**Preface** xiii

**Acknowledgements** xv

## **Chapter 1**

### **Introduction** 1

- 1-1 Objectives 1
- 1-2 A short history of nuclear safety technology 2
  - 1-2-1 The early years 2
  - 1-2-2 From the late 1950s to the Three Mile Island accident 2
  - 1-2-3 From the Three Mile Island accident to the Chernobyl accident 7
  - 1-2-4 The Chernobyl accident and after 8
- References 10
- Chapter notes 10

## **Chapter 2**

### **Inventory and localization of radioactive products in the plant** 13

References 15

## **Chapter 3**

### **Safety systems and their functions** 17

- 3-1 Plant systems 17
- 3-2 Safety systems and accidents 18

- 3-3 Future safety systems and plant concepts 23
  - 3-3-1 General remarks 23
  - 3-3-2 Some passive safety systems for nuclear plants 27
  - 3-3-3 Inherently safe systems in the process industries 30

References 32

Chapter notes 32

## **Chapter 4**

### **The classification of accidents and a discussion of some examples** 35

- 4-1 Classification 35
- 4-2 Design basis accidents 35
  - 4-2-1 Some important data for accident analysis 35
  - 4-2-2 Example of a category 2 accident: spurious opening of a pressurizer safety valve 40
  - 4-2-3 Example of a category 3 accident: instantaneous power loss to all the primary pumps 41
  - 4-2-4 Example of a category 4 accident: main steam line break 43
  - 4-2-5 Example of a category 4 accident: sudden expulsion of a control rod from the core 44
  - 4-2-6 Example of a category 4 accident: break of the largest pipe of the primary system (large LOCA) 46
  - 4-2-7 Example of a category 4 accident: fuel handling accident 47
  - 4-2-8 Area accidents 50

- 4-3 Beyond design basis accidents 51
  - 4-3-1 Plant originated accidents 51
  - 4-3-2 Accidents due to human voluntary actions 51
- 4-4 External accidents of natural origin 51
- References 51
- Chapter notes 51

## Chapter 5

### Severe accidents 53

- 5-1 Existing plants 53
- 5-2 Future plants: extreme and practicable solutions 55
- 5-3 Severe accident management: the present state of studies and implementations 57
- 5-4 Data on severe accidents 58
- 5-5 Descriptions of some typical accident sequences 58
  - 5-5-1 Loss of station electric power supply (TE = transient + loss of electrical supply) 58
  - 5-5-2 Loss of electric power with LOCA from the pump seals (SE = small LOCA + loss of electric power) 61
  - 5-5-3 Interfacing systems LOCA (V) 61
  - 5-5-4 Large LOCA with failure of the recirculation (ALFC) 62
  - 5-5-5 Small LOCA with failure of the recirculation (SLFC) 62
- 5-6 'Source terms' for severe accidents 62
- References 64

## Chapter 6

### The dispersion of radioactivity releases 65

- 6-1 The most interesting releases for safety evaluations 65
- 6-2 Dispersion of releases: phenomena 66
- 6-3 Release dispersion: simple evaluation techniques 70
- 6-4 Formulae and diagrams for the evaluation of atmospheric dispersion 71
- Reference 76
- Chapter notes 76

## Chapter 7

### Health consequences of releases 79

- 7-1 The principles of health protection and safety 79
- 7-2 Some quantities, terms and units of measure of health physics 79
- 7-3 Types of effects of radiation doses and limits 80
- 7-4 Evaluation of the health consequences of releases 81
  - 7-4-1 Evaluation of inhalation doses from radioactive iodine 81
  - 7-4-2 Evaluation of doses due to submersion in a radioactive cloud 81
  - 7-4-3 Evaluation of the doses of radiation from caesium-137 deposited on the ground ('ground-shine' dose) 81
  - 7-4-4 Evaluation of the dose due to deposition of plutonium on the ground 81
  - 7-4-5 Indicative evaluation of long distance doses for very serious accidents to nuclear reactors 82
  - 7-4-6 Direct radiation doses 82
- Reference 83
- Chapter notes 83

## Chapter 8

### The general approach to the safety of the plant-site complex 85

- 8-1 Introduction 85
- 8-2 The definition of the safety objectives of a plant on a site 85
  - 8-2-1 The objectives and limits of release/dose 85
- 8-3 Some plant characteristics for the prevention and mitigation of accidents 86
- 8-4 Radiation protection characteristics 86
- 8-5 Site characteristics 87

## Chapter 9

### Defence in depth 89

- 9-1 Definition, objectives, levels and barriers 89
- 9-2 Additional considerations on the levels of *Defence in Depth* 89

**Chapter 10****Quality assurance 93**

- 10-1 General remarks and requirements 93
- 10-2 Aspects to be underlined 93
- Reference 94

**Chapter 11****Safety analysis 95**

- 11-1 Introduction 95
- 11-2 Deterministic safety analysis 95
- 11-3 Probabilistic safety analysis 97
  - 11-3-1 Event trees 98
  - 11-3-2 Fault trees 99
  - 11-3-3 Failure rates 105

References 105

Chapter notes 105

**Chapter 12****Safety analysis review 107**

- 12-1 Introduction 107
- 12-2 The reference points 107
- 12-3 Foreseeing possible issues for discussion 107
- 12-4 Control is not disrespectful 108
- 12-5 Clarification is not disrespectful 109
- 12-6 Designer report 110
  - 12-6-1 Introduction 110
  - 12-6-2 Conclusions 110
  - 12-6-3 Hydrodynamic aspects 110
  - 12-6-4 Effective mass of oscillating system 111
  - 12-6-5 Evaluation of fluid damping 111
  - 12-6-6 Vibration analysis 111
- 12-7 Discussion 114

References 115

Chapter notes 115

**Chapter 13****Classification of plant components 117**

Reference 118

**Chapter 14****Notes on some plant components 117**

- 14-1 Reactor pressure vessel 119
  - 14-1-1 Problems highlighted by operating experience 119
  - 14-1-2 Rupture probability of non-nuclear vessels 120
  - 14-1-3 Failure probability of nuclear vessels 122
  - 14-1-4 Vessel material embrittlement due to neutron irradiation 124
  - 14-1-5 Pressurized thermal shock 126
  - 14-1-6 The reactor pressure vessel of Three Mile Island 2 126
  - 14-1-7 General perspective on the effect of severe accidents on the pressure vessel 127
  - 14-1-8 Recommendations for the prevention of hypothetical accidents generated by the pressure vessel 128
- 14-2 Piping 130
  - 14-2-1 Evolution of the regulatory positions 130
  - 14-2-2 Problems indicated by experience 130
  - 14-2-3 Leak detection in water reactors 132
  - 14-2-4 Research programmes on piping 133
- 14-3 Valves 134
  - 14-3-1 General remarks 134
  - 14-3-2 Some data from operating experience 134
  - 14-3-3 The most commonly used types of valve 135
  - 14-3-4 Types of valve: critical areas, design and operation 136
  - 14-3-5 Valve standards 140
- 14-4 Containment systems 141
- References 142

**Chapter 15****Earthquake resistance 145**

- 15-1 General aspects, criteria and starting data 145
- 15-2 Reference ground motion 148
- 15-3 Structural verifications 158
  - 15-3-1 Foundation soil resistance 158
  - 15-3-2 Resistance of structures 162
- References 182

**Chapter 16****Tornado resistance 185**

- 16-1 The physical phenomenon 185
- 16-2 Scale of severity of the phenomenon 186
- 16-3 Design input data 186
- Reference 187

**Chapter 17****Resistance to external impact 189**

- 17-1 Introduction 189
- 17-2 Aircraft crash impact 189
  - 17-2-1 Effects of an aircraft impact 189
  - 17-2-2 Overall load on a structure 189
  - 17-2-3 Vibration of structures and components 191
  - 17-2-4 Local perforation of structures 191
  - 17-2-5 The effect of a fire 192
  - 17-2-6 Temporary incapacity of the operating personnel 192
- 17-3 Pressure wave 192
- 17-5 Other impacts 193
- References 194

**Chapter 18****Nuclear safety criteria 195**

- 18-1 General characteristics 195
- 18-2 The US general design criteria 195
- 18-3 IAEA criteria 196
- 18-4 EUR criteria 196
- 18-5 Other general criteria compilations 197
- References 198
- Chapter notes 198

**Chapter 19****Nuclear safety research 199**

- Reference 199

**Chapter 20****Operating experience 201**

- 20-1 Introduction 201
- 20-2 Principal sources 201

- 20-3 Some significant events 201
  - 20-3-1 Mechanical events 201
  - 20-3-2 Electrical events 202
  - 20-3-3 System events 202
  - 20-3-4 Area events 203
  - 20-3-5 Reactivity accidents 204
  - 20-3-6 Possible future accidents 204
- 20-4 The International Nuclear Event Scale 205
- References 207

**Chapter 21****Underground location of nuclear power plants 209**

- References 212

**Chapter 22****The effects of nuclear explosions 215**

- 22-1 Introduction 215
- 22-2 Types of nuclear bomb 215
- 22-3 The consequences of a nuclear explosion 215
- 22-4 Initial nuclear radiation 217
- 22-5 Shock wave 217
- 22-6 Initial thermal radiation 218
- 22-7 Initial radioactive contamination ('fallout') 218
- 22-8 Underground nuclear tests 218
  - 22-8-1 Historical data on nuclear weapons tests 218
  - 22-8-2 The possible effects of an underground nuclear explosion 219
  - 22-8-3 The possible radiological effects of the underground tests 220
- References 220

**Chapter 23****Radioactive waste 221**

- 23-1 Types and indicative amounts of radioactive waste 221
- 23-2 Principles 222
- Reference 223

**Chapter 24****Fusion safety 225**

- References 228

**Chapter 25****Safety of specific plants and of other activities 229**

- 25-1 Boiling water reactors 229
- 25-2 Pressure tube reactors 231
- 25-3 Gas reactors 231
- 25-4 Research reactors 232
- 25-5 Sodium-cooled fast reactors 232
- 25-6 Fuel plants 233
- 25-7 Nuclear seawater desalination plants 233
- 25-8 VVER plants 234
- 25-9 Ship propulsion reactors 234
- 25-10 Safe transport of radioactive substances 234
- 25-11 Safety of radioactive sources and of radiation generating machines 234

References 235

**Chapter 26****Nuclear facilities on satellites 237**

- 26-1 Types of plant 237
- 26-2 Possible accidents and their consequences 238

Reference 238

**Chapter 27****Erroneous beliefs about nuclear safety 239**

References 241

**Chapter 28****When can we say that a particular plant is safe? 243****Chapter 29****The limits of nuclear safety: the residual risk 245**

- 29-1 Risk in general 245

- 29-2 Risk concepts and evaluations in nuclear installation safety 245
  - 29-2-1 Tolerable risk 245
  - 29-2-2 Risk-informed decisions 246
- 29-3 Residual risk: the concept of loss-of-life expectancy 247
- 29-4 Risk from various energy sources 247
- 29-5 Risk to various human activities 248
- 29-6 Are the risk analyses of nuclear power plants credible? 248
- 29-7 Proliferation and terrorism 250
