<b>PREFACE</b> .....	xv
<b>1. INTRODUCTION</b> .....	1
<b>2. FUNDAMENTAL EQUATIONS</b> .....	5
<b>2.1. Introduction</b> .....	5
<b>2.2. Conservation equations</b> .....	6
2.2.1. Species, momentum, and energy .....	6
2.2.2. Total mass conservation .....	7
2.2.3. Species mass fractions .....	7
2.2.4. Kinetic and internal energy .....	8
2.2.5. Species independent specific forces .....	9
<b>2.3. Thermodynamics</b> .....	10
2.3.1. Density and internal energy .....	10
2.3.2. Enthalpy .....	11
2.3.3. Mole fractions and molar concentrations .....	12
2.3.4. Enthalpy and temperature equations .....	12
2.3.5. Entropy and Gibbs function .....	13
2.3.6. Alternative formulations .....	14
2.3.7. Thermodynamic data .....	16

<b>2.4. Chemistry</b> .....	16
2.4.1. Elementary reactions .....	16
2.4.2. Maxwellian production rates .....	17
2.4.3. Total mass conservation .....	19
2.4.4. Notation for three-body reactions .....	19
2.4.5. Chemistry data .....	20
<b>2.5. Transport fluxes</b> .....	21
2.5.1. Viscous tensor, species mass fluxes, and heat flux .....	21
2.5.2. Diffusion velocities and diffusion matrix .....	23
2.5.3. Alternative formulations .....	24
2.5.4. Transport coefficients .....	25
<b>2.6. Entropy</b> .....	25
2.6.1. Entropy differential .....	25
2.6.2. Entropy equation .....	26
2.6.3. Entropy production .....	27
<b>2.7. Boundary conditions</b> .....	28
2.7.1. Dirichlet and Neumann boundary conditions .....	28
2.7.2. Porous walls .....	28
2.7.3. Catalytic plates .....	29
<b>2.8. Notes</b> .....	31
<b>2.9. References</b> .....	32
<b>3. APPROXIMATE AND SIMPLIFIED MODELS</b> .....	37
<b>3.1. Introduction</b> .....	37
<b>3.2. One-reaction chemistry</b> .....	39
3.2.1. One-reaction kinetics .....	39
3.2.2. Approximations for one-reaction kinetics .....	39
3.2.3. Simplified equations .....	41
3.2.4. Deficient reactants .....	42
<b>3.3. Small Mach number flows</b> .....	43
3.3.1. Orders of magnitude .....	43
3.3.2. Momentum equation and pressure splitting .....	44
3.3.3. Energy equation .....	44
3.3.4. Isobaric equations .....	45
3.3.5. Vorticity-velocity formulation .....	46
3.3.6. Strained flows .....	46
3.3.7. Shvab-Zeldovitch formulation .....	50

3.4.	Coupling .....	52
3.4.1.	Coupling of partial differential equations .....	52
3.4.2.	Dilution approximation .....	53
3.4.3.	Constant density approximation .....	53
3.5.	Notes .....	54
3.6.	References .....	54
4.	DERIVATION FROM THE KINETIC THEORY .....	59
4.1.	Introduction .....	59
4.2.	Kinetic framework .....	60
4.2.1.	Distribution functions .....	60
4.2.2.	Macroscopic properties .....	60
4.2.3.	Boltzmann equations .....	61
4.2.4.	Scattering source terms .....	62
4.2.5.	Reactive source terms .....	63
4.2.6.	Examples .....	64
4.3.	Kinetic entropy .....	66
4.3.1.	Definition of the kinetic entropy .....	66
4.3.2.	Kinetic entropy equation .....	66
4.3.3.	Positivity of entropy production .....	67
4.4.	Enskog expansion .....	68
4.4.1.	Asymptotic orders .....	68
4.4.2.	Collisional invariants of the fast operator .....	69
4.4.3.	Macroscopic equations .....	69
4.5.	Zero-order approximation .....	70
4.5.1.	Maxwellian distributions .....	70
4.5.2.	Zero-order macroscopic equations .....	72
4.5.3.	Zero-order time derivatives .....	73
4.6.	First-order approximation .....	73
4.6.1.	Linearized Boltzmann operator .....	73
4.6.2.	Linearized Boltzmann equations .....	74
4.6.3.	Expansion of perturbed distributions .....	76
4.6.4.	Macroscopic equations and transport fluxes .....	77
4.6.5.	Transport coefficients .....	78
4.6.6.	Chemistry source terms .....	81
4.6.7.	Thermodynamics .....	83

4.7.	Transport linear systems .....	85
4.7.1.	Galerkin method .....	86
4.7.2.	Basis functions .....	87
4.7.3.	Structure of transport linear systems .....	89
4.7.4.	Sparse transport matrix .....	89
4.7.5.	Vanishing mass fractions .....	90
4.8.	Notes .....	90
4.9.	References .....	92
5.	TRANSPORT COEFFICIENTS .....	97
5.1.	Introduction .....	97
5.2.	Transport algorithms .....	98
5.2.1.	Transport linear systems .....	98
5.2.2.	Mathematical structure .....	98
5.2.3.	Direct inversion .....	99
5.2.4.	Iterative methods .....	99
5.2.5.	Empirical expressions .....	100
5.2.6.	Operational count .....	100
5.2.7.	Stability for vanishing mass fractions .....	101
5.3.	Molecular parameters .....	102
5.3.1.	Interaction potentials .....	102
5.3.2.	Collision integrals .....	103
5.3.3.	Viscosity of pure gases and binary diffusion .....	103
5.3.4.	Relaxation and diffusion of internal energy .....	104
5.3.5.	Transport data .....	105
5.4.	Shear viscosity .....	106
5.5.	Volume viscosity .....	107
5.6.	Diffusion matrix .....	108
5.7.	Thermal conductivity .....	110
5.8.	Thermal diffusion ratios .....	111
5.9.	Partial thermal conductivity .....	112
5.10.	Thermal diffusion coefficients .....	113
5.11.	Notes .....	113
5.12.	References .....	114

<b>6. MATHEMATICS OF THERMOCHEMISTRY</b> .....	119
<b>6.1. Introduction</b> .....	119
<b>6.2. Thermodynamics with volume densities</b> .....	121
6.2.1. State variables ( $T, \rho_1, \dots, \rho_n$ ) .....	121
6.2.2. Energy and enthalpy per unit volume .....	122
6.2.3. Entropy and Gibbs function per unit volume .....	123
6.2.4. Assumptions .....	124
6.2.5. Differentials and convexity .....	125
<b>6.3. Thermodynamics with mass densities</b> .....	126
6.3.1. State variables ( $T, p, Y_1, \dots, Y_n$ ) .....	126
6.3.2. Energy and enthalpy per unit mass .....	128
6.3.3. Entropy and Gibbs function per unit mass .....	129
6.3.4. Assumptions .....	130
6.3.5. Differentials and convexity .....	130
6.3.6. Miscellaneous .....	132
<b>6.4. Chemistry sources</b> .....	133
6.4.1. Chemical reactions .....	133
6.4.2. Maxwellian production rates .....	134
6.4.3. Assumptions .....	135
6.4.4. Mass weights .....	136
6.4.5. Mass conservation .....	136
6.4.6. Creation and destruction rates .....	137
6.4.7. Symmetric formulation for the rates of progress .....	138
<b>6.5. Positive equilibrium points</b> .....	139
6.5.1. Definition of equilibrium points .....	140
6.5.2. Equilibrium points with $T$ and $\rho$ fixed .....	141
6.5.3. Equilibrium points with $h$ and $p$ fixed .....	142
6.5.4. Smoothness of equilibrium points .....	145
<b>6.6. Boundary equilibrium points</b> .....	146
6.6.1. Definition of boundary equilibrium points .....	146
6.6.2. Decomposition chain property .....	147
<b>6.7. Inequalities near equilibrium</b> .....	147
6.7.1. Production rates and chemical dissipation .....	148
6.7.2. Entropy difference and chemical dissipation .....	149
<b>6.8. A global stability inequality</b> .....	150
<b>6.9. Notes</b> .....	152
<b>6.10. References</b> .....	154

<b>7. MATHEMATICS OF TRANSPORT COEFFICIENTS</b> . . .	157
<b>7.1. Introduction</b> . . . . .	157
7.1.1. Definition of transport fluxes . . . . .	158
7.1.2. Diffusion velocities . . . . .	158
7.1.3. Alternative formulations . . . . .	159
<b>7.2. Assumptions on transport coefficients</b> . . . . .	159
<b>7.3. Properties of diffusion matrices</b> . . . . .	161
7.3.1. First properties of the diffusion matrix $D$ . . . . .	161
7.3.2. First properties of the flux diffusion matrix $C$ . . . . .	162
7.3.3. Flux splitting . . . . .	163
7.3.4. Generalized inverses of $C$ and $D$ . . . . .	164
7.3.5. Modified diffusion coefficients . . . . .	166
<b>7.4. Properties of other coefficients</b> . . . . .	166
7.4.1. Alternative coefficients . . . . .	166
7.4.2. Waldmann coefficients . . . . .	167
<b>7.5. Diagonal diffusion</b> . . . . .	168
7.5.1. Irreducibility of $C$ and $D$ . . . . .	169
7.5.2. Matrix $E$ and mass fraction gradients . . . . .	169
7.5.3. Irreducibility of $CE$ and $DE$ . . . . .	170
7.5.4. Diagonal diffusion of $C$ and $D$ over $U^\perp$ . . . . .	171
7.5.5. Diagonal diffusion of $CE$ and $DE$ over $U^\perp$ . . . . .	172
7.5.6. Diagonal diffusion of $C$ and $D$ for $n - 1$ species . . . . .	174
7.5.7. Diagonal diffusion of $CE$ and $DE$ for $n - 1$ species . . . . .	176
<b>7.6. Diffusion inequalities</b> . . . . .	178
7.6.1. Fundamental diffusion inequality . . . . .	179
7.6.2. Positivity properties of $C$ . . . . .	180
<b>7.7. Stefan-Maxwell equations</b> . . . . .	180
7.7.1. Matrices $\Delta$ and $D$ . . . . .	181
7.7.2. Matrices $\Gamma$ and $C$ . . . . .	183
7.7.3. Diagonal first-order diffusion . . . . .	186
7.7.4. Asymptotic expansions of $D$ and $C$ . . . . .	187
<b>7.8. Notes</b> . . . . .	190
<b>7.9. References</b> . . . . .	190
<b>8. SYMMETRIZATION</b> . . . . .	193
<b>8.1. Introduction</b> . . . . .	193

8.2.	Vector notation	194
8.2.1.	Conservative and natural variables	194
8.2.2.	Vector equations	195
8.3.	Quasilinear form	196
8.3.1.	The map $Z \rightarrow U$	196
8.3.2.	Dissipation matrices and quasilinear form	197
8.4.	Symmetrization and entropic variables	198
8.4.1.	Symmetric conservative forms	198
8.4.2.	Entropic variables	199
8.4.3.	The equivalence theorem	199
8.5.	Normal forms	201
8.5.1.	Definition of normal forms	201
8.5.2.	Nullspace invariance property	203
8.5.3.	Description of normal variables	205
8.6.	Symmetrization for multicomponent flows	207
8.6.1.	Entropy and symmetric conservative form	207
8.7.	Normal forms for multicomponent flows	210
8.7.1.	Nullspace of dissipation matrices	211
8.7.2.	First normal form	213
8.7.3.	Natural normal form	215
8.7.4.	Intermediate normal form	217
8.8.	Notes	219
8.9.	References	219
9.	ASYMPTOTIC STABILITY	221
9.1.	Introduction	221
9.2.	Governing equations	222
9.2.1.	Abstract system	222
9.2.2.	Equilibrium points	222
9.2.3.	Entropy equation	222
9.2.4.	Functional spaces	223
9.3.	Local dissipative structure	224
9.3.1.	Linearized equations	224
9.3.2.	Locally stable source terms	225
9.3.2.	Global dissipative structure	225

<b>9.4. Global existence theorem</b> .....	226
9.4.1. Main result .....	226
9.4.2. Local existence .....	227
9.4.3. A priori estimates .....	228
9.4.4. More a priori estimates .....	230
9.4.5. Global existence proof .....	232
<b>9.5. Decay estimates</b> .....	233
<b>9.6. Local dissipativity for multicomponent flows</b> .....	236
9.6.1. Chemical sources .....	236
9.6.2. Local dissipative structure .....	237
9.6.3. Linearized source term .....	238
<b>9.7. Global existence for multicomponent flows</b> .....	239
9.7.1. Linearized normal form .....	239
9.7.2. Global existence and asymptotic stability .....	241
<b>9.8. Notes</b> .....	242
<b>9.9. References</b> .....	243
<b>10. CHEMICAL EQUILIBRIUM FLOWS</b> .....	245
<b>10.1. Introduction</b> .....	245
<b>10.2. Governing equations</b> .....	246
10.2.1. Notation associated with equilibrium .....	246
10.2.2. Atomic species and formation reactions .....	248
10.2.3. Equations at chemical equilibrium .....	249
10.2.4. Conservative and natural variables .....	250
10.2.5. Fluxes at chemical equilibrium .....	253
10.2.6. Quasilinear form at chemical equilibrium .....	253
<b>10.3. Entropy and symmetrization</b> .....	253
10.3.1. Entropy at chemical equilibrium .....	254
10.3.2. Symmetrized equations .....	255
<b>10.4. Normal forms</b> .....	257
10.4.1. Nullspace invariance property .....	257
10.4.2. Intermediate normal form .....	258
<b>10.5. Global existence</b> .....	260
10.5.1. Local dissipativity .....	260
10.5.2. Global existence .....	261
<b>10.6. Notes</b> .....	263

10.7. References .....	263
<b>11. ANCHORED WAVES</b> .....	<b>265</b>
11.1. Introduction .....	265
11.2. Governing equations .....	266
11.2.1. Conservation equations .....	267
11.2.2. Thermodynamic properties .....	268
11.2.3. Maxwellian chemistry .....	269
11.2.4. Transport fluxes .....	269
11.2.5. The temperature equation .....	270
11.2.6. Boundary conditions .....	271
11.2.7. Equilibrium limit .....	273
11.2.8. The matrix $\mathcal{L}$ .....	274
11.2.9. Entropy conservation equation .....	275
11.3. First properties .....	277
11.3.1. Preliminaries .....	277
11.3.2. Reduction to a problem on $[0, \infty)$ .....	278
11.3.3. Extension to $(-\infty, 0)$ .....	279
11.4. Existence on a bounded domain .....	281
11.4.1. Preliminaries .....	282
11.4.2. Fixed point formulation .....	283
11.4.3. Existence of the degree .....	284
11.4.4. Calculation of the degree .....	291
11.5. Existence of solutions .....	293
11.5.1. Uniform estimates for $c$ .....	293
11.5.2. Convergence towards equilibrium .....	297
11.5.3. Passage to the limit $a \rightarrow \infty$ .....	298
11.6. Notes .....	298
11.7. References .....	298
<b>12. NUMERICAL SIMULATIONS</b> .....	<b>301</b>
12.1. Introduction .....	301
12.2. Laminar flame model .....	302
12.2.1. Governing equations .....	302
12.2.2. Boundary conditions .....	304
12.2.3. Chemical mechanism .....	305

<b>12.3. Computational considerations</b> .....	306
12.3.1. Discretized equations .....	306
12.3.2. Multiple time scales .....	307
12.3.3. Multiple space scales .....	307
12.3.4. Nonlinear solvers .....	307
12.3.5. Pseudo-unsteady iterations .....	308
12.3.6. Thermochemistry and transport software.....	308
<b>12.4. Hydrogen–Air Bunsen flame</b> .....	308
12.4.1. Burner geometry .....	308
12.4.2. Numerical results .....	309
