

Table of Contents

1	Hors d'œuvre	1
1.1	Fundamental Constituents of Matter	1
1.2	Fundamental Interactions	2
1.3	Symmetries and Conservation Laws	4
1.4	Experiments	5
1.5	Units	6

Part I Analysis: The Building Blocks of Matter

2	Global Properties of Nuclei	11
2.1	The Atom and its Constituents	11
2.2	Nuclides	13
2.3	Parametrisation of Binding Energies	18
2.4	Charge Independence of the Nuclear Force and Isospin	21
	Problem	23
3	Nuclear Stability	25
3.1	β -Decay	26
3.2	α -Decay	31
3.3	Nuclear Fission	33
3.4	Decay of Excited Nuclear States	35
	Problems	39
4	Scattering	41
4.1	General Observations About Scattering Processes	41
4.2	Cross Sections	44
4.3	The "Golden Rule"	48
4.4	Feynman Diagrams	49
	Problems	52
5	Geometric Shapes of Nuclei	53
5.1	Kinematics of Electron Scattering	53
5.2	The Rutherford Cross-Section	56
5.3	The Mott Cross-Section	60

5.4	Nuclear Form Factors	61
5.5	Inelastic Nuclear Excitations	69
	Problems	71
6	Elastic Scattering off Nucleons	73
6.1	Form Factors of the Nucleons	73
6.2	Quasi-elastic Scattering	78
6.3	Charge Radii of Pions and Kaons	80
	Problems	82
7	Deep Inelastic Scattering	83
7.1	Excited States of the Nucleons	83
7.2	Structure Functions	85
7.3	The Parton Model	89
7.4	Interpretation of Structure Functions in the Parton Model	91
	Problems	95
8	Quarks, Gluons, and the Strong Interaction	97
8.1	The Quark Structure of Nucleons	97
8.2	Quarks in Hadrons	102
8.3	The Quark–Gluon Interaction	103
8.4	Scaling Violations of the Structure Functions	108
	Problem	111
9	Particle Production in e^+e^- Collisions	113
9.1	Lepton Pair Production	114
9.2	Resonances	118
9.3	Non-resonant Hadron Production	123
9.4	Gluon Emission	125
	Problems	126
10	Phenomenology of the Weak Interaction	127
10.1	Properties of Leptons	128
10.2	The Types of Weak Interactions	132
10.3	Coupling Strength of the Weak Interaction	134
10.4	The Quark Families	139
10.5	The Lepton families	142
10.6	Majorana Neutrino?	144
10.7	Parity Violation	144
10.8	Deep Inelastic Neutrino Scattering	147
	Problems	150

11 Exchange Bosons of the Weak Interaction	151
11.1 Real W and Z Bosons	151
11.2 Electroweak Unification	156
Problem	163
12 The Standard Model	165
<hr/>	
Part II Synthesis: Composite Systems	
<hr/>	
13 Quarkonia	171
13.1 The Hydrogen Atom and Positronium Analogues	171
13.2 Charmonium	174
13.3 Quark–Antiquark Potential	177
13.4 The Chromomagnetic Interaction	180
13.5 Bottomium and Toponium	181
13.6 The Decay Channels of Heavy Quarkonia	183
13.7 Decay Widths as a Test of QCD	185
Problems	187
14 Mesons Made from Light Quarks	189
14.1 Mesonic Multiplets	189
14.2 Meson Masses	193
14.3 Decay Channels	195
14.4 Neutral Kaon Decay	197
Problems	199
15 The Baryons	201
15.1 The Production and Detection of Baryons	201
15.2 Baryon Multiplets	207
15.3 Baryon Masses	210
15.4 Magnetic Moments	213
15.5 Semileptonic Baryon Decays	217
15.6 How Good is the Constituent Quark Concept?	225
Problems	226
16 The Nuclear Force	229
16.1 Nucleon–Nucleon Scattering	230
16.2 The Deuteron	234
16.3 Nature of the Nuclear Force	237
Problems	243

17	The Structure of Nuclei	245
	17.1 The Fermi Gas Model	245
	17.2 Hypernuclei	250
	17.3 The Shell Model	253
	17.4 Deformed Nuclei	261
	17.5 Spectroscopy Through Nuclear Reactions	264
	17.6 β -Decay of the Nucleus	271
	17.7 Double β -decay	279
	Problems	283
18	Collective Nuclear Excitations	285
	18.1 Electromagnetic Transitions	286
	18.2 Dipole Oscillations	289
	18.3 Shape Oscillations	297
	18.4 Rotation States	300
	Problems	309
19	Nuclear Thermodynamics	311
	19.1 Thermodynamical Description of Nuclei	312
	19.2 Compound Nuclei and Quantum Chaos	314
	19.3 The Phases of Nuclear Matter	317
	19.4 Particle Physics and Thermodynamics in the Early Universe .	322
	19.5 Stellar Evolution and Element Synthesis	330
	Problems	336
20	Many-Body Systems in the Strong Interaction	337
A	Appendix	341
	A.1 Accelerators	341
	A.2 Detectors	348
	A.3 Combining Angular Momenta	358
	A.4 Physical Constants	360
	Solutions to the Problems	361
	References	385
	Index	393
