CONTENTS

Preface xxi

Preface to the First Edition xxv

Introduction 1

Importance of Combustion in Various Applications / 1
Related Constituent Disciplines for Combustion Studies / 3
General Method of Approach to Combustion Problems / 4
General Objectives of Combustion Modeling / 4
Classification of Combustion Problems / 4
General Structure of a Theoretical Model / 6
Governing Equations for Combustion Modeling (Conservation and Transport Equations) / 6
Some Common Assumptions Made in Combustion Models (Especially for Classical Models) / 6
Several Basic Definitions / 8

1 Review of Chemical Thermodynamics 11

Nomenclature / 11
1 Brief Statement of Thermodynamic Laws / 15
2 Equation of State / 17
3 Conservation of Mass / 18
4 The First Law of Thermodynamics; Conservation of Energy / 20
5 The Second Law of Thermodynamics / 24
5.1 Equilibrium Thermodynamics / 24
5.2 Nonequilibrium Thermodynamics / 26
6 Criteria for Equilibrium / 34
7 Conservation of Atomic Species / 36

8 Various Methods for Reactant-Fraction Specification / 38
8.1 Mole Fraction X and Mass Fraction Y / 38
8.2 Fuel–Oxidant Ratio F/O and Fuel–Air Ratio F/A / 39
8.3 Equivalence Ratio ϕ / 39
8.4 Mixture Fraction f / 40
9 Standard Enthalpies of Formation / 43
10 Thermochemical Laws / 47
11 Relationship Between Bond Energies and Heats of Formation / 48
12 Heats of Reaction for Constant-Pressure and Constant-Volume Combustion / 52
12.1 Constant-Pressure Combustion / 53
12.2 Constant-Volume Combustion / 66
13 Energy Balance Considerations for Flame Temperature Calculations / 68
14 Equilibrium Constants / 73
15 Real-Gas Equations of State and Fugacity Calculation / 90
16 More-Complicated Dissociation in the Combustion of Hydrocarbons / 93
17 The Clausius–Clapeyron Equation for Phase Equilibrium / 96
18 Calculation of Equilibrium Compositions with NASA's CEA Computer Program / 98
18.1 Assumptions and Capabilities / 101
18.2 Equations Describing Chemical Equilibrium / 103
18.2.1 Thermodynamic Equations / 103
18.2.2 Minimization of Gibbs Free Energy / 104
19 Other Well-Established Chemical Equilibrium Codes / 107
References / 109
Homework / 110
Projects / 114

Chemical Kinetics and Reaction Mechanisms **116**

Nomenclature / 116
1 Rates of Reaction and Their Functional Dependence / 118
1.1 Total Collision Frequency / 119
1.2 Equation of Arrhenius / 122
1.3 Apparent Activation Energy / 125
1.4 Rates of Reaction / 126
1.5 Methods for Measurement of Gas-Phase Reaction Rates / 131
1.5.1 Static Methods / 132
1.5.1.1 Flash Photolysis Resonance Fluorescence Technique / 133
1.5.1.2 Relative Rate-Constant Photolysis Technique / 134

1.5.1.3 Laser Photolysis/Laser Induced Fluorescence Technique / 135
1.5.2 Dynamic Methods for Reactions in Flow Systems / 136
1.5.3 Several Methods for Measuring Rapid Reaction Rates / 137
2 One-Step Chemical Reactions of Various Orders / 141
2.1 First-Order Reactions / 141
2.2 Second-Order Reactions / 144
2.3 Third-Order Reactions / 147
3 Consecutive Reactions / 148
4 Competitive Reactions / 150
5 Opposing Reactions / 150
5.1 First-Order Reaction Opposed by a First-Order Reaction / 151
5.2 First-Order Reaction Opposed by a Second-Order Reaction / 153
5.3 Second-Order Reaction Opposed by a Second-Order Reaction / 153
6 Chain Reactions / 154
6.1 Free Radicals / 154
6.2 Lindemann's Theory for First-Order Reaction / 156
6.3 Complex Reactions / 159
6.3.1 Hydrogen–Bromine Reaction / 159
7 Chain-Branching Explosions / 162
8 Chemkin Analysis and Code Application for Gas-Phase Kinetics / 164
8.1 Thermodynamic Properties / 165
8.2 Reaction Rate Expressions / 166
8.3 Brief Description of Procedures in Using Chemkin Code / 169
9 Surface Reactions / 173
9.1 Surface Adsorption Processes / 174
9.1.1 The Langmuir Adsorption Isotherm / 176
9.1.2 Adsorption with Dissociation / 177
9.1.3 Competitive Adsorption / 178
9.2 Surface Reaction Processes / 178
9.2.1 Reaction Mechanism / 178
9.2.2 Unimolecular Surface Reactions / 180
9.2.3 Bimolecular Surface Reactions / 181
9.2.4 Desorption / 182
9.3 Kinetic Model of Hydrogen–Oxygen Reaction on Platinum Surface / 183
9.3.1 Simple Kinetic Model of H_2/O_2 Reaction on Platinum Surface / 184

9.3.2 Kinetic Rates of H_2/O_2 Reaction on Platinum Surface / 186
9.4 Experimental Methods to Study Surface Reactions / 187
9.4.1 Spectroscopic Methods / 187
9.4.1.1 Auger Electron Spectroscopy / 187
9.4.2 Temperature-Controlled Methods / 189
9.4.3 Combination of Spectroscopic and Temperature-Controlled Methods / 190
9.5 Surface Reaction Rate Determination / 190
9.5.1 An Example of Application of LIF Technique in Surface Reaction Rate Determination / 191
9.5.1.1 The Elementary Steps / 192
9.5.1.2 Experimental Setup / 193
9.5.1.3 Experimental Results / 193
10 Rate Laws for Isothermal Reactions Utilizing Dimensionless Parameters / 195
10.1 Equilibrium Constants / 197
10.2 Net Rate of Production of Chemical Species / 199
11 Procedure and Applications of Sensitivity Analysis / 199
11.1 Introduction to Sensitivity Analysis / 200
11.2 The Procedure for Local Sensitivity Analysis / 205
11.2.1 Time-Dependent Zero-Dimensional Problems / 205
11.2.2 The Procedure for Steady-State One-Dimensional Problems / 208
11.2.3 The Procedure for Time-Dependent Spatial Problems / 209
11.3 The Example of Sensitivity Analysis of Aliphatic Hydrocarbon Combustion / 210
11.3.1 Local Sensitivity Analysis in One-Dimensional Flame Fronts / 210
11.3.2 Sensitivity Analysis for Zero-Dimensional Problems / 210
12 Reaction Flow Analysis / 211
13 Reaction Mechanisms of H_2/O_2 Systems / 215
13.1 Background Information about H_2/O_2 Reaction Systems / 216
13.2 Explosion Limits of H_2/O_2 Systems / 220
14 Gas-Phase Reaction Mechanisms of Aliphatic Hydrocarbon and Oxygen System / 223
14.1 Specific Mechanisms / 224
14.1.1 Gas-Phase Kinetics of H_2 Oxidation / 225
14.1.2 O_3 Decomposition Mechanism / 232
14.1.3 CO Oxidation Mechanism / 233
14.1.4 CH_2O Reaction / 233

14.1.5 CH_4 Oxidation / 234
14.1.6 C_2H_6 (Ethane) Oxidation / 236
14.1.7 C_2H_4 (Ethylene) Oxidation / 237
14.1.8 C_2H_2 (Acetylene) Oxidation / 238
14.1.9 CH_2CO (Ketene) Oxidation / 240
14.1.10 CH_3OH (Methanol) Reactions / 241
14.1.11 C_2H_5OH (Ethanol) Reactions / 242
14.1.12 CH_3CHO (Acetaldehyde) Reaction / 243
14.2 Discussion of More Complex Cases / 244
Reduction of Highly Complex Reaction System to Simpler Reaction Mechanisms / 245
15.1 Quasi-Steady-State Assumption (QSSA) and Partial Equilibrium Assumption / 246
15.2 Computational Singular Perturbation Methods for Stiff Equations / 247
15.2.1 Stiff Equations / 248
15.2.2 Chemical Kinetic Systems as Stiff Equations / 248
15.2.3 Formulation of the Problem / 249
15.2.3.1 The Fast Subspace / 249
15.2.3.2 The Equations for f^I / 250
15.2.3.3 Determination of m, the Choice of $\mathbf{a}_I$ and $\mathbf{b}^J$ / 251
15.2.4 Procedures for Solving the Chain Reaction Problems / 252
15.3 Some Observations of the CSP Method / 252
Formation Mechanism of Nitrogen Oxides / 255
16.1 Thermal NO Mechanism (Zel'dovich Mechanism) / 255
16.2 Prompt NO Mechanism (Fenimore Mechanism) / 258
16.3 NO Production from Fuel-Bound Nitrogen / 262
16.3.1 The Oxidation of HCN / 262
16.3.2 The NO $\rightarrow$ HCN $\rightarrow$ N_2 Mechanism / 264
16.3.3 The Oxidation of NH_3 / 265
16.4 NO_2 Mechanism / 267
16.5 N_2O Mechanism / 267
16.6 Overall Remarks on NO_x Formation / 269
Formation and Control of CO and Particulates / 270
17.1 Carbon Monoxide / 270
17.2 Particulate Matter / 271
17.2.1 Major Types of Particulates / 272
17.2.2 Harmful Effects / 272
17.2.3 Particulate Matter Control Methods / 272
References / 274
Homework / 281

The Conservation Equations for Multicomponent Reacting Systems 285

Nomenclature / 285
1 Definitions of Concentrations, Velocities, and Mass Fluxes / 287
2 Fick's Law of Diffusion / 289
3 Theory of Ordinary Diffusion in Gases at Low Density / 290
4 Continuity Equation and Species Mass Conservation Equations / 293
5 Conservation of Momentum / 297
5.1 Momentum Equation in Terms of Stress / 297
5.1.1 Momentum Equation Derivation by Infinitesimal Particle Approach / 298
5.1.2 Momentum Equation Derivation by Infinitesimal Control Volume Approach / 302
5.1.3 Finite Control Volume / 303
5.2 Stress–Strain Rate Relationship (Constitutive Relationship) / 304
5.2.1 Strain Rate / 305
5.2.2 Stress Tensor / 307
5.3 Navier–Stokes Equations / 310
6 Conservation of Energy / 320
7 Physical Derivation of the Multicomponent Diffusion Equation / 328
8 Other Necessary Equations in Multicomponent Systems / 331
9 Solution of a Multicomponent-Species System / 331
10 Shvab–Zel'dovich Formulation / 332
11 Dimensionless Ratios of Transport Coefficients / 336
12 Boundary Conditions at an Interface / 337
References / 350
Homework / 350
Projects / 353

4 Detonation and Deflagration Waves of Premixed Gases 354

Nomenclature / 354
1 Qualitative Differences Between Detonation and Deflagration / 356
2 The Hugoniot Curve / 357
3 Properties of the Hugoniot Curve / 361
3.1 Entropy Distribution along the Hugoniot Curve / 365

3.2 Comparison of the Burned-Gas Velocity Behind a Detonation Wave with the Local Speed of Sound / 367
4 Determination of Chapman–Jouguet Detonation Wave Velocity / 373
4.1 Trial-and-Error Method / 373
4.2 The Newton–Raphson Iteration Method / 375
4.3 Comparison of Calculated Detonation-Wave Velocities with Experimental Data / 379
5 Detonation-Wave Structure / 381
5.1 Zel'dovich–von Neumann–Döring (ZND) One-Dimensional Wave Structure / 381
5.2 Multidimensional Detonation-Wave Structure / 384
5.3 Numerical Simulation of Detonations / 386
6 The Mechanism of Deflagration-to-Detonation Transition (DDT) in Gaseous Mixtures / 388
7 Detonability and Chemical Kinetics: Limits of Detonability / 395
7.1 Classical Model of Belles / 395
7.2 Detonability Limits of Confined Fuel Mixtures / 401
7.2.1 Initial Condition Dependence / 402
7.2.2 Boundary Condition Dependence / 402
7.2.3 Single-Head Spin Detonation / 403
7.3 Detonability Criteria and Detonation Cell Size / 405
7.4 Chemical Kinetics of Detonation in H_2–Air–Diluent Mixtures / 410
8 Nonideal Detonations / 413
8.1 Definition of Nonideal Detonation and Zel'dovich and Shchelkin's Detonation Mechanisms in Rough Tubes / 414
8.2 Theoretical Considerations of Energy and Momentum Losses / 415
8.3 Critical Pipe Diameter Consideration / 416
8.4 Effect of Several Physical and Chemical Parameters on Detonability / 419
8.5 Possible Measures for Reducing Potential of Detonation Wave Generation / 420
9 Consideration of Spontaneous Detonation Initiation / 422
9.1 Functional Form of Distribution of Ignition Delay / 424
9.2 Experimental Verification of Processes of Nonexplosive Detonation Initiation / 425
9.2.1 Photochemical Initiation of Detonation in Mixtures with Nonuniform Concentration / 425
9.2.2 Gasdynamic Jet as a Method of Creating Temperature-Concentration Nonuniformity / 426
9.3 General Observation and Status of Understanding / 428

References / 428
Homework / 434
Project / 435

Premixed Laminar Flames 437

Nomenclature / 437
1 Introduction and Flame Speed Measurement Methods / 438
1.1 Bunsen Burner Method / 438
1.2 Constant-Volume Spherical Bomb Method / 442
1.3 Soap-Bubble (Constant-Pressure Bomb) Method / 443
1.4 Particle-Track Method / 445
1.5 Flat-Flame Burner Method / 445
1.6 Diagnostic Method for Flame Structure Measurements / 447
1.6.1 Velocity Measurements / 448
1.6.2 Density Measurements / 448
1.6.3 Concentration Measurements / 448
1.6.4 Temperature Measurements / 448
2 Classical Laminar-Flame Theories / 449
2.1 Thermal Theory: Mallard and LeChatelier's Development (1883) / 449
2.2 Comprehensive Theory: The Theory of Zel'dovich, Frank-Kamenetsky, and Semenov / 451
2.3 Diffusion Theory: The Theory of Tanford and Pease / 458
3 Contemporary Method for Solving Laminar-Flame Problems / 461
3.1 Premixed O_3/O_2 Laminar Flames / 461
3.2 Chemkin Code for Solving Premixed Laminar-Flame Structures / 468
4 Dynamic Analysis of Stretched Laminar Premix Flames / 471
4.1 Definition of Flame Stretch Factor and Karlovitz Number / 471
4.2 Balance Equation for Premixed Laminar-Flame Area / 476
4.3 The Use of Expanding Spherical Flames to Determine Burning Velocities and Stretch Effects in Hydrogen/Air Mixtures / 477
4.4 Laminar Burning Velocities and Markstein Numbers of Hydrocarbon/Air Flames / 484
4.5 Burning Rates of Ultra-Lean to Moderately Rich $H_2/O_2/N_2$ Laminar Flames with Pressure Variations / 490
5 Effect of Chemical and Physical Variables on Flame Speed / 496
5.1 Chemical Variables / 496
5.1.1 Effect of Mixture Ratio / 496
5.1.2 Effect of Fuel Molecular Structure / 497
5.1.3 Effects of Additives / 499
5.2 Physical Variables / 500
5.2.1 Effect of Pressure / 500

5.2.2 Effect of Initial Temperature / 501
5.2.3 Effect of Flame Temperature / 502
5.2.4 Effect of Thermal Diffusivity and Specific Heat / 502
6 Principle of Stabilization of Combustion Waves in Laminar Streams / 503
7 Flame Quenching / 507
8 Flammability Limits of Premixed Laminar Flames / 510
8.1 Flammability Limits Determined from a Standard Glass Tube / 510
8.2 Effect of Pressure and Temperature on Flammability Limits / 512
8.3 Spalding's Theory of Flammability Limits and Flame Quenching / 513
8.4 Flame Structure near the Flammability Limits of Premixed Hydrogen–Oxygen Flames / 523
References / 528
Homework / 533
Project / 535

6 Gaseous Diffusion Flames and Combustion of a Single Liquid Fuel Droplet 537

Nomenclature / 537
1 Burke and Schumann's Theory of Laminar Diffusion Flames / 539
1.1 Basic Assumptions and Solution Method / 544
1.2 Flame Shape and Flame Height / 546
2 Phenomenological Analysis of Fuel Jets / 548
3 Laminar Diffusion Flame Jets / 551
3.1 Laminar Jet Mixing / 551
3.2 Laminar Jet with Chemical Reactions / 557
3.3 Numerical Solution of Two-Dimensional Axisymmetric Laminar Diffusion Flames / 561
3.4 Effect of Preferential Diffusion of Species and Heat in Laminar Diffusion Flames / 566
4 Evaporation and Burning of a Single Droplet in a Quiescent Atmosphere / 569
4.1 Evaporation of a Single Fuel Droplet / 572
4.2 Mass Burning Rate of a Single Fuel Droplet / 578
5 Fuel Droplet in a Convective Stream / 581
5.1 Correlation Development for Nearly Spherical Droplets in Convective Streams / 581
5.2 Simulation of Deformed Droplet Dynamics / 583
5.3 Effect of Internal Circulation on Droplet Vaporization Rate / 585

6 Supercritical Burning of Liquid Droplets
in a Stagnant Environment / 590
6.1 Thermodynamic and Transport Properties / 593
6.1.1 Extended Corresponding-State Principle / 594
6.1.2 Equation of State / 595
6.1.3 Thermodynamic Properties / 596
6.1.4 Transport Properties / 597
6.2 Vapor–Liquid Phase Equilibrium / 598
6.3 Droplet Vaporization in Quiescent Environments / 603
6.4 Droplet Combustion in Quiescent Environments / 606
6.5 Droplet Vaporization in Supercritical Convective
Environments / 610
6.6 Droplet Response to Ambient Flow Oscillation / 613
References / 614
Homework / 618
Projects / 620

pendix A Evaluation of Thermal and Transport Properties of Gases and Liquids **623**

Nomenclature / 623
Introduction / 625
1 Gas Density / 625
1.1 Baseline Method / 627
Ideal-Gas Equation of State / 627
1.2 High-Pressure Correction / 628
Van der Waals Equation of State / 628
Redlich–Kwong Equation of State / 628
Soave (SRK) and Peng–Robinson Equations of
State / 628
Virial Equation of State / 629
Beattie–Bridgeman Equation of State / 630
Benedict–Webb–Rubin (BWR) Equation of
State / 630
1.3 Mixing Rules / 631
Ideal-Gas Mixing Rules / 631
Mixing Rules for Redlich–Kwong Type of Equation
of State / 631
Benedict–Webb–Rubin Mixing Rules / 632
Virial Equation Mixing Parameters / 632
2 Liquid Density / 633
2.1 Baseline Method / 633
Spencer–Danner Correlation and Other
Modifications / 633
COSTALD (Hankinson–Thomson Correlation) / 634

2.2 High-Pressure Correction / 635
Hankinson–Brobst–Thomson (HBT) Model / 635
Generalized COSTALD / 636
Chang–Zhao Equation / 636
Model of Aalto et al. / 637
2.3 Mixing Rules / 638
Mixing Rules for Critical Temperature of Liquid Mixtures / 638
Mixing Rules for Critical Volume $V_{c,m}$ and Characteristic Volume V_m^* / 639
Mixing Rule for Acentric Factor / 639
Estimation of the Critical Pressure for a Mixture / 640
3 Gas Specific Heat / 641
3.1 Baseline Method / 641
Evaluation of Ideal-Gas Heat Capacity at Constant Pressure, J/(mol · K) / 642
Joback Method[1] / 642
Method of Thinh et al. [26] / 644
3.2 High-Pressure Correction / 645
3.3 Mixing Rules / 650
4 Liquid Specific Heat / 651
4.1 Baseline Method / 651
Group Contribution Method / 651
Corresponding States Method / 654
4.2 High-Pressure Correction / 654
4.3 Mixing Rule for Liquid Mixtures / 654
5 Gas Viscosity / 654
5.1 Baseline Method / 655
Chapman–Enskog Approach / 655
Method of Corresponding States / 657
5.2 High-Pressure Correction / 658
Reichenberg Method / 658
Lucas Method / 659
5.3 Mixing Rules / 660
6 Liquid Viscosity / 661
6.1 Baseline Method / 661
Correlating Equations / 662
Low-Temperature Viscosity Estimation Methods / 664
Van Velzen, Cardozo, and Langenkamp's Group Contribution Method[62] / 665
Orrick and Erbar's Group Contribution Method[1] / 665

Przezdziecki and Sridhar's Corresponding States Method[63] / 666
High-Temperature Liquid Viscosity Estimation Methods / 667
Letsou and Stiel's Method for Saturated Liquids[67] / 667
Brule and Starling's[68] and Chung et al.'s[69] Method / 667
6.2 High-Pressure Correction / 668
Lucas's Estimation Method[48] / 668
6.3 Mixing Rules / 669
Grunberg and Nissan's Method[71] / 669
Teja and Rice's Method[74] / 670
7 Gas Thermal Conductivity / 671
7.1 Baseline Method / 671
7.2 High-Pressure Correction / 672
7.3 Mixing Rules / 673
Gas Mixture at Low to Moderate Pressures / 673
Gas Mixture at High Pressures / 673
8 Liquid Thermal Conductivity / 674
8.1 Baseline Method / 674
Miller et al.'s Empirical Correlation[86] / 674
Baroncini et al.'s Method / 675
8.2 High-Pressure Correction / 677
8.3 Mixing Rules / 677
9 Gas Diffusivity / 678
9.1 Baseline Method / 678
Chapman and Enskog's Method[43] / 678
Wilke and Lee's Method[91] / 680
9.2 High-Pressure Correction / 680
9.3 Mixing Rules / 683
10 Liquid Diffusivity / 684
10.1 Baseline Method / 684
Wilke–Chang Correlation[94] / 684
Tyn and Calus's Method[95] / 685
Hayduk and Minhas's Method[96] / 686
Tyn's Method for Higher Temperatures[97] / 686
10.2 High-Pressure Correction / 687
10.3 Mixing Rules / 687
Perkins and Geankoplis's Method[99] / 687
References / 688

Appendix B Constants and Conversion Factors Often Used in Combustion 693

Appendix C Naming of Hydrocarbons and Properties of Hydrocarbon Fuels 697

Appendix D Melting, Boiling, and Critical Temperatures of Elements 705

Appendix E Periodic Table and Electronic Configurations of Neutral Atoms in Ground States 707
