

CONTENTS

Dedication and Preface	xvii
Chapter Zero: Introduction	1
What this book is about	1
What this book is not about	2
How this book is organized	3
How to use this book	3
Chapter One: A Crash Course On Car Crash	5
What is a typical crash?	5
The frontal barrier crash	6
The time epoch	6
Velocity change (Δv), acceleration and crush	7
What happens to the unrestrained driver and the right front seat occupant?	10
An unrestrained dummy driver's kinematics, in slow motion	13
A restrained dummy driver's kinematics, in slow motion	15
The right front seat passenger, unrestrained and restrained, in slow motion	16
Bibliography	18
Chapter Two: Vehicles, Victims and Velocities	19
The Vehicle	19
General comments and concepts	19
Crashworthiness	21
Crash energy management	21
Car size	22

Occupant volume (flail space)	24
Human factors	28
Summary	29
The Victim	29
Age	33
Sex	33
Habitus	36
Summary	37
The Velocity	39
Bibliography	41
Chapter Three: How We Break And Tear The Stuff We Are Made Of (i.e. Biomechanics Revisited)	45
General	45
What are we made of?	46
How we keep from coming apart	47
Forces that try to tear us apart	51
Some tissues and their mechanical tolerances	56
Human tolerance to injury: (or, the great biomechanics illusion)	59
Summary	61
Bibliography	62
Chapter Four: Wherein We Define, Describe And Damage Muscles, Bones and Joints	63
General	63
The skeleton	69
Muscles and tendons	72
Joints	72
Ligaments	73
A closer look at bones	73

How to wreak musculoskeletal havoc	75
Wrecking bones	75
Some different fractures	76
Wrecking joints	76
Patterns of skeletal crash injuries	77
Summary	81
Bibliography	83
Chapter Five: Crash Injuries Of The Extremities	85
General	85
Crash injuries of the lower extremities	87
The distribution of lower limb injuries	87
The foot and ankle	88
The leg (tibia and fibula)	97
The knee	101
The femur	103
Pelvic ring fractures	106
Acetabular fractures	110
Crash injuries of the upper extremities	110
Summary	112
Bibliography	113
Chapter Six: Crash Injuries Of The Abdomen	115
What exactly is an abdomen?	115
Why we say “abdominal cavity” when we really mean “peritoneal cavity”	117
Contents of the abdominal/peritoneal cavity	118
The incidence of blunt abdominal trauma in vehicular crash	119
Blunt abdominal trauma in unrestrained car occupants	120
Blunt abdominal trauma in restrained car occupants	120
Mechanisms of non-penetrating intra-abdominal injuries	121

Pascal's Principle	123
Compression and shear	123
Summary	124
Bibliography	126
Chapter Seven: Crash Injuries Of The Chest	129
General	129
The chest (thorax)	131
Thoracic injuries caused by blunt trauma	133
Blunt injuries of the thoracic respiratory apparatus	133
Blunt injuries of the thoracic circulatory apparatus	135
Cardiopulmonary injuries in restrained and unrestrained car occupants: is there a difference?	137
Summary	138
Bibliography	139
Chapter Eight: Crash Injuries Of The Head, Its Face, And The Brain Within	141
General	141
The skull and face	144
Skull fractures	148
Facial bone fractures	149
The organs of smell, taste, sight, sound and balance	151
Smell and taste	151
Sight	152
Hearing and balance	153
The cranial nerves	154
The brain	158
Categories of head injury	159
Contact injuries of the head	159
Non-contact or acceleration injuries of the head	160

The evaluation of brain injury and the prediction of future disability	163
Summary	164
Bibliography	166
Chapter Nine: The Spine	169
General	169
The importance and vulnerability of the spine	169
An overview of the anatomy of the spine	171
The intervertebral discs	179
Aging and the spine, or what is a normal spine?	181
Degenerative disease of the spine	182
Disc degeneration	182
The natural history of herniation of the intervertebral disc	183
Segmental narrowing	184
Segmental instability	184
Segmental hyperextension	184
Clinical manifestations	185
Spinal trauma	185
Mechanisms of musculoskeletal injuries of the vertebral column	187
General	187
Fractures, dislocations and stability of the musculoskeletal spine	188
Injuries of the upper cervical spine (C1, C2)	188
Injuries of the lower cervical spine (C3-C7)	194
Crash injuries involving the thoracic vertebrae	196
Lower thoracic and lumbar fractures and fracture-dislocations	197
Lap belt induced fractures and fracture dislocations	198
Spondylolysis and spondylolisthesis	200
Sacral and coccygeal fractures	201

Injuries of the spinal cord	201
General	201
Anatomy of the spinal cord	203
Spinal cord trauma	205
Summary	207
Bibliography	208
Chapter Ten: Seat Belts And Other Restraints: What They Can Do; What They Cannot Do; How They Can Help and How They Can Hurt	211
The problem is . . .	211
General	212
Restraint system components	216
Infant and child restraints	217
Restraints for children over age four: an apparently expendable group	219
Seat belt slack and the “comfort and convenience feature”	220
Automatic restraints and air bags	221
Seat belt injuries	222
Bibliography	225
Chapter Eleven: Injury Measurement Scales	229
Introduction	229
The Abbreviated Injury Scale (AIS)	231
The Injury Severity Score (ISS)	233
Injury cost scales and disability scales	234
Putting it all together, or, what happens when we rub injury scales against each other?	237
Bibliography	240

Chapter Twelve: Patterns Of Injury In Frontal, Lateral, Rear, And Rollover Crashes	241
Introduction	241
General	241
Frontal impacts	243
The driver and right front passenger	244
Rear seat occupant injury patterns in frontal crashes	248
Lateral (side) impacts	249
Lateral collision injury patterns	251
Rear collisions	253
Whiplash, cervical sprains, strains and other soft tissue neck injuries	256
Rollover and ejection	257
Rollover	257
Ejection	259
Summary	260
Bibliography	261
