Contents

1 Introduction 1
1.1 A pleasant experiment 1
1.2 Scope of this book 3
1.3 The elements of foam structure 6
1.4 Metastability 8
1.5 Essential properties of a foam 10
1.5.1 Both a solid and a liquid 10
1.5.2 Drainage 10
1.5.3 Coarsening 11
1.5.4 Collapse 12
1.6 Length and time scales 12
1.7 Early history 14
1.8 Foam as a prototypical system 17
Bibliography 18

2 Local equilibrium rules 21
2.1 The law of Laplace 21
2.2 Laplace's law in two dimensions 23
2.3 The laws of Plateau 24
2.4 Laplace's law at a Plateau border junction 26
2.5 Bubble–bubble interaction 26
Bibliography 27

3 Quantitative description of foam structures 28
3.1 Some necessary definitions 28
3.2 Statistics 29
3.3 Some further theorems and correlations 31
3.3.1 Aboav–Weaire law 31
3.3.2 Curvature sum rule in two dimensions 32
3.3.3 Curvature sum rule in three dimensions 33
3.3.4 Euler's equation 33
3.3.5 An application of Euler's equation for two-dimensional wet foams 34
3.4 Topological changes 34
3.5 Systematic expansions in the dry foam limit 37
3.6 Quantitative description of topological changes 37
3.7 The osmotic pressure 39

3.8 Vertex stability 41
3.9 Other instabilities 42
3.10 Wet vertices 43
3.11 The surface liquid fraction 46

4 Making foams 47
4.1 Foam composition 47
4.2 Different methods of foam production 47
4.3 Blowing bubbles with a nozzle – some practical advice 50
4.4 Foam tests 51
4.5 Foams in microgravity 52
4.6 Two-dimensional foams 53
Bibliography 55

5 Imaging and probing foam structure 56
5.1 Matzke's experiment 56
5.2 Visual imaging and optical tomography 57
5.3 The principle of Archimedes 61
5.4 Segmented measurements of capacitance and resistance 64
5.4.1 AC capacitance measurement 65
5.4.2 Conductance measurement 66
5.5 MRI 68
5.6 Optical glass fibre probe method 69
5.7 Optical measurement of film thinning 71
5.8 Light scattering 72
5.9 Fluorescence 74
Bibliography 74

6 Simulation and modelling 75
6.1 Simulating two-dimensional dry foam 75
6.2 Two-dimensional wet foam 77
6.3 Three-dimensional foam 78
6.4 Other representations of foams 81
6.4.1 Vertex models 81
6.4.2 Q-Potts models 83
6.5 Models based on bubble–bubble interaction 86
Bibliography 87

7 Coarsening 88
7.1 Expected scaling behaviour 88
7.2 Von Neumann's law 91
7.3 Observed scaling behaviour 92
7.4 Transients 95
7.5 Coarsening in wet foams 97
7.6 Three-dimensional cell statistics 98
7.7 Coarsening theory 98

7.8 Coarsening in mixed gas foams 100
Bibliography 101

8 Rheology 102
8.1 Foam as soft matter 102
8.2 Different types of shear 105
8.3 The dry foam limit 105
8.4 The plastic regime 107
8.5 Wet foam 108
8.6 The wet limit 108
8.7 Avalanches 109
8.8 Rheological measurement 112
8.9 Elastic moduli from cyclic strain experiments 112
8.10 Creep 113
8.11 Strain-rate dependent effects 114
8.11.1 Behaviour at very slow rates of shear 115
8.11.2 The quasi-static regime 116
Bibliography 116

9 Electrical conduction in a foam 117
9.1 Model for electrical conduction 117
9.2 The role of the films 120
9.3 The uses of conductivity 120

10 Equilibrium under gravity 121
10.1 The vertical density profile 121
10.2 Bubble size sorting under gravity 123

11 Drainage 126
11.1 Uniform drainage 126
11.1.1 Poiseuille flow? 126
11.1.2 Gravity driven flow in a Plateau border 127
11.1.3 The analogy between foam drainage and electrical conductance 128
11.1.4 Useful formulae for foam drainage 129
11.2 The solitary wave in forced drainage 131
11.3 The foam drainage equation 132
11.4 Free drainage 135
11.5 Quantitative predictions 136
11.6 The limitations of the drainage equation 137
11.7 Junction-limited drainage 138
11.8 Instability of steady drainage 138
11.9 Experimental determination of drainage profiles 139
Bibliography 143

12 Foam collapse 144
12.1 Surface tension and film stability 144

12.2 Forces in thin films 145
12.3 Film thinning 147
12.4 Film stability and rupture 149
12.5 Antifoams 149
Bibliography 150

13 Ordered foams 151
13.1 Order versus disorder 151
13.2 Two-dimensional ordered foam 151
13.3 The surface of three-dimensional monodisperse foams 152
13.4 Ordered three-dimensional foam: the Kelvin problem 153
13.5 The new ideal structure for monodisperse dry foam 158
13.6 Experimental observation 160
13.7 Related ordered structures 160
13.8 Wet monodisperse foam 162
13.9 Surface cells and slab structures 163
13.10 The honey bee's dilemma 166
13.11 Cylindrical foam 169
13.12 Fractal foam 173
Bibliography 173

14 Some applications of liquid foams 175
14.1 Beer and champagne 175
14.2 Food foams 176
14.3 Foam fractionation 176
14.4 Flotation 176
14.5 Fire-fighting foams 177
14.6 Foams in enhanced oil recovery 178
Bibliography 178

15 Some analogous physical systems 179
15.1 Foams large and small 179
15.2 Grain growth 179
15.3 Emulsions 181
15.4 Two-dimensional magnetic froth 185
15.5 Langmuir monolayers 188
15.6 Antibubbles 189
Bibliography 190

16 Solid foams 192
16.1 Light and versatile materials 192
16.2 Solid foam formation 194
16.3 Mechanical properties 195
16.4 A two-dimensional model for simulation 196
16.5 Thermal conductivity 201
16.6 Non-uniform solid foams 202

16.7 Metal foams 202
Bibliography 207

17 Some natural foams 208
17.1 A storm at sea 208
17.2 Biological cells 209
17.3 Cork 209
17.4 Cuckoo spit 209
17.5 Cancellous bone 210
Bibliography 212

18 Envoi 213

Appendix 215

A The shape of single soap films and bubbles 215
A.1 Surface tension 215
A.2 The law of Laplace and Young 215
A.3 Curved surfaces 216
A.4 Soap films in wire frames 216
A.5 Minimal surfaces 216

B The theorem of Lamarle 218

C Bubble clusters 221

D The decoration theorem 223

E The conductivity formula of Lemlich 226

F The drainage equation 228
Bibliography 229

G Phyllotaxis 230
Bibliography 231

H Simulation of liquid foams 232
H.1 Two-dimensional dry foam 232
H.2 Two-dimensional wet foam 235
H.2.1 Representation of the foam network 235
H.2.2 Equilibrium of the system 236
H.2.3 Generating and modifying the simulated foam 237
H.2.4 Detecting foam break-up in the wet limit 238
H.3 Simulating three-dimensional foam: the Surface Evolver 238
Bibliography 239

I Simulation of two-dimensional solid foams 240

Index 243
