<i>Preface to the Third Edition</i>	v
<i>Preface to the Second Edition</i>	vii
<i>Preface to the First Edition</i>	ix
<b>1. Introduction</b>	<b>1</b>
<b>2. Stoichiometry</b>	<b>5</b>
I. Units and Fundamental Relationships	5
A. Units	5
B. Gas Laws	5
C. Energy	10
II. Systems Analysis	19
A. General Approach	19
B. Analyses	21
III. Material Balances	29
A. Balances Based on Fuel Analysis	29
B. Balances Based on Flue Gas Analysis	33
C. Cross-Checking Between Fuel and Flue Gas Analysis	35
IV. Energy Balances	35
V. Equilibrium	42
VI. Combustion Kinetics	49
A. Introduction to Kinetics	51
B. Kinetics of Carbon Monoxide Oxidation	56
C. Kinetics of Soot Oxidation	60
D. Kinetics of Waste Pyrolysis and Oxidation	61
<b>3. Selected Topics on Combustion Processes</b>	<b>73</b>
I. Gaseous Combustion	73
	xi

A.	The Premixed (Bunsen) Laminar Flame	74
B.	The Diffusion Flame	74
II.	Liquid Combustion	77
A.	Pool Burning	77
B.	Droplet Burning	79
III.	Solid Combustion	83
A.	Thermal Decomposition	85
B.	Particle Burning Processes	97
C.	Mass Burning Processes	99
<b>4.</b>	<b>Waste Characterization</b>	<b>101</b>
I.	General	105
A.	Chemistry	105
B.	Heat of Combustion	106
C.	Ash Fusion Characteristics	109
D.	Smoking Tendency	114
II.	Solid Waste	115
A.	Solid Waste Composition	116
B.	Solid Waste Properties	123
III.	Biological Wastewater Sludge	148
A.	Sludge Composition	150
B.	Sludge Properties	150
<b>5.</b>	<b>Combustion System Enclosures and Heat Recovery</b>	<b>159</b>
I.	Enclosures	159
A.	Refractory Enclosure Systems	160
B.	Water-Cooled Enclosures and Heat Recovery Systems	177
II.	Heat Transfer	189
A.	Conduction	189
B.	Convection	192
C.	Radiation	192
D.	Heat Transfer Implications in Design	193
III.	Slagging and Fouling	194
<b>6.</b>	<b>Fluid Flow Considerations in Incinerator Applications</b>	<b>197</b>
I.	Driven Flow	197
A.	Jet Flow	197
B.	Swirling Flows	230
II.	Induced Flow	237
A.	Jet Recirculation	238
B.	Buoyancy	243
III.	Mixing and Residence Time	245
A.	Fundamental Distribution Relationships	245
B.	Common Distribution Functions	246
C.	Failure Modes	246
D.	Residence Time Scenarios	247

<b>7. Materials Preparation and Handling</b>	<b>251</b>
I. Solid Wastes	251
A. General	251
B. Pit and Crane Handling of Solid Wastes	252
C. Size Reduction of Municipal Solid Wastes	255
D. Conveying of Solid Wastes	259
E. Size Classification and Screening	265
F. Ferrous Metal Separation	267
II. Sludge Handling	268
A. General	268
B. Sludge Pumping in Pipes	269
<b>8. Incineration Systems for Municipal Solid Wastes</b>	<b>273</b>
I. Performance Objectives	274
A. Throughput and Refuse Heat Content	275
B. The Firing Diagram: The Overall Process Envelope	277
C. Plant Availability	277
II. Site Design Considerations	280
A. Site Grading	280
B. Site Drainage	281
C. Site Traffic and Road Considerations	281
III. Collection and Delivery of Refuse	281
IV. Refuse Handling and Storage	283
A. Tipping Floor-Based Waste Storage and Reclaim Systems	283
B. Pit and Crane-Based Waste Storage and Reclaim Systems	284
C. Bin Storage and Reclaim Systems for RDF	285
V. Size Control and Salvage	286
VI. Incinerator Feed Systems	286
A. Feed Systems for Floor Dump Receipt and Storage	286
B. Feed Systems for Pit and Crane Receipt and Storage Systems	287
VII. Grates and Hearths	293
A. Stationary Hearth	293
B. Rotary Kiln	293
C. Stationary Grates	294
D. Mechanical Grates: Batch Operations	294
E. Mechanical Grates: Continuous Operations	295
F. O'Conner Rotary Combustor (Kiln)	302
G. Fluid Bed Systems	302
VIII. Incinerator Furnace Enclosures	303
A. Refractory Enclosures	304
B. Other Enclosure-Related Design Considerations	306
IX. Energy Markets and Energy Recovery	312
A. Market Size	312
B. Market Type	313
C. Market Reliability	313
D. Revenue Reliability	314
X. Combustion Air	314
A. Underfire Air	314

	B. Overfire Air	315
	C. Secondary Air	315
	D. Combustion Air Fans	316
	E. Air Preheat	316
XI.	Ash Removal and Handling	318
	A. Overview of Ash Problems	318
	B. Ash Properties	319
	C. Bottom Ash	324
	D. Siftings	327
	E. Fly Ash	327
	F. Materials Recovery from Ash	327
XII.	Flue Gas Conditioning	330
	A. Cooling by Water Evaporation	330
	B. Cooling by Air Dilution	335
	C. Cooling by Heat Withdrawal	335
	D. Steam Plumes	336
XIII.	Environmental Pollution Control	338
	A. Air Pollution	339
	B. Water Pollution	342
	C. Noise Pollution	343
XIV.	Induced Draft Fan	343
	A. Fan Types	343
	B. Inlet and Outlet Connections	344
	C. Fan Control	344
XV.	Incinerator Stacks	345
XVI.	Refuse-Derived Fuel Systems	347
	A. RDF Processing	349
	B. RDF Combustion Systems	349
XVII.	Instrumentation and Control	357
	A. Instrumentation and Control System Design Approach	357
	B. Process Measurements and Field Instruments	358
	C. Control System Levels	359
	D. General Control Philosophy	361
	E. Portable Instruments	369
	F. Summary	370
XVIII.	Operations	370
	A. Mass Burn Incineration	370
	B. RDF Incineration	370
<b>9.</b>	<b>Incineration Systems for Sludge Wastes</b>	<b>375</b>
	I. Multiple-Hearth Furnace (MHF) Systems	377
	A. Process Characteristics	377
	B. Process Relationships	383
	II. Fluid Bed Systems	389
	A. Process Characteristics	391
	B. Process Relationships (Oxidizing Mode)	395
	C. Operating Characteristics	403
	D. General Environmental Considerations	405

III.	Slagging Combustion Systems for Biological Sludge	406
A.	Kubota System	406
B.	Itoh Takuma System	407
<b>10.</b>	<b>Incineration Systems for Liquid and Gaseous Wastes</b>	<b>409</b>
I.	Liquid Waste Incinerators	409
A.	Liquid Storage	409
B.	Atomization	410
C.	Ignition Tiles	414
D.	Combustion Space	415
E.	Incinerator Types	416
II.	Incinerators for Gases (Afterburners)	416
A.	Energy Conservation Impacts on Afterburner Design	417
B.	Current Afterburner Engineering Technology	419
C.	Afterburner Systems	424
D.	Potential Applications	433
III.	Operations and Safety	434
<b>11.</b>	<b>Incineration Systems for Hazardous Wastes</b>	<b>437</b>
I.	General	437
A.	Receiving and Storage Systems	439
B.	Firing Systems	442
C.	Control Systems	445
D.	Refractory	446
E.	Air Pollution Control for Hazardous Waste Incinerators	447
F.	Evaluation Tests and POHC Selection	448
II.	Rotary Kiln Systems	451
A.	Sludge Incineration Applications	454
B.	Solid Waste Incineration Applications	455
III.	Circulating Fluid Bed	459
A.	CFB Hydrodynamics	460
IV.	Thermal Desorption	461
A.	Soil Parameters	461
B.	Thermal Desorption Systems	464
C.	Operating Parameters	466
D.	Remediation Performance	468
V.	Plasma Technology	468
<b>12.</b>	<b>Other Incineration Systems for Solid Wastes</b>	<b>471</b>
I.	Multiple Chamber (Hearth or Fixed Grate)	471
II.	Multiple Chamber (Moving Grate)	474
III.	Modular Starved Air	474
IV.	Open Pit Type	475
V.	Conical (Tepee) Type	478
VI.	Gasification Processes for MSW	479
A.	General	481
B.	Gasification of an RDF by Partial Combustion	482

C.	Gasification of an RDF by Pyrolysis and Steam Reforming (Battelle)	488
D.	Gasification of Raw MSW by Pyrolysis	492
<b>13.</b>	<b>Air Pollution Aspects of Incineration Processes</b>	<b>501</b>
I.	Air Pollutants from Combustion Processes	501
A.	Particulate Matter	503
B.	Combustible Solids, Liquids, and Gases	517
C.	Gaseous Pollutants Related to Fuel Chemistry	520
D.	Nitrogen Oxides	523
II.	Air Toxics	529
A.	Metal Emission Rates	531
B.	Emissions of Organic Compounds	544
<b>14.</b>	<b>Air Pollution Control for Incineration Systems</b>	<b>553</b>
I.	Equipment Options for Incinerator Air Pollution Control	555
A.	Settling Chambers	555
B.	Cyclones and Inertial Collectors	555
C.	Wet Scrubbers	558
D.	Electrostatic Precipitators	568
E.	Fabric Filter (Baghouse)	576
F.	Absorbers	583
G.	Specialized Abatement Technology	589
II.	Control Strategies for Incinerator Air Pollution Control	598
A.	Air Pollution Control through Process Optimization	598
B.	Control Selections for Incinerator Types	599
C.	Continuous-Emission Monitoring	603
D.	Air Pollution Control to Achieve Air-Quality Objectives	604
<b>15.</b>	<b>Approaches to Incinerator Selection and Design</b>	<b>615</b>
I.	Characterize the Waste	615
II.	Lay Out the System in Blocks	616
III.	Establish Performance Objectives	616
IV.	Develop Heat and Material Balances	616
V.	Develop Incinerator Envelope	616
VI.	Evaluate Incinerator Dynamics	616
VII.	Develop the Designs of Auxiliary Equipment	617
VIII.	Develop Incinerator Economics	617
A.	General	618
IX.	Build and Operate	622
<i>Appendices</i>		
A.	<i>Symbols: A Partial List</i>	623
B.	<i>Conversion Factors</i>	627
C.	<i>Periodic Table of Elements</i>	631
D.	<i>Combustion Properties of Coal, Oil, Natural Gas, and Other Materials</i>	633
E.	<i>Pyrometric Cone Equivalent</i>	645

<i>F. Spreadsheet Templates for Use in Heat and Material Balance Calculations</i>	<i>647</i>
<i>A. Heat and Material Balance Spreadsheets</i>	<i>648</i>
<i>B. Heat of Combustion Calculator: HCOMB.xls</i>	<i>651</i>
<i>C. Moisture Correction in Refuse Analyses: Moisture.xls</i>	<i>651</i>
<i>D. Equilibrium Constant Estimation: Equil.xls</i>	<i>655</i>
<i>E. Steam.exe Program</i>	<i>659</i>
<i>G. Thermal Stability Indices</i>	<i>659</i>
<i>Notes and References</i>	<i>677</i>
<i>Index</i>	<i>701</i>
