Preface to the Second Edition	ix
Preface to the First Edition	x
Acknowledgements	xii
1 Introduction to Concepts	1
1.1 Thermal Efficiency	2
1.2 Propulsive Efficiency	3
1.3 Specific Impulse and Range	5
1.4 Ramjets	6
1.5 Turbojets	9
1.6 Turbofans	11
1.7 Turboprops and Other Shaft Engines: Regeneration	11
1.8 Stationary Gas Turbines: Topping	14
1.9 Energy Exchange, Mach Number, and Reynolds Number	15
1.10 Stresses	17
1.11 Noise	18
1.12 Thrust and Drag	18
1.13 Fuels and Propellants	21
1.14 Some Engines in Cutaway	27
Problems	27
2 Ideal Cycle Analysis: Trends	29
2.1 Stagnation Temperature and Pressure	30
2.2 The Ramjet	32
2.3 The Turbojet	36
2.4 The Afterburning Turbojet	43
2.5 The Turbofan	47
2.6 The Afterburning Turbofan	50
2.7 The Turboprop	54
2.8 Thrust Lapse	59
2.9 Cooling Cycles	60
2.10 The Regenerative Gas Turbine	62
2.11 Gas Turbines for Topping	66
2.12 The Importance of Turbine Inlet Temperature	67
Problems	70

3	Cycle Analysis with Losses	73
3.1	Variation in Gas Properties	73
3.2	Diffuser Pressure Recovery	74
3.3	Compressor and Turbine Efficiencies	75
3.4	Burner Efficiency and Pressure Loss	78
3.5	Imperfect Expansion Loss	79
3.6	Heat Exchanger Effectiveness and Pressure Loss	80
3.7	Turbojet with Losses	81
3.8	Turbofan with Losses	88
3.9	Regenerated Gas Turbine with Losses	94
3.10	Combined Gas Turbine-Steam Cycles with Losses	99
3.11	Concluding Comments	102
	Problems	103
4	Nonrotating Components	105
4.1	Topics in Gas Dynamics	105
4.2	Diffusers	120
4.3	Exhaust Nozzles	139
4.4	Combustors and Afterburners	154
	References	180
	Problems	181
5	Compressors and Fans	185
5.1	Energy Exchange, Rotor to Fluid	187
5.2	Compressor Geometry and the Flow Pattern	197
5.3	Design Choices Based on Blade Section Performance	238
5.4	Details of Flow in Transonic Compressors	245
5.5	Stage Performance: Corrected Parameters	249
5.6	Multi-Stage Compressors	250
5.7	Compressor and Compression System Stability	254
5.8	Centrifugal Compressors	266
5.9	Supersonic-Throughflow Fan	273
	References	278
	Problems	280

6	Turbines	283
6.1	Turbine Stage Characteristics	285
6.2	Turbine Blading	290
6.3	Turbine Cooling	296
6.4	Turbine Design Systems	310
6.5	Turbine Similarity	311
	References	313
	Problems	313
7	Engine Structures	315
7.1	Centrifugal Stresses	315
7.2	Gas Bending Loads on Blades	320
7.3	Thermal Stresses	324
7.4	Critical Speeds and Vibration	326
7.5	Blade Flutter	333
7.6	Bearings	338
7.7	Engine Arrangement and Static Structure	341
	References	345
	Problems	345
8	Component Matching and Engine Performance	347
8.1	Compressor-Turbine Matching: The Gas Generator	347
8.2	Matching the Gas Generator and the Nozzle	349
8.3	Multi-Spool Matching	350
8.4	Engine-Inlet Matching and Distortion	351
8.5	Overall Performance	353
8.6	Control and Acceleration	357
	References	363
	Problems	364
9	Aircraft Engine Noise	365
9.1	Noise Sources: Unsteady Flow	369
9.2	Jet Noise	377
9.3	Turbomachinery Noise	386

9.4	Noise Measurement and Rules	395
	References	399
	Problems	400
10	Hypersonic Engines	401
10.1	Hypersonic Inlets	404
10.2	Heat Addition in High-Speed Flow	406
10.3	Heat Release Due to Chemical Reactions	409
10.4	Nozzle Flow	414
10.5	Fuel Injection and Mixing	415
10.6	Quantitative Discussion of Scramjet Performance	417
10.7	Cooling the Scramjet	429
10.8	The Air Turborocket	443
10.9	The Liquid-Air Collection Engine	448
	References	451
	Problems	452
11	Propulsion Systems Analysis	453
11.1	Takeoff	454
11.2	Climb and Acceleration	456
11.3	Cruise	464
11.4	Maneuvering	466
	References	467
	Problems	467
	Index	469
