CONTENTS

1. Elementary wave mechanics 3
   - 1.1 The Schrödinger equation 3
   - 1.2 Variational principle for the ground state 5
   - 1.3 The Hartree–Fock approximation 7
   - 1.4 Correlation energy 13
   - 1.5 Electron density 14
   - 1.6 Hellmann–Feynman theorems and virial theorem 16

2. Density matrices 20
   - 2.1 Description of quantum states and the Dirac notation 20
   - 2.2 Density operators 24
   - 2.3 Reduced density matrices for fermion systems 27
   - 2.4 Spinless density matrices 32
   - 2.5 Hartree–Fock theory in density-matrix form 35
   - 2.6 The N-representability of reduced density matrices 40
   - 2.7 Statistical mechanics 44

3. Density-functional theory 47
   - 3.1 The original idea: The Thomas–Fermi model 47
   - 3.2 The Hohenberg–Kohn theorems 51
   - 3.3 The v- and N-representability of an electron density 53
   - 3.4 The Levy constrained-search formulation 56
   - 3.5 Finite-temperature canonical-ensemble theory 60
   - 3.6 Finite-temperature grand-canonical-ensemble theory 64
   - 3.7 Finite-temperature ensemble theory of classical systems 66

4. The chemical potential 70
   - 4.1 Chemical potential in the grand canonical ensemble at zero temperature 70
   - 4.2 Physical meaning of the chemical potential 74
   - 4.3 Detailed consideration of the grand canonical ensemble near zero temperature 75
   - 4.4 The chemical potential for a pure state and in the canonical ensemble 81
   - 4.5 Discussion 84

5. Chemical potential derivatives 87
5.1 Change from one ground state to another 87
5.2 Electronegativity and electronegativity equalization 90
5.3 Hardness and softness 95
5.4 Reactivity index: the Fukui function 99
5.5 Local softness, local hardness, and softness and hardness kernels 101

6. Thomas–Fermi and related models 105
6.1 The traditional TF and TFD models 105
6.2 Implementation 110
6.3 Three theorems in Thomas–Fermi theory 114
6.4 Assessment and modification 116
6.5 An alternative derivation and a Gaussian model 118
6.6 The purely local model 123
6.7 Conventional gradient correction 127
6.8 The Thomas–Fermi–Dirac–Weizsacker model 132
6.9 Various related considerations 136

7. The Kohn–Sham method: Basic principles 142
7.1 Introduction of orbitals and the Kohn–Sham equations 142
7.2 Derivation of the Kohn–Sham equations 145
7.3 More on the kinetic-energy functional 149
7.4 Local-density and $X\alpha$ approximations 152
7.5 The integral formulation 157
7.6 Extension to nonintegral occupation numbers and the transition-state concept 163

8. The Kohn–Sham method: Elaboration 169
8.1 Spin-density-functional theory 169
8.2 Spin-density functionals and the local spin-density approximations 174
8.3 Self-interaction correction 180
8.4 The Hartree–Fock–Kohn–Sham method 183
8.5 The exchange-correlation-energy functional via the exchange-correlation hole 186
8.6 The exchange-correlation-energy functional via wave-vector analysis 194
8.7 Other studies of the exchange-correlation-energy functional 197

9. Extensions 201
9.1 Finite-temperature Kohn–Sham theory 201
9.2 Excited states 204

9.3 Time-dependent systems 208
9.4 Dynamic linear response 210
9.5 Density-matrix-functional theory 213
9.6 Nonelectronic and multicomponent systems 215

10. Aspects of atoms and molecules 218
10.1 Remarks on the problem of chemical binding 218
10.2 Interatomic forces 219
10.3 Atoms in molecules 221
10.4 More on the HSAB principle 224
10.5 Modeling the chemical bond: The bond-charge model 229
10.6 Semiempirical density-functional theory 234

11. Miscellany 237
11.1 Scaling relations 237
11.2 A maximum-entropy approach to density-functional theory 239
11.3 Other topics 243
11.4 Final remarks 244

Appendix A Functionals 246
Appendix B Convex functions and functionals 255
Appendix C Second quantization for fermions 259
Appendix D The Wigner distribution function and the $\hbar$ semiclassical expansion 265
Appendix E The uniform electron gas 271
Appendix F Tables of values of electronegativities and hardnesses 276
Appendix G The review literature of density-functional theory 281
