2.6 Chapter Projects 80

### 3 ■ NUMERICAL AND GRAPHICAL TOOLS

83

- 3.1 Numerical Methods 83
  - 3.1.1 Interpretations of the Euler method 83
  - 3.1.2 Accuracy Examples 88
  - 3.1.3 A Better Method: Heun 90
  - 3.1.4 Global and Local Error 93
  - 3.1.5 An Even Better Method: Fourth-order Runge-Kutta 99
  - 3.1.6 Numerical Stability 100
  - 3.1.7 Summary: Numerical Methods 102
  - 3.1.8 Exercises 103
- 3.2 Direction Fields and Phase Lines 108
  - 3.2.1 Solution Graphs 108
  - 3.2.2 Direction Fields 111
  - 3.2.3 Phase Lines 113
  - 3.2.4 Exercises 115
- 3.3 Steady States, Stability, and Linearization 118
  - 3.3.1 Overview 118
  - 3.3.2 Steady States and Stability 118
  - 3.3.3 Linearization 121
  - 3.3.4 Exercises 124
- 3.4 Chapter Exercises 127
- 3.5 Chapter Projects 129

### 4 ■ ANALYTIC TOOLS FOR ONE DIMENSION

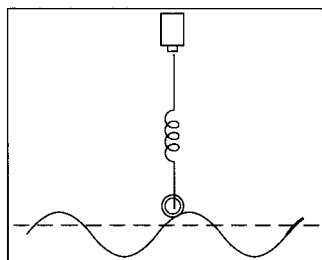

133

- 4.1 Basic Definitions 133
  - 4.1.1 Equations and Solutions 133
  - 4.1.2 Linear Equations 135
  - 4.1.3 Superposition 139
  - 4.1.4 General Solution 143
  - 4.1.5 Summary 145
  - 4.1.6 Exercises 146
- 4.2 Separation of Variables 150
  - 4.2.1 Exercises 154
- 4.3 Characteristic Equations 157
  - 4.3.1 Exercises 160
- 4.4 Undetermined Coefficients 162
  - 4.4.1 The Main Ideas 162
  - 4.4.2 The Homogeneous Solution Problem 164

- 4.4.3 The Whole Story 167
- 4.4.4 More Examples 169
- 4.4.5 Exercises 176
- 4.5 Variation of Parameters 177
  - 4.5.1 Separation of Variables and the Homogeneous Solution 177
  - 4.5.2 Variation of Parameters and the Nonhomogeneous Equation 178
  - 4.5.3 Exercises 181
- 4.6 Uniqueness and Existence 183
  - 4.6.1 Linear Equations: Existence and Uniqueness 183
  - 4.6.2 Uniqueness for Nonlinear Equations 187
  - 4.6.3 Existence for Nonlinear Equations 190
  - 4.6.4 Exercises 194
- 4.7 Chapter Exercises 197
- 4.8 Chapter Projects 200

## 5 ■ TWO-DIMENSIONAL MODELS: OSCILLATING SYSTEMS

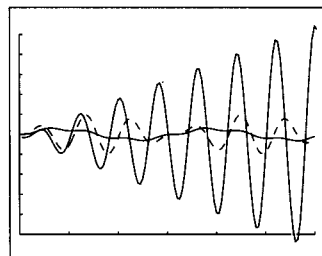

203

- 5.1 Springs and Masses 203
  - 5.1.1 An Undamped System 204
  - 5.1.2 A Damped System 207
  - 5.1.3 A Forced System 209
  - 5.1.4 Examples 210
  - 5.1.5 Preliminary Analysis 212
  - 5.1.6 Exercises 216
- 5.2 The Pendulum 219
  - 5.2.1 Preliminary Analysis 221
  - 5.2.2 Exercises 222
- 5.3 *RLC* Circuits 223
  - 5.3.1 Exercises 227
- 5.4 Chapter Exercises 229
- 5.5 Chapter Projects 231

## 6 ■ ANALYTIC TOOLS FOR TWO DIMENSIONS

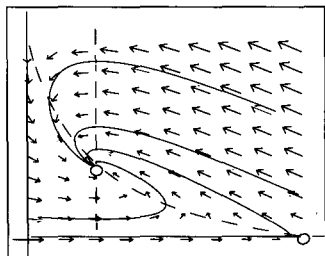

233

- 6.1 Basic Definitions 233
  - 6.1.1 Linear, Homogeneous, Etc. 233
  - 6.1.2 The Form of General Solutions 236
  - 6.1.3 Superposition 241
  - 6.1.4 Steady States and Transients 245
  - 6.1.5 Exercises 248
- 6.2 Testing Linear Independence 250
  - 6.2.1 Exercises 254

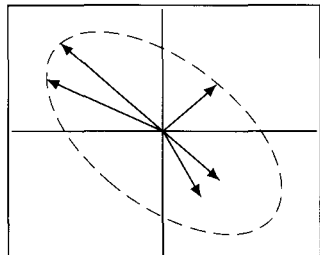

- 6.3 Characteristic Equations: Real Roots 256
  - 6.3.1 The Possibilities 256
  - 6.3.2 Distinct Real Roots 259
  - 6.3.3 Repeated Real Roots 261
  - 6.3.4 Exercises 264
- 6.4 Characteristic Equations: Complex Roots 266
  - 6.4.1 Complex Conjugate Roots 266
  - 6.4.2 More Examples 269
  - 6.4.3 Summary of Characteristic Equations 272
  - 6.4.4 Exercises 273
- 6.5 Analyzing Models Without Forcing 276
  - 6.5.1 Spring-mass Systems 276
  - 6.5.2 The Pendulum 284
  - 6.5.3 *RLC* Circuits 285
  - 6.5.4 Exercises 288
- 6.6 Undetermined Coefficients 292
  - 6.6.1 Overview 292
  - 6.6.2 Examples 294
  - 6.6.3 Exercises 305
- 6.7 Analyzing Models with Forcing 307
  - 6.7.1 Spring-mass Systems 307
  - 6.7.2 *RLC* Circuits 314
  - 6.7.3 Exercises 318
- 6.8 Linear versus Nonlinear 321
  - 6.8.1 Amplitude and Period 322
  - 6.8.2 Steady States and Stability 323
  - 6.8.3 Exercises 326
- 6.9 Chapter Exercises 329
- 6.10 Chapter Projects 332

**7 ■ GRAPHICAL TOOLS FOR TWO DIMENSIONS**

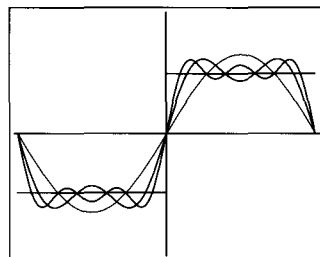

- 7.1 The Phase Plane 334
  - 7.1.1 Exercises 340
- 7.2 Nullclines and Local Linearization 343
  - 7.2.1 Nullclines 343
  - 7.2.2 Local Linearization 346
  - 7.2.3 Epidemics 349
  - 7.2.4 Exercises 351
- 7.3 Limit Cycles and Stability 354
  - 7.3.1 Exercises 357
- 7.4 Chapter Exercises 359
- 7.5 Chapter Projects 362

## 8 ■ ANALYTIC TOOLS FOR HIGHER DIMENSIONS 365

- 8.1 Basic Definitions: Systems 365
  - 8.1.1 Vector Notation 366
  - 8.1.2 Linear, Homogeneous, Etc. 369
  - 8.1.3 Linear Independence 371
  - 8.1.4 Exercises 376
- 8.2 Constant-coefficient, Homogeneous Systems 380
  - 8.2.1 Motivation 381
  - 8.2.2 Geometry: Eigenvalues and Eigenvectors 384
  - 8.2.3 Complex Eigenvalues 391
  - 8.2.4 Summary 393
  - 8.2.5 Examples of Repeated Eigenvalues 395
  - 8.2.6 Exercises 398
- 8.3 Connections with the Phase Plane 401
  - 8.3.1 Autonomous Systems and the Jacobian 402
  - 8.3.2 Real Eigenvalues 406
  - 8.3.3 Complex Eigenvalues 411
  - 8.3.4 Summary 414
  - 8.3.5 Exercises 415
- 8.4 Nonhomogeneous Systems: Variation of Parameters 419
  - 8.4.1 Exercises 422
- 8.5 Chapter Exercises 423
- 8.6 Chapter Projects 425

## 9 ■ DIFFUSION MODELS AND BOUNDARY-VALUE PROBLEMS 428

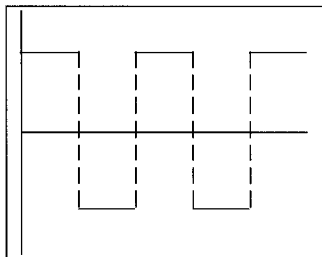

- 9.1 Diffusion Models 428
  - 9.1.1 Exercises 435
- 9.2 Boundary-value Problems: Analytic Tools 437
  - 9.2.1 Exercises 443
- 9.3 Boundary-value Problems: Numerical Methods 444
  - 9.3.1 Approximating Derivatives 444
  - 9.3.2 Approximating Differential Equations 447
  - 9.3.3 Incorporating Boundary Conditions 448
  - 9.3.4 Derivative Boundary Conditions 453
  - 9.3.5 Summary 456
  - 9.3.6 Exercises 457
- 9.4 Time-dependent Diffusion 460
  - 9.4.1 Summary 468
  - 9.4.2 Exercises 468
- 9.5 Fourier methods 469

- 9.5.1 Separation of Variables 470
- 9.5.2 Eigenfunction Expansions 474
- 9.5.3 Fourier Series 486
- 9.5.4 Summary 488
- 9.5.5 Exercises 488
- 9.6 Initial-Boundary-Value Problems: Numerical Methods 491
  - 9.6.1 Exercises 499
- 9.7 Chapter Exercises 501
- 9.8 Chapter Projects 504

**10 ■ THE LAPLACE TRANSFORM**

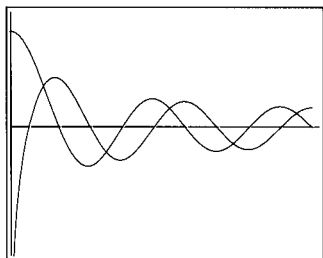

**507**

- 10.1 The Transform Idea 507
  - 10.1.1 Motivation 507
  - 10.1.2 Existence of the Laplace Transform 515
  - 10.1.3 Exercises 517
- 10.2 Inverse Transforms and Initial-value Problems 520
  - 10.2.1 Inverse of the Laplace Transform 520
  - 10.2.2 The Convolution Theorem 524
  - 10.2.3 The Shifted Transform 527
  - 10.2.4 Summary 532
  - 10.2.5 Exercises 532
- 10.3 Other Properties of Laplace Transforms 535
  - 10.3.1 Transform of a Periodic Function 535
  - 10.3.2 Derivative of a Transform 539
  - 10.3.3 Transform of an Integral 540
  - 10.3.4 Integral of a Transform 541
  - 10.3.5 Exercises 543
- 10.4 Ramps and Jumps 546
  - 10.4.1 The Unit Step Function 546
  - 10.4.2 Summary 553
  - 10.4.3 Exercises 554
- 10.5 The Unit Impulse Function 556
  - 10.5.1 Exercises 560
- 10.6 Chapter Exercises 561
- 10.7 Chapter Projects 563

**11 ■ MORE ANALYTIC TOOLS FOR TWO DIMENSIONS 568**

- 11.1 Reduction of Order 568
  - 11.1.1 Summary 572
  - 11.1.2 Exercises 572
- 11.2 Cauchy-Euler Equations 573
  - 11.2.1 Summary 579

11.2.2	Exercises	580
11.3	Variation of Parameters: Second-order Equations	581
11.3.1	Summary	587
11.3.2	Exercises	587
11.4	Power Series Methods	588
11.4.1	Existence of a Power Series Solution	597
11.4.2	Summary	601
11.4.3	Exercises	602
11.5	Regular Singular Points	604
11.5.1	Exercises	614
11.6	Solution Method Summary	616
11.7	Chapter Exercises	617
11.8	Chapter Projects	618

---

## ■ APPENDICES 621

A.1	Derivatives	621
A.2	Antiderivatives	622
A.3	Taylor's Theorem	625
A.4	Power Series	627
A.5	Matrices and Determinants	629
A.6	Cramer's Rule	634
A.7	Partial Fractions	635
A.8	How to Read a Problem	637
A.9	Appendix Exercises	640

---

## ■ BIBLIOGRAPHY 642

---

## ■ SOLUTIONS TO SELECTED EXERCISES 644

---

## ■ INDEX 679

---
