PREFACE

xxv

PART 1 BASIC REACTOR PHYSICS

1 Neutron Nuclear Reactions	3
1.1 Neutron-Induced Nuclear Fission	3
Stable Nuclides	3
Binding Energy	3
Threshold External Energy for Fission	4
Neutron-Induced Fission	5
Neutron Fission Cross Sections	5
Products of the Fission Reaction	6
Energy Release	11
1.2 Neutron Capture	13
Radiative Capture	13
Neutron Emission	20
1.3 Neutron Elastic Scattering	20
1.4 Summary of Cross-Section Data	24
Low-Energy Cross Sections	24
Spectrum-Averaged Cross Sections	25
1.5 Evaluated Nuclear Data Files	27
1.6 Elastic Scattering Kinematics	27
Correlation of Scattering Angle and Energy Loss	29
Average Energy Loss	30
2 Neutron Chain Fission Reactors	35
2.1 Neutron Chain Fission Reactions	35
Capture-to-Fission Ratio	35
Number of Fission Neutrons per Neutron	
Absorbed in Fuel	35
Neutron Utilization	36
Fast Fission	36
Resonance Escape	38

2.2	Criticality	39	
	Effective Multiplication Constant	39	
	Effect of Fuel Lumping	39	
	Leakage Reduction	40	
2.3	Time Dependence of a Neutron Fission Chain Assembly	40	
	Prompt Fission Neutron Time Dependence	40	
	Source Multiplication	41	
	Effect of Delayed Neutrons	41	
2.4	Classification of Nuclear Reactors	42	
	Physics Classification by Neutron Spectrum	42	
	Engineering Classification by Coolant	43	
3	Neutron Diffusion Theory		45
3.1	Derivation of One-Speed Diffusion Theory	45	
	Partial and Net Currents	45	
	Diffusion Theory	47	
	Interface Conditions	48	
	Boundary Conditions	48	
	Applicability of Diffusion Theory	49	
3.2	Solutions of the Neutron Diffusion Equation in Nonmultiplying Media	50	
	Plane Isotropic Source in an Infinite Homogeneous Medium	50	
	Plane Isotropic Source in a Finite Homogeneous Medium	50	
	Line Source in an Infinite Homogeneous Medium	51	
	Homogeneous Cylinder of Infinite Axial Extent with Axial Line Source	51	
	Point Source in an Infinite Homogeneous Medium	52	
	Points Source at the Center of a Finite Homogeneous Sphere	52	
3.3	Diffusion Kernels and Distributed Sources in a Homogeneous Medium	52	
	Infinite-Medium Diffusion Kernels	52	
	Finite-Slab Diffusion Kernel	53	
	Finite Slab with Incident Neutron Beam	54	
3.4	Albedo Boundary Condition	54	
3.5	Neutron Diffusion and Migration Lengths	55	
	Thermal Diffusion-Length Experiment	56	
	Migration Length	58	

3.6	Bare Homogeneous Reactor	59
	Slab Reactor	60
	Right Circular Cylinder Reactor	61
	Interpretation of Criticality Condition	62
	Optimum Geometries	64
3.7	Reflected Reactor	66
	Reflected Slab Reactor	66
	Reflector Savings	68
	Reflected Spherical, Cylindrical, and Rectangular Parallelepiped Cores	68
3.8	Homogenization of a Heterogeneous Fuel-Moderator Assembly	68
	Spatial Self-Shielding and Thermal Disadvantage Factor	71
	Effective Homogeneous Cross Sections	73
	Thermal Utilization	75
	Measurement of Thermal Utilization	75
	Local Power Peaking Factor	76
3.9	Control Rods	77
	Effective Diffusion Theory Cross Sections for Control Rods	77
	Windowshade Treatment of Control Rods	79
3.10	Numerical Solution of Diffusion Equation	81
	Finite-Difference Equations in One Dimension	82
	Forward Elimination/Backward Substitution Spatial Solution Procedure	83
	Power Iteration on Fission Source	83
	Finite-Difference Equations in Two Dimensions	84
	Successive Relaxation Solution of Two-Dimensional Finite-Difference Equations	86
	Power Outer Iteration on Fission Source	87
	Limitations on Mesh Spacing	87
3.11	Nodal Approximation	87
4	Neutron Energy Distribution	95
4.1	Analytical Solutions in an Infinite Medium	95
	Fission Source Energy Range	95
	Slowing-Down Energy Range	96
	Moderation by Hydrogen Only	97
	Energy Self-Shielding	97

	Slowing Down by Nonhydrogenic Moderators with No Absorption	98
	Slowing-Down Density	99
	Slowing Down with Weak Absorption	100
	Fermi Age Neutron Slowing Down	101
	Neutron Energy Distribution in the Thermal Range	103
	Summary	105
4.2	Multigroup Calculation of Neutron Energy Distribution in an Infinite Medium	106
	Derivation of Multigroup Equations	106
	Mathematical Properties of Multigroup Equations	108
	Solution of Multigroup Equations	109
	Preparation of Multigroup Cross-Section Sets	110
4.3	Resonance Absorption	112
	Resonance Cross Sections	112
	Doppler Broadening	114
	Resonance Integral	117
	Resonance Escape Probability	117
	Multigroup Resonance Cross Section	117
	Practical Width	117
	Neutron Flux in Resonance	118
	Narrow Resonance Approximation	118
	Wide Resonance Approximation	119
	Resonance Absorption Calculations	119
	Temperature Dependence of Resonance Absorption	123
4.4	Multigroup Diffusion Theory	123
	Multigroup Diffusion Equations	123
	Two-Group Theory	124
	Two-Group Bare Reactor	124
	One-and-One-Half-Group Theory	125
	Two-Group Theory of Two-Region Reactors	126
	Two-Group Theory of Reflected Reactors	129
	Numerical Solutions for Multigroup Diffusion Theory	129
5	Nuclear Reactor Dynamics	139
5.1	Delayed Fission Neutrons	139
	Neutrons Emitted in Fission Product Decay	139
	Effective Delayed Neutron Parameters for Composite Mixtures	141
	Photoneutrons	142

- 5.2 Point Kinetics Equations 142
- 5.3 Period-Reactivity Relations 144
- 5.4 Approximate Solutions of the Point Neutron Kinetics Equations 146
 - One Delayed Neutron Group Approximation 146
 - Prompt-Jump Approximation 149
 - Reactor Shutdown 150
- 5.5 Delayed Neutron Kernel and Zero-Power Transfer Function 151
 - Delayed Neutron Kernel 151
 - Zero-Power Transfer Function 151
- 5.6 Experimental Determination of Neutron Kinetics Parameters 153
 - Asymptotic Period Measurement 153
 - Rod Drop Method 153
 - Source Jerk Method 153
 - Pulsed Neutron Methods 154
 - Rod Oscillator Measurements 154
 - Zero-Power Transfer Function Measurements 155
 - Rossi- α Measurement 156
- 5.7 Reactivity Feedback 157
 - Temperature Coefficients of Reactivity 158
 - Doppler Effect 159
 - Fuel and Moderator Expansion Effect on Resonance Escape Probability 161
 - Thermal Utilization 162
 - Nonleakage Probability 162
 - Representative Thermal Reactor Reactivity Coefficients 163
 - Startup Temperature Defect 164
- 5.8 Perturbation Theory Evaluation of Reactivity Temperature Coefficients 164
 - Perturbation Theory 164
 - Sodium Void Effect in Fast Reactors 166
 - Doppler Effect in Fast Reactors 166
 - Fuel and Structure Motion in Fast Reactors 167
 - Fuel Bowling 167
 - Representative Fast Reactor Reactivity Coefficients 168

5.9	Reactor Stability	168	
	Reactor Transfer Function with Reactivity Feedback	168	
	Stability Analysis for a Simple Feedback Model	169	
	Threshold Power Level for Reactor Stability	171	
	More General Stability Conditions	172	
	Power Coefficients and Feedback Delay Time Constants	175	
5.10	Measurement of Reactor Transfer Functions	177	
	Rod Oscillator Method	177	
	Correlation Methods	178	
	Reactor Noise Method	179	
5.11	Reactor Transients with Feedback	181	
	Step Reactivity Insertion ($\rho_{ex} < \beta$): Prompt Jump	182	
	Step Reactivity Insertion ($\rho_{ex} < \beta$): Post-Prompt-Jump Transient	183	
5.12	Reactor Fast Excursions	184	
	Step Reactivity Input: Feedback Proportional to Fission Energy	184	
	Ramp Reactivity Input: Feedback Proportional to Fission Energy	185	
	Step Reactivity Input: Nonlinear Feedback Proportional to Cumulative Energy Release	186	
	Bethe-Tait Model	187	
5.13	Numerical Methods	189	
6	Fuel Burnup		195
6.1	Changes in Fuel Composition	185	
	Fuel Transmutation-Decay Chains	186	
	Fuel Depletion-Transmutation-Decay Equations	199	
	Fission Products	201	
	Solution of the Depletion Equations	202	
	Measure of Fuel Burnup	203	
	Fuel Composition Changes with Burnup	204	
	Reactivity Effects of Fuel-Composition Changes	205	
	Compensating for Fuel-Depletion Reactivity Effects	206	
	Reactivity Penalty	206	

	Effects of Fuel Depletion on the Power Distribution	207
	In-Core Fuel Management	208
6.2	Samarium and Xenon	209
	Samarium Poisoning	209
	Xenon Poisoning	211
	Peak Xenon	213
	Effect of Power-Level Changes	214
6.3	Fertile-to-Fissile Conversion and Breeding	215
	Availability of Neutrons	215
	Conversion and Breeding Ratios	217
6.4	Simple Model of Fuel Depletion	218
6.5	Fuel Reprocessing and Recycling	219
	Composition of Recycled LWR Fuel	219
	Physics Differences of MOX Cores	220
	Physics Considerations with Uranium Recycle	222
	Physics Considerations with Plutonium Recycle	223
	Reactor Fueling Characteristics	223
6.6	Radioactive Waste	224
	Radioactivity	224
	Hazard Potential	224
	Risk Factor	228
6.7	Burning Surplus Weapons-Grade Uranium and Plutonium	232
	Composition of Weapons-Grade Uranium and Plutonium	232
	Physics Differences Between Weapons- and Reactor-Grade Plutonium-Fueled Reactors	232
6.8	Total Energy Extraction	233
6.9	Transmutation of Spent Nuclear Fuel	235
	General Considerations	235
	Conceptual Design Studies	238
7	Nuclear Power Reactors	243
	7.1 Pressurized Water Reactors	243
	7.2 Boiling Water Reactors	246
	7.3 Pressure Tube Heavy Water-Moderated Reactors	249
	7.4 Pressure Tube Graphite-Moderated Reactors	253
	7.5 Graphite Moderated Gas-Cooled Reactors	254

7.6	Liquid-Metal Fast Breeder Reactors	257
7.7	Other Power Reactors	259
7.8	Characteristics of Power Reactors	260
7.9	Advanced Reactors	261
	Modular Passively Safe Light Water Reactors	261
	Mixed Oxide PWRs	261
	Gas-Cooled Reactors	261
	Fast Reactors	262
7.10	Nuclear Reactor Analysis	262
	Construction of Homogenized Multigroup Cross Sections	262
	Criticality and Flux Distribution Calculations	264
	Fuel Cycle Analyses	264
	Transient Analyses	265
	Core Operating Data	266
	Criticality Safety Analysis	267
7.11	Interaction of Reactor Physics and Reactor Thermal Hydraulics	267
	Power Distribution	267
	Temperature Reactivity Effects	268
	Coupled Reactor Physics and Thermal-Hydraulics Calculations	268
8	Reactor Safety	271
8.1	Elements of Reactor Safety	271
	Radionuclides of Greatest Concern	271
	Multiple Barriers to Radionuclide Release	271
	Defense in Depth	273
	Energy Sources	273
8.2	Reactor Safety Analysis	273
	Loss of Flow or Loss of Coolant	275
	Loss of Heat Sink	275
	Reactivity Insertion	275
	Anticipated Transients Without Scram	276
8.3	Quantitative Risk Assessment	276
	Probabilistic Risk Assessment	276
	Radiological Assessment	279
	Reactor Risks	279
8.4	Reactor Accidents	281
	Three Mile Island	282
	Chernobyl	285

- 8.5 Passive Safety 287
 - Pressurized Water Reactors 287
 - Boiling Water Reactors 287
 - Integral Fast Reactors 287
 - Passive Safety Demonstration 288

PART 2 ADVANCED REACTOR PHYSICS

- 9 Neutron Transport Theory 295
 - 9.1 Neutron Transport Equation 295
 - Boundary Conditions 297
 - Scalar Flux and Current 297
 - Partial Currents 300
 - 9.2 Integral Transport Theory 301
 - Isotropic Point Source 302
 - Isotropic Plane Source 303
 - Anisotropic Plane Source 304
 - Transmission and Absorption Probabilities 305
 - Escape Probability 305
 - First-Collision Source for Diffusion Theory 306
 - Inclusion of Isotropic Scattering and Fission 307
 - Distributed Volumetric Sources in
 - Arbitrary Geometry 308
 - Flux from a Line Isotropic Source of Neutrons 308
 - Bickley Functions 309
 - Probability of Reaching a Distance t from a Line:
 - Isotropic Source Without a Collision 310
 - 9.3 Collision Probability Methods 311
 - Reciprocity Among Transmission and Collision Probabilities 311
 - Collision Probabilities for Slab Geometry 312
 - Collision Probabilities in Two-Dimensional Geometry 312
 - Collision Probabilities for Annular Geometry 314
 - 9.4 Interface Current Methods in Slab Geometry 315
 - Emergent Currents and Reaction Rates Due to Incident Currents 315
 - Emergent Currents and Reaction Rates Due to Internal Sources 318

	Total Reaction Rates and Emergent Currents	320
	Boundary Conditions	321
	Response Matrix	322
9.5	Multidimensional Interface Current Methods	322
	Extension to Multidimension	322
	Evaluation of Transmission and Escape Probabilities	324
	Transmission Probabilities in Two-Dimensional Geometries	325
	Escape Probabilities in Two-Dimensional Geometries	328
	Simple Approximations for the Escape Probability	330
9.6	Spherical Harmonics (P_L) Methods in One-Dimensional Geometries	330
	Legendre Polynomials	331
	Neutron Transport Equation in Slab Geometry	332
	P_L Equations	332
	Boundary and Interface Conditions	333
	P_1 Equations and Diffusion Theory	334
	Simplified P_L or Extended Diffusion Theory	336
	P_L Equations in Spherical and Cylindrical Geometries	337
	Diffusion Equations in One-Dimensional Geometry	340
	Half-Angle Legendre Polynomials	340
	Double- P_L Theory	341
	D- P_0 Equations	343
9.7	Multidimensional Spherical Harmonics (P_L) Transport Theory	343
	Spherical Harmonics	343
	Spherical Harmonics Transport Equations in Cartesian Coordinates	345
	P_1 Equations in Cartesian Geometry	346
	Diffusion Theory	347
9.8	Discrete Ordinates Methods in One-Dimensional Slab Geometry	347
	P_L and D- P_L Ordinates	349
	Spatial Differencing and Iterative Solution	351
	Limitations on Spatial Mesh Size	352
9.9	Discrete Ordinates Methods in One-Dimensional Spherical Geometry	353
	Representation of Angular Derivative	354
	Iterative Solution Procedure	354

	Acceleration of Convergence	356
	Calculation of Criticality	357
9.10	Multidimensional Discrete Ordinates Methods	357
	Ordinates and Quadrature Sets	357
	S_N Method in Two-Dimensional x - y Geometry	360
	Further Discussion	363
9.11	Even-Parity Transport Formulation	364
9.12	Monte Carlo Methods	365
	Probability Distribution Functions	365
	Analog Simulation of Neutron Transport	366
	Statistical Estimation	368
	Variance Reduction	369
	Tallying	372
	Criticality Problems	373
	Source Problems	374
	Random Numbers	375
10	Neutron Slowing Down	379
10.1	Elastic Scattering Transfer Function	379
	Lethargy	379
	Elastic Scattering Kinematics	379
	Elastic Scattering Kernel	380
	Isotropic Scattering in Center-of-Mass System	382
	Linearly Anisotropic Scattering in Center-of-Mass System	383
10.2	P_1 and B_1 Slowing-Down Equations	384
	Derivation	384
	Solution in Finite Uniform Medium	388
	B_1 Equations	388
	Few-Group Constants	390
10.3	Diffusion Theory	391
	Lethargy-Dependent Diffusion Theory	391
	Directional Diffusion Theory	392
	Multigroup Diffusion Theory	392
	Boundary and Interface Conditions	394
10.4	Continuous Slowing-Down Theory	395
	P_1 Equations in Slowing-Down Density Formulation	395
	Slowing-Down Density in Hydrogen	398
	Heavy Mass Scatterers	399

- Age Approximation 399
- Selengut–Goertzel Approximation 400
- Consistent P_1 Approximation 400
- Extended Age Approximation 400
- Grueling–Goertzel Approximation 401
- Summary of P_1 Continuous Slowing-Down Theory 402
- Inclusion of Anisotropic Scattering 403
- Inclusion of Scattering Resonances 404
- P_1 Continuous Slowing-Down Equations 405
- 10.5 Multigroup Discrete Ordinates Transport Theory 406

11 Resonance Absorption

411

- 11.1 Resonance Cross Sections 411
- 11.2 Widely Spaced Single-Level Resonances in a Heterogeneous Fuel–Moderator Lattice 411
 - Neutron Balance in Heterogeneous Fuel Moderator Cell 411
 - Reciprocity Relation 414
 - Narrow Resonance Approximation 415
 - Wide Resonance Approximation 416
 - Evaluation of Resonance Integrals 416
 - Infinite Dilution Resonance Integral 418
 - Equivalence Relations 418
 - Heterogeneous Resonance Escape Probability 419
 - Homogenized Multigroup Resonance Cross Section 420
 - Improved and Intermediate Resonance Approximations 420
- 11.3 Calculation of First-Flight Escape Probabilities 421
 - Escape Probability for an Isolated Fuel Rod 421
 - Closely Packed Lattices 424
- 11.4 Unresolved Resonances 425
 - Multigroup Cross Sections for Isolated Resonances 427
 - Self-Overlap Effects 427
 - Overlap Effects for Different Sequences 430

- 11.5 Multiband Treatment of Spatially Dependent Self-Shielding 431
 - Spatially Dependent Self-Shielding 431
 - Multiband Theory 432
 - Evaluation of Multiband Parameters 434
 - Calculation of Multiband Parameters 436
 - Interface Conditions 437
- 11.6 Resonance Cross-Section Representations 437
 - R-Matrix Representation 437
 - Practical Formulations 439
 - Generalization of the Pole Representation 443
 - Doppler Broadening of the Generalized Pole Representation 446

12 Neutron Thermalization

451

- 12.1 Double Differential Scattering Cross Section for Thermal Neutrons 451
- 12.2 Neutron Scattering from a Monatomic Maxwellian Gas 452
 - Differential Scattering Cross Section 452
 - Cold Target Limit 453
 - Free-Hydrogen (Proton) Gas Model 453
 - Radkowsky Model for Scattering from H_2O 453
 - Heavy Gas Model 454
- 12.3 Thermal Neutron Scattering from Bound Nuclei 455
 - Pair Distribution Functions and Scattering Functions 455
 - Intermediate Scattering Functions 456
 - Incoherent Approximation 456
 - Gaussian Representation of Scattering 457
 - Measurement of the Scattering Function 458
 - Applications to Neutron Moderating Media 458
- 12.4 Calculation of the Thermal Neutron Spectra in Homogeneous Media 459
 - Wigner-Wilkins Proton Gas Model 460
 - Heavy Gas Model 465
 - Numerical Solution 467
 - Moments Expansion Solution 468
 - Multigroup Calculation 472
 - Applications to Moderators 472

- 12.5 Calculation of Thermal Neutron Energy Spectra in Heterogeneous Lattices 473
- 12.6 Pulsed Neutron Thermalization 475
 - Spatial Eigenfunction Expansion 475
 - Energy Eigenfunctions of the Scattering Operator 476
 - Expansion in Energy Eigenfunctions of the Scattering Operator 478

13 Perturbation and Variational Methods

481

- 13.1 Perturbation Theory Reactivity Estimate 481
 - Multigroup Diffusion Perturbation Theory 481
- 13.2 Adjoint Operators and Importance Function 484
 - Adjoint Operators 484
 - Importance Interpretation of Adjoint Function 485
 - Eigenvalues of the Adjoint Equation 487
- 13.3 Variational/Generalized Perturbation Reactivity Estimate 487
 - One-Speed Diffusion Theory 487
 - Other Transport Models 491
 - Reactivity Worths of Localized Perturbations in a Large PWR Core Model 491
 - Higher-Order Variational Estimates 492
- 13.4 Variational/Generalized Perturbation Theory Estimates of Reaction Rate Ratios in Critical Reactors 493
- 13.5 Variational/Generalized Perturbation Theory Estimates of Reaction Rates 495
- 13.6 Variational Theory 496
 - Stationarity 496
 - Roussopolos Variational Functional 496
 - Schwinger Variational Functional 497
 - Rayleigh Quotient 497
 - Construction of Variational Functionals 498
- 13.7 Variational Estimate of Intermediate Resonance Integral 498
- 13.8 Heterogeneity Reactivity Effects 500
- 13.9 Variational Derivation of Approximate Equations 501
 - Inclusion of Interface and Boundary Terms 502

13.10	Variational Even-Parity Transport Approximations	503	
	Variational Principle for the Even-Parity Transport Equation	503	
	Ritz Procedure	504	
	Diffusion Approximation	505	
	One-Dimensional Slab Transport Equation	506	
13.11	Boundary Perturbation Theory	506	
14	Homogenization		513
14.1	Equivalent Homogenized Cross Sections	514	
14.2	ABH Collision Probability Method	515	
14.3	Blackness Theory	519	
14.4	Fuel Assembly Transport Calculations	521	
	Pin Cells	521	
	Wigner-Seitz Approximation	522	
	Collision Probability Pin-Cell Model	522	
	Interface Current Formulation	526	
	Multigroup Pin-Cell Collision Probabilities Model	527	
	Resonance Cross Sections	527	
	Full Assembly Transport Calculation	528	
14.5	Homogenization Theory	528	
	Homogenization Considerations	528	
	Conventional Homogenization Theory	530	
14.6	Equivalence Homogenization Theory	530	
14.7	Multiscale Expansion Homogenization Theory	534	
14.8	Flux Detail Reconstruction	537	
15	Nodal and Synthesis Methods		541
15.1	General Nodal Formalism	542	
15.2	Conventional Nodal Methods	545	
15.3	Transverse Integrated Nodal Diffusion Theory Methods	547	
	Transverse Integrated Equations	548	
	Polynomial Expansion Methods	549	
	Analytical Methods	554	
	Heterogeneous Flux Reconstruction	554	

15.4 Transverse Integrated Nodal Integral Transport Theory Models 555
 Transverse Integrated Integral Transport Equations 555
 Polynomial Expansion of Scalar Flux 558
 Isotropic Component of Transverse Leakage 558
 Double- P_n Expansion of Surface Fluxes 559
 Angular Moments of Outgoing Surface Fluxes 560
 Nodal Transport Equations 561

15.5 Transverse Integrated Nodal Discrete Ordinates Method 562

15.6 Finite Element Coarse Mesh Methods 563
 Variational Functional for the P_1 Equations 564
 One-Dimensional Finite-Difference Approximation 565
 Diffusion Theory Variational Functional 567
 Linear Finite-Element Diffusion Approximation in One Dimension 568
 Higher-Order Cubic Hermite Coarse-Mesh Diffusion Approximation 569
 Multidimensional Finite-Element Coarse-Mesh Methods 571

15.7 Variational Discrete Ordinates Nodal Method 572
 Variational Principle 572
 Application of the Method 581

15.8 Variational Principle for Multigroup Diffusion Theory 581

15.9 Single-Channel Spatial Synthesis 585

15.10 Multichannel Spatial Synthesis 590

15.11 Spectral Synthesis 592

16 Space-Time Neutron Kinetics

16.1 Flux Tilts and Delayed Neutron Holdback 599
 Modal Eigenfunction Expansion 600
 Flux Tilts 601
 Delayed Neutron Holdback 602

16.2 Spatially Dependent Point Kinetics 602
 Derivation of Point Kinetics Equations 604
 Adiabatic and Quasistatic Methods 605

- Variational Principle for Static Reactivity 606
- Variational Principle for Dynamic Reactivity 607
- 16.3 Time Integration of the Spatial Neutron Flux Distribution 610
 - Explicit Integration: Forward-Difference Method 610
 - Implicit Integration: Backward-Difference Method 611
 - Implicit Integration: θ Method 613
 - Implicit Integration: Time-Integrated Method 615
 - Implicit Integration: GAKIN Method 617
 - Alternating Direction Implicit Method 620
 - Stiffness Confinement Method 622
 - Symmetric Successive Overrelaxation Method 623
 - Generalized Runge-Kutta Methods 624
- 16.4 Stability 625
 - Classical Linear Stability Analysis 626
 - Lyapunov's Method 628
 - Lyapunov's Method for Distributed Parameter Systems 630
- 16.5 Control 631
 - Variational Methods of Control Theory 632
 - Dynamic Programming 634
 - Pontryagin's Maximum Principle 635
 - Variational Methods for Spatially Dependent Control Problems 637
 - Dynamic Programming for Spatially Continuous Systems 639
 - Pontryagin's Maximum Principle for a Spatially Continuous System 640
- 16.6 Xenon Spatial Oscillations 642
 - Linear Stability Analysis 643
 - μ -Mode Approximation 645
 - λ -Mode Approximation 647
 - Nonlinear Stability Criterion 650
 - Control of Xenon Spatial Power Oscillations 652
 - Variational Control Theory of Xenon Spatial Oscillations 652
- 16.7 Stochastic Kinetics 654
 - Forward Stochastic Model 655
 - Means, Variances, and Covariances 658
 - Correlation Functions 660

Physical Interpretation, Applications, and Initial Boundary Conditions	661
Numerical Studies	663
Startup Analysis	665

APPENDICES

A	Some Useful Nuclear Data	671
B	Some Useful Mathematical Formulas	677
C	Step Functions, Delta Functions, and Other Exotic Beasts	679
D	Some Properties of Special Functions	683
E	Introduction to Matrices and Matrix Algebra	689
F	Introduction to Laplace Transforms	693
