<i>Preface</i>	<i>xix</i>
CHAPTER 1 Advances in Fiber Distributed-Feedback Lasers.....	1
<i>Michalis N. Zervas</i>	
1.1 Introduction.....	1
1.2 Fiber DFB lasers	2
1.2.1 Introduction.....	2
1.2.2 Fiber π -phase-shifted DFB lasers	3
1.2.3 Optical performance of fiber DFB lasers.....	11
1.2.4 Multi-wavelength fiber DFB lasers and fiber DFB laser arrays	17
1.2.5 Optical transmission system experiments.....	18
1.2.6 Fiber DFB laser in non-telecom applications	19
1.3 Summary and concluding remarks—outlook	19
References	20
CHAPTER 2 Semiconductor Photonic Integrated Circuit Transmitters and Receivers	25
<i>Radhakrishnan Nagarajan, Christopher Doerr, and Fred Kish</i>	
2.1 Introduction.....	25
2.2 Technology.....	27
2.2.1 Group III–V PICs	27
2.2.2 Group IV PICs	33
2.2.3 Hybrid integration of groups III–V and IV.....	37
2.2.4 Comparison of PIC technologies	38
2.3 Devices based on on-off keying (OOK)	40
2.3.1 Group III–V PICs for OOK transmission.....	40
2.3.2 Group IV PICs for OOK transmission.....	50
2.4 PICs based on advanced modulation formats	54
2.4.1 Introduction.....	54
2.4.2 Group III–V PICs for advanced modulation format transmission	62
2.4.3 Group IV PICs for advanced modulation format transmission	78
2.4.4 Space-division multiplexing PICs	81
2.5 Future trends	84
References	88

CHAPTER 3	Advances in Photodetectors and Optical Receivers.....	99
	<i>Andreas Beling and Joe C. Campbell</i>	
3.1	Introduction.....	99
3.2	High-speed waveguide photodiodes	103
3.2.1	Side-illuminated and evanescently-coupled waveguide photodiodes.....	103
3.2.2	Distributed and traveling-wave photodetectors	105
3.3	High-power photodiodes.....	107
3.3.1	Normal-incidence uni-traveling-carrier photodiodes.....	109
3.3.2	High-power WG photodiodes	114
3.3.3	High-linearity photodiodes	116
3.3.4	High-power balanced detectors	119
3.3.5	Photodetector arrays	119
3.4	Long-wavelength photodiodes on silicon	121
3.4.1	High-speed Ge photodiodes.....	121
3.4.2	Heterogeneously integrated III–V photodiodes on Si.....	124
3.5	APDs.....	126
3.5.1	SACM APDs.....	127
3.5.2	Low-noise APDs.....	128
3.5.3	Single photon APDs.....	134
3.6	Conclusion	138
	References	138
CHAPTER 4	Fundamentals of Photonic Crystals for Telecom Applications—Photonic Crystal Lasers	155
	<i>Susumu Noda</i>	
4.1	Introduction.....	155
4.2	Ultimate nanolasers	156
4.2.1	Toward realizing ultimate nanolasers	156
4.2.2	Quantum anti-zeno effect in a nanocavity and quantum dot system	158
4.3	Broad-area coherent lasers.....	161
4.3.1	Broad-area coherent operation.....	162
4.3.2	Beam pattern control by designing lattice points	163
4.3.3	Extension to the blue-violet region.....	167
4.3.4	Realization of beam steering functionality	168
4.4	Conclusion	171
	References	172

CHAPTER 5	High-Speed Polymer Optical Modulators	175
	<i>Raluca Dinu, Eric Miller, Guomin Yu, Baoquan Chen, Annabelle Scarpaci, Hui Chen, and Corey Pilgrim</i>	
5.1	Introduction.....	175
5.1.1	The advantages of EO polymer.....	175
5.1.2	Requirements for commercial applications	175
5.2	Material design	176
5.2.1	Design and development of EO polymer.....	177
5.2.2	Current status of commercial technologies.....	180
5.3	EO Material characterization	180
5.3.1	Characterization methods for electro-optical polymer material.....	180
5.4	Fundamental EO performance characterization	181
5.4.1	Electrical properties	181
5.4.2	Optical properties.....	181
5.4.3	Electro-optical properties.....	182
5.4.4	Measurement results from prototype materials	183
5.5	Device design.....	184
5.5.1	Zero chirp single-ended EO modulators.....	184
5.6	Wafer fabrication	196
5.6.1	EO polymer processing fundamentals	197
5.6.2	Waveguide fabrication	198
5.6.3	Poling.....	198
5.6.4	Side mode blocking structure	199
5.6.5	RF electrode fabrication.....	199
5.6.6	Velocity match	200
5.6.7	Dicing	200
5.7	Conclusion	201
	References	201
CHAPTER 6	Nanophotonics for Low-Power Switches.....	205
	<i>Lars Thylen, Petter Holmström, Lech Wosinski, Bozena Jaskorzynska, Makoto Naruse, Tadashi Kawazoe, Motoichi Ohtsu, Min Yan, Marco Fiorentino, and Urban Westergren</i>	
6.1	Introduction.....	205
6.2	Existing and emerging materials.....	207
6.3	Switches.....	209
6.3.1	Electronically controlled switches.....	209
6.3.2	Some examples of electronically controlled switches.....	211
6.3.3	All-optical switches	223

6.4 Summary and conclusions	232
References	236
CHAPTER 7 Fibers for Short-Distance Applications	243
<i>John Abbott, Scott Bickham, Paulo Dainese, and Ming-Jun Li</i>	
7.1 Introduction.....	243
7.2 Theory of light propagation in multimode fibers.....	246
7.3 Characterization of MM fiber and sources for high data rate applications	248
7.3.1 Bandwidth.....	248
7.3.2 Fiber characterization: HRDMD	250
7.3.3 Source characterization (encircled flux)	251
7.3.4 EMBc metric.....	253
7.4 System models and measurements for 1 Gb and 10 Gb Ethernet	255
7.5 Bend-insensitive MM fiber	256
7.6 Current and future directions for optical fibers for Short-reach applications.....	263
7.6.1 Consumer applications and very short-distance networks.....	263
7.6.2 Multimode fibers for high-performance computing (HPC).....	268
7.6.3 Multicore fiber for optical interconnect.....	270
Appendix A	275
References	276

CHAPTER 8 Few-Mode Fiber Technology for Spatial Multiplexing.....	283
<i>David W. Peckham, Yi Sun, Alan McCurdy, and Robert Lingle Jr.</i>	
8.1 Motivation.....	283
8.1.1 Background.....	283
8.1.2 Modern few-mode fiber design objectives.....	284
8.2 Modal structure of fiber designs	285
8.2.1 Linearly polarized modes	285
8.2.2 Distributed mode coupling.....	287
8.2.3 Differential group delay (DGD)	288
8.2.4 Accumulation of DGD with propagation distance.....	290
8.2.5 Non step-index fibers.....	290

8.2.6 Few-mode fiber requirements revisited	292
8.2.7 Impact of discrete mode coupling.....	293
8.2.8 How many modes can a FMF support?	294
8.3 Fiber designs optimized for few-mode transmission.....	295
8.3.1 Early dual-mode optical fiber design.....	295
8.3.2 Step-index style FMF for SDM	296
8.3.3 Variations on step-index fiber designs	297
8.3.4 Two-mode GRIN FMF for SDM	300
8.3.5 GRIN two-mode fiber example 1.....	301
8.3.6 GRIN two-mode fiber example 2.....	303
8.3.7 Extension to higher number of modes	304
8.3.8 How many modes can a FMF support? (Revisited).....	305
8.3.9 Supermode fiber concept	306
8.4 Measurement of few-mode fiber.....	309
8.4.1 Differential group delay (DGD)	309
8.4.2 Time of flight (impulse response) measurements	310
8.4.3 Spatially integrated interferometric measurements	310
8.4.4 Spatially resolved interferometric measurements (S^2).....	312
8.4.5 Differential mode attenuation (DMA)	314
8.4.6 Mode coupling.....	315
8.5 Future perspective.....	315
References	316

CHAPTER 9 Multi-Core Optical Fibers	321
<i>Tetsuya Hayashi</i>	
9.1 Introduction.....	321
9.2 Inter-core crosstalk	322
9.2.1 Coupled-mode equation with perturbed propagation constants and inter-core crosstalk in multi-core fiber.....	323
9.2.2 Redefinition of mode coupling coefficient	327
9.2.3 General expression of the power coupling coefficient under random perturbations.....	327
9.2.4 Effects of bend and twist	329
9.2.5 Effects of the random structural fluctuations.....	330
9.2.6 Average crosstalk under gradual and random fiber rotation.....	332
9.2.7 Statistical distribution of the crosstalk.....	333
9.2.8 Crosstalk suppression	336
9.2.9 Target level of crosstalk suppression	340
9.3 Cutoff wavelength variation due to effects of surrounding cores.....	340

9.4	Efficient utilization of fiber cross-sectional area	341
9.4.1	Outer cladding thickness and excess loss in outer cores ...	341
9.4.2	Cladding diameter and mechanical reliability	343
9.4.3	Core arrangement.....	343
9.5	Conclusion	345
	References	348
CHAPTER 10 Plastic Optical Fibers and Gb/s Data Links		353
<i>Yasuhiro Koike and Roberto Gaudino</i>		
10.1	Introduction.....	353
10.2	Structure and fabrication of plastic optical fiber.....	354
10.2.1	Step index plastic optical fiber.....	355
10.2.2	Graded index plastic optical fiber	356
10.3	Attenuation of plastic optical fiber	357
10.3.1	Absorption loss	358
10.3.2	Scattering loss	360
10.3.3	Low loss plastic optical fiber	361
10.4	Bandwidth of plastic optical fiber.....	362
10.4.1	Intermodal dispersion	363
10.4.2	Intramodal dispersion	365
10.4.3	High bandwidth plastic optical fiber.....	365
10.5	Application and future prospect of plastic optical fiber.....	369
10.5.1	Step index large-core plastic optical fiber.....	369
10.5.2	Graded index plastic optical fiber	372
	References	373
CHAPTER 11 Integrated and Hybrid Photonics for High-Performance Interconnects		377
<i>Nikos Bamiedakis, Kevin A. Williams, Richard V. Penty, and Ian H. White</i>		
11.1	Introduction.....	377
11.1.1	Short-reach optical interconnects	378
11.1.2	Bandwidth, connectivity, and latency	381
11.1.3	Energy and power	382
11.1.4	Cost and integration	384
11.2	Components	386
11.2.1	Waveguides	386
11.2.2	Multimode components	386
11.2.3	Single-mode components.....	389
11.3	Architectures.....	393
11.3.1	Point-to-point on-board optical links.....	394

11.3.2	Shuffle networks	398
11.3.3	Optical buses.....	399
11.3.4	Optical switch architectures.....	402
11.4	Outlook	407
	References	408

CHAPTER 12 CMOS Photonics for High Performance Interconnects

Jason Orcutt, Rajeev Ram, and Vladimir Stojanović

12.1	On-chip interconnects and power—A system architect's view	419
12.1.1	The evolution of microprocessor architecture	419
12.1.2	Future scaling of electrical core-to-memory links	422
12.1.3	On-chip electrical interconnects	426
12.2	Photonic network architecture	426
12.2.1	Optical link design and components development	427
12.2.2	Wavelength division multiplexing	429
12.2.3	Channel locking and thermal stabilization	433
12.2.4	Modulators.....	435
12.2.5	Detectors	438
12.2.6	On-chip electrical link energy.....	440
12.2.7	Link integration considerations	441
12.2.8	Optical loss budget.....	443
12.2.9	Optical power supply	446
12.3	Future core-to-DRAM photonic networks.....	448
12.3.1	Memory module architecture.....	448
12.3.2	Wavelength-routed architecture	449
12.3.3	Survey of current and future architecture work	451
	References	454

CHAPTER 13 Hybrid Silicon Lasers.....

Brian R. Koch, Sudharsanan Srinivasan, and John E. Bowers

13.1	Introduction to hybrid silicon lasers	461
13.2	Design of hybrid silicon lasers	462
13.2.1	Hybrid modes.....	462
13.2.2	Current confinement and flow.....	464
13.2.3	Hybrid laser tapers.....	465
13.2.4	Other important concepts.....	467
13.3	Wafer bonding techniques and fabrication	468
13.3.1	Direct wafer bonding	468

- 13.3.2 Adhesive bonding..... 470
- 13.3.3 Fabrication 473
- 13.4 Experimental results 474
 - 13.4.1 Fabry-Perot lasers 474
 - 13.4.2 Ring lasers 477
 - 13.4.3 DBR lasers 478
 - 13.4.4 DFB lasers 482
 - 13.4.5 Microring and microdisk lasers 486
- 13.5 Reliability 488
- 13.6 Specialized hybrid lasers and system demonstrations 490
- 13.7 Conclusions..... 494
- References 495

CHAPTER 14 VCSEL-Based Data Links 501

Julie Sheridan Eng and Chris Kocot

- 14.1 Introduction..... 501
- 14.2 850 nm VCSELs..... 506
 - 14.2.1 Basics of VCSEL operation 508
 - 14.2.2 VCSEL detailed design..... 510
 - 14.2.3 14 Gb/s reliability..... 515
 - 14.2.4 28 Gb/s VCSEL design 515
 - 14.2.5 28 G VCSEL reliability..... 520
- 14.3 Long wavelength VCSELs (1.3–1.6 μM)..... 522
 - 14.3.1 Transceivers with 1.3 μm VCSELs..... 523
 - 14.3.2 1550 nm long-wavelength VCSELs 526
 - 14.3.3 Distributed Bragg reflector lasers 528
- 14.4 Data rates >28 Gb/s 529
 - 14.4.1 Electrooptical modulation 529
 - 14.4.2 Optical injection locking..... 532
 - 14.4.3 Advanced modulation with VCSELs 533
- 14.5 Optical interconnect technology 538
- 14.6 Comparison of VCSELs and silicon photonics 543
- 14.7 Conclusions..... 548
- References 548

CHAPTER 15 Implementation Aspects of Coherent Transmit and Receive Functions in Application-Specific Integrated Circuits..... 555

Andreas Leven and Laurent Schmalen

- 15.1 Introduction..... 555

- 15.2 ASIC design options and limitations 557
- 15.3 High-speed data converters..... 558
 - 15.3.1 ADC architectures..... 558
- 15.4 Implementation of signal processing algorithms at high speed 560
 - 15.4.1 Quadrature imbalance compensation..... 561
 - 15.4.2 Chromatic dispersion compensation..... 563
 - 15.4.3 Polarization tracking 564
- 15.5 Soft-FEC implementation at data rates of 100 G or higher 565
 - 15.5.1 Soft-decision decoding in optical communications..... 566
 - 15.5.2 Low-density parity-check (LDPC) codes 568
 - 15.5.3 Decoding of LDPC codes 570
 - 15.5.4 Quasi-cyclic LDPC codes..... 573
 - 15.5.5 Efficient encoding of quasi-cyclic LDPC codes 576
- 15.6 Performance evaluation of different coding concepts..... 581
- 15.7 Conclusion 585
- References 585

CHAPTER 16 All-Optical Regeneration of Phase Encoded Signals..... 589

Joseph Kakande, Radan Slavík, Francesca Parmigiani, Periklis Petropoulos, and David Richardson

PHASE SENSITIVE OPTICAL REGENERATION 589

- 16.1 Introduction..... 589
- 16.2 Approaches to regeneration of phase encoded signals 592
 - 16.2.1 Indirect PSK regeneration..... 592
 - 16.2.2 Direct phase regeneration 595
- 16.3 PSA-based phase regeneration..... 596
 - 16.3.1 Binary phase quantization theory 597
 - 16.3.2 Saturation of PSAs for amplitude noise suppression..... 601
- 16.4 Black-box PSA-based BPSK regeneration 603
 - 16.4.1 Phase locking of pumps and signal..... 603
 - 16.4.2 Noise suppression capability of the black-box regenerator 605
 - 16.4.3 Field results with DWDM network-generated noise 608
 - 16.4.4 Analog error correction in PSA regenerators..... 609
- 16.5 MPSK phase regeneration 610
 - 16.5.1 PSA-based multilevel phase regeneration 611
 - 16.5.2 Other approaches to QPSK regeneration 619
 - 16.5.3 Flexible MPSK quantization..... 621

16.6 Choice of nonlinear materials and designs for all-optical signal processing..... 624
 16.6.1 Third-order nonlinearity systems..... 625
 16.6.2 Quadratic nonlinearity systems..... 627
 16.6.3 Semiconductor optical amplifiers 628
16.7 Future trends and research directions 629
 16.7.1 Multiwavelength regeneration 629
 16.7.2 Regeneration of other advanced modulation formats 630
16.8 Conclusions..... 631
 References 632

CHAPTER 17 Ultra-High-Speed Optical Time Division Multiplexing..... 641

Leif Katsuo Oxenløwe, Anders Clausen, Michael Galili, Hans Christian Hansen Mulvad, Hua Ji, Hao Hu, and Evarist Palushani

17.1 Background..... 641
 17.1.1 Ultra-fast nonlinear switching elements and materials.... 642
17.2 The basic OTDM system and its constituent parts 643
 17.2.1 Essential functionalities for point-to-point..... 645
 17.2.2 Advanced network functionalities 654
 17.2.3 Impairment-tolerant switches 661
 17.2.4 Processing of all bits in one device—conversion-type functionalities 665
 17.2.5 Transmission..... 677
17.3 Silicon photonics and ultra-fast optical signal processing..... 685
 17.3.1 Silicon photonics for ultra-fast optical signal processing 686
 17.3.2 Demonstrations of silicon-based optical signal processing of OTDM signals 689
17.4 Energy perspectives and potential applications 693
17.5 Summary..... 695
 References 696

CHAPTER 18 Technology and Applications of Liquid Crystal on Silicon (LCoS) in Telecommunications 709

Stephen Frisken, Ian Clarke, and Simon Poole

18.1 Introduction..... 709
18.2 ROADMs and reconfigurable optical networks..... 709

18.3 Background and technology of LCoS..... 713
 18.3.1 Untwisted nematic liquid crystal cells (Fréedericksz cells)..... 714
 18.3.2 Cell construction..... 715
 18.3.3 Driving a cell 715
 18.3.4 Spatial light modulators..... 716
 18.3.5 Holographic fourier processing 717
 18.3.6 Holographic beam steering 717
 18.3.7 Comparison with other switching technologies..... 718
18.4 LCoS-based wavelength-selective switching..... 721
 18.4.1 Switching between ports..... 722
 18.4.2 Optical power control 724
 18.4.3 Spectral resolution 725
 18.4.4 Polarization-independent operation 726
 18.4.5 Port isolation and extinction 727
 18.4.6 Phase response 728
 18.4.7 Switching time 728
 18.4.8 Device specification calibration and characterization 729
18.5 Future networks 729
 18.5.1 Overcoming capacity constraints..... 729
 18.5.2 Beyond the ITU grid..... 730
 18.5.3 Elastic networks..... 732
 18.5.4 Colorless, directionless, contentionless ROADMs 733
18.6 Emerging applications of LCoS..... 735
 18.6.1 Fourier domain pulse shaping and generation 735
 18.6.2 Microwave signal processing..... 736
 18.6.3 Phase-sensitive amplification..... 736
 18.6.4 Programmable interferometer..... 737
 18.6.5 Advanced SLMs..... 737
 18.6.6 Modal switching 737
 18.6.7 Tunable lasers 738
 18.6.8 Programmable high resolution..... 738
 18.6.9 Other applications 738
 References 739

Index..... 743
