

CONTENTS

CHAPTER 1: INTRODUCTION	1
1.1. Flue gas treatment	5
1.2. Wastewater treatment	6
1.3. Sewage treatment	6
CHAPTER 2: RADIATION PROCESSING OF GASEOUS SYSTEMS	8
2.1. Radiation treatment of sulphur dioxide and nitrogen oxides .	10
2.1.1. Industrial plant construction	14
2.1.2. Economics of the process.....	20
2.2. Radiation induced removal of VOCs from exhaust gases	20
CHAPTER 3: RADIATION PROCESSING OF WASTEWATER	25
3.1. Water radiolysis	25
3.2. Main pathways of pollutant degradation	29
3.2.1. Chain oxidation	29
3.2.2. Formation of insoluble compounds	30
3.2.3. Coagulation of colloids	30
3.2.4. Enhancement of pollutant biodegradability	31
3.3. Radiation processing of industrial wastewater	31
3.4. Reclamation of effluent from municipal wastewater treatment plants	35
3.5. Radiation induced removal of heavy metal ions from wastewater	37
3.6. Economics of wastewater treatment	38
3.6.1. Combinations with conventional methods	39
3.6.2. Technological regimes	40
3.7. Future prospects	42
CHAPTER 4: RADIATION PROCESSING OF SEWAGE SLUDGE	45
4.1. Treatment of sewage sludge using ionizing radiation	46
4.2. Pilot and industrial scale operation	47
4.3. Economics of sludge treatment	51
4.4. Enhanced composting of radiation disinfected sewage sludge	53
4.5. Soil remediation	53

CHAPTER 5: RADIATION SOURCES FOR ENVIRONMENTAL

APPLICATION	57
5.1. Radioisotope sources	57
5.1.1. Cobalt-60 sources	58
5.1.2. Caesium-137 sources	58
5.2. Electron accelerators	59
5.2.1. Electron accelerators for industrial uses	59
5.2.2. Transformer accelerators	60
5.2.3. Ultra-high frequency accelerators	62
5.2.4. Linear accelerators	62
5.2.5. Accelerators required for environmental applications	63
5.2.6. Accelerators for flue gas treatment	65
5.2.7. Accelerators for wastewater treatment	67
5.2.8. Accelerators for sewage sludge treatment	69
