

CONTENTS

SUMMARY	1
1. INTRODUCTION	3
1.1. Background	3
1.2. Objective	5
1.3. Scope	5
2. MATERIALS ARISING IN LARGE QUANTITIES DURING DECOMMISSIONING	6
2.1. Overview	6
2.2. Range of decommissioning materials and wastes	7
2.3. Typical materials arising in the decommissioning of specific nuclear facilities	8
2.3.1. Refining and conversion	8
2.3.2. Enrichment	9
2.3.3. Fuel fabrication	9
2.3.4. Nuclear power plants	10
2.3.5. Spent fuel reprocessing	13
2.3.6. Research, institutional and industrial facilities	14
3. STRATEGIES FOR THE DISPOSITION OF LARGE AMOUNTS OF DECOMMISSIONING MATERIALS	15
3.1. General considerations	15
3.2. Potential approaches for the disposition of decommissioning materials/waste	17
3.3. Unconditionally released materials for recycling or reuse	19
3.4. Unconditionally released materials for disposal	20
3.5. Radioactive material for conditional recycling/reuse within the non-nuclear industry	21
3.6. Radioactive material for conditional recycling/reuse within the nuclear industry	22
3.7. LLW disposed of in a dedicated repository or storage facility	24
3.8. VLLW disposed of in an appropriate storage or disposal facility	26

4.	FACTORS AND CONSTRAINTS INFLUENCING OPTIONS FOR THE DISPOSITION OF MATERIALS IN DECOMMISSIONING	29
4.1.	Quantities of materials	30
4.2.	Technical feasibility and availability of technology	31
4.2.1.	Infrastructure	31
4.2.2.	Transportation	32
4.2.3.	Characteristics of radiological contamination	32
4.2.4.	Dilution with radiologically clean materials	33
4.2.5.	Melting	34
4.2.6.	Chemical toxicity of radioactive materials	36
4.3.	Cost and economics	37
4.4.	Radiological factors and the application of clearance levels. . .	39
4.5.	National policy, public acceptance and legal liability	40
4.5.1.	National policy	40
4.5.2.	Public acceptance	41
4.5.3.	Legal liability	43
4.6.	Final status of decommissioning activities	44
4.6.1.	Site end state	44
4.6.2.	Disposal options: Availability and limitations	44
4.6.3.	Storage options: Availability and limitations	44
4.7.	Hazards and risks to people and the environment	45
4.8.	QA and documentation	46
4.9.	Environmental and ethical issues	47
4.9.1.	Sustainability	47
4.9.2.	Global optimization: Full cycle impact	48
4.10.	Methodology for decision making for selecting disposition options based on specific influencing factors	49
5.	METHODOLOGIES TO EVALUATE AND CHARACTERIZE MATERIALS AND WASTES FOR DISPOSITION	51
5.1.	Facility/site characterization	53
5.1.1.	Historical information	53
5.1.2.	Calculation methods	54
5.1.3.	Characterization of the survey plan	55
5.1.4.	In situ measurements	55
5.1.5.	Sampling and analysis	57
5.1.6.	Data evaluation and verification	59
5.2.	Material management strategy	59

5.3.	Monitoring strategy	62
5.3.1.	Scaling factors (vectors)	63
5.3.2.	Conversion of regulatory criteria into in-field or laboratory measurement	65
5.3.3.	Main factors affecting measurement methodology ...	65
5.3.3.1.	Type of material and its physicochemical composition	66
5.3.3.2.	Geometry of the material and accessibility to remaining contamination	66
5.3.3.3.	Surface condition	66
5.3.3.4.	Type of contamination	67
5.3.3.5.	Homogeneity versus inhomogeneity of contamination	67
5.3.3.6.	Averaging in monitoring procedures	67
5.3.3.7.	Background level of radiation	68
5.3.3.8.	Efficiency determination	68
5.3.4.	Measurement uncertainties and their acceptability ...	69
5.3.5.	Determination of the detection limit	71
5.4.	Review of typical monitoring methodologies	71
5.4.1.	Direct measurements	72
5.4.2.	Indirect measurements	76
5.4.3.	Factors influencing the quality of monitoring methodologies	77
6.	CONCLUSIONS	79
	REFERENCES	81
	ANNEX I: NATIONAL AND PROJECT CASE STUDIES	89
	ANNEX II: LESSONS LEARNED.....	187
	GLOSSARY	197
	CONTRIBUTORS TO DRAFTING AND REVIEW	201
