

## Table of Contents

<b>1. The Elements: Origins and Discovery</b>	7
Introduction	7
Modern Atomism	7
Twentieth Century Science	7
The Electron	7
Discovery of Radioactivity	7
Structure of the Atom	8
Kelvin-Thomson "Plum Pudding" Atom	8
Rutherford's Planetary Model of the Atom	8
Bohr-Sommerfeld Model of the Atom	8
The Neutron	10
Wave / Particle Duality: de Broglie Relation and Wave Mechanics	10
Classification of the Elements	10
Synthesis of the Elements in Nature	12
<b>2. The Chart of the Nuclides</b>	13
Introduction	13
History of the Karlsruhe Nuclide Chart	14
Radioactive Decay Processes and Branching on the Nuclide Chart	15
Nuclear Reactions on the Nuclide Chart	16
Modes of Radioactive Decay	17
Explanation of the Chart of the Nuclides (English / German)	21
Explanation of the Chart of the Nuclides (Spanish / French)	27
Explanation of the Chart of the Nuclides (Chinese / Russian)	33
Nuclides and Half-lives for $A \sim 266$	38
Table of New and Updated Nuclides in the 7 <sup>th</sup> Edition (2006)	39
Fission (shape) Isomers	40
<b>3. Additional Material</b>	41
The Range of Charged Particles in Matter	41
Definition and Units of Radiological Quantities	41
Properties of the Elements by Atomic Number	42
IUPAC Periodic Table of the Elements	44
