CHAPTER 1 Fiber Nonlinearity and Capacity: Single-Mode and Multimode Fibers 1

René-Jean Essiambre, Robert W. Tkach, and Roland Ryf

1.1	Introduction.....	1
1.2	Network traffic and optical systems capacity	2
1.3	Information theory	5
	1.3.1 Basic concepts	5
	1.3.2 Link to optical communication.....	8
1.4	Single-mode fibers: single polarization	9
	1.4.1 Stochastic nonlinear Schrödinger equation	9
	1.4.2 Nonlinear capacity of standard single-mode fiber	10
	1.4.3 Advanced single-mode fibers.....	12
	1.4.4 Analytic formula of fiber capacity	15
1.5	Single-mode fibers: polarization-division multiplexing	17
	1.5.1 Nonlinear propagation: stochastic Manakov equations	17
	1.5.2 Capacity of PDM systems	18
1.6	Multicore and multimode fibers.....	19
	1.6.1 Types of multicore and multimode fibers	20
	1.6.2 Capacity scaling with the number of modes.....	21
	1.6.3 Generalized Manakov equations for multimode fibers.....	24
	1.6.4 Description of a few-mode fiber	27
	1.6.5 Inter-modal cross-phase modulation.....	31
	1.6.6 Inter-modal four-wave mixing	34
1.7	Conclusion	36
	References.....	37

CHAPTER 2 Commercial 100-Gbit/s Coherent Transmission Systems 45

Tiejun J. Xia and Glenn A. Wellbrock

2.1	Introduction.....	45
2.2	Optical channel designs	47
2.3	100G channel—from wish to reality	55
2.4	Introduction of 100g channels to service provider networks.....	60

2.5	Impact of commercial 100g system to transport network.....	63
2.6	Outlook beyond commercial 100g systems.....	68
2.7	Summary.....	74
	References.....	75

CHAPTER 3 Advances in Tb/s Superchannels 83

S. Chandrasekhar and Xiang Liu

3.1	Introduction.....	83
3.2	Superchannel principle.....	85
3.3	Modulation.....	87
3.4	Multiplexing.....	88
	3.4.1 Overview of multiplexing schemes.....	88
	3.4.2 Seamless multiplexing.....	89
	3.4.3 Multiplexing with guard band.....	93
3.5	Detection.....	97
3.6	Superchannel transmission.....	99
	3.6.1 Transmission based on single-carrier modulation and O-OFDM multiplexing.....	100
	3.6.2 Transmission based on OFDM modulation and O-OFDM multiplexing.....	101
	3.6.3 Transmission based on Nyquist-WDM.....	105
	3.6.4 Optimization of the spectral-efficiency- distance-product.....	106
3.7	Networking implications.....	109
3.8	Conclusion.....	112
	Glossary.....	113
	References.....	114

CHAPTER 4 Optical Satellite Communications 121

Hamid Hemmati and David Caplan

4.1	Introduction.....	121
	4.1.1 Reduced diffraction.....	121
	4.1.2 Available bandwidth.....	122
	4.1.3 Commercially available technologies.....	122
	4.1.4 Lasercom challenges.....	122
4.2	Lasercom link budgets.....	126
4.3	Laser beam propagation through the atmosphere.....	130
	4.3.1 Atmospheric attenuation.....	130
	4.3.2 Atmospheric radiance.....	130

	4.3.3 Atmospheric turbulence.....	131
	4.3.4 Turbulence mitigation approaches.....	133
4.4	Optical transceivers for space applications.....	134
	4.4.1 Overview of FSO modulation formats and sensitivities.....	135
	4.4.2 Transmitter technologies.....	139
	4.4.3 Receiver technologies and performance.....	142
4.5	Space terminal.....	145
	4.5.1 Space environment.....	145
	4.5.2 Pointing, acquisition, and tracking.....	147
	4.5.3 Flight optomechanics assembly.....	149
4.6	Ground terminal.....	150
	4.6.1 Ground terminal—telescope and optomechanics assembly.....	150
	4.6.2 Ground terminal—uplink transmitter.....	152
	4.6.3 Ground terminal—acquisition, pointing, and tracking assembly.....	154
4.7	List of acronyms.....	155
	References.....	156

CHAPTER 5 Digital Signal Processing (DSP) and Its Application in Optical Communication Systems 163

Polina Bayvel, Carsten Behreys, and David S. Millar

5.1	Introduction.....	163
	5.1.1 Maximizing capacity in optical transport networks.....	163
5.2	Digital signal processing and its functional blocks.....	167
	5.2.1 Optical coherent receiver and digital signal processing functionality.....	167
5.3	Application of DBP-based DSP to optical fiber Transmission in the nonlinear regime.....	181
	5.3.1 Nonlinearity compensation in optical communications.....	181
	5.3.2 Single-channel optical transmission performance.....	182
	5.3.3 Single-channel digital backpropagation.....	191
	5.3.4 WDM transmission.....	196
	5.3.5 Digital backpropagation of the central channel.....	201
	5.3.6 Multi-channel digital backpropagation.....	206
5.4	Summary and future questions.....	211
	References.....	213

CHAPTER 6 Advanced Coding for Optical Communications..... 221

Ivan B. Djordjevic

6.1	Introduction.....	221
6.2	Linear block codes.....	223
	6.2.1 Generator matrix.....	225
	6.2.2 Parity-check matrix.....	227
	6.2.3 Coding gain.....	228
6.3	Codes on graphs.....	229
	6.3.1 Turbo codes.....	229
	6.3.2 Turbo-product codes (TPCs).....	232
	6.3.3 Low-density parity-check (LDPC) codes.....	234
	6.3.4 Quasi-cyclic (QC) binary LDPC code design.....	235
	6.3.5 Decoding of binary LDPC codes and BER performance evaluation.....	237
	6.3.6 Nonbinary LDPC codes.....	242
	6.3.7 FPGA implementation of decoders for large-girth QC-LDPC codes.....	244
6.4	Coded modulation.....	246
	6.4.1 Multilevel coding and block-interleaved coded modulation.....	246
	6.4.2 Polarization-multiplexed coded-OFDM.....	249
	6.4.3 Nonbinary LDPC-coded modulation.....	253
	6.4.4 Multidimensional coded modulation.....	257
6.5	Adaptive nonbinary LDPC-coded modulation.....	261
6.6	LDPC-coded turbo equalization.....	262
	6.6.1 MAP detection.....	262
	6.6.2 Multilevel turbo equalization.....	264
	6.6.3 Performance of LDPC-coded turbo equalizer.....	268
	6.6.4 Multilevel turbo equalizer robust to I/Q -imbalance and polarization offset.....	272
	6.6.5 Multilevel turbo equalization with digital backpropagation.....	276
6.7	Information capacity of fiber-optics communication systems.....	279
	6.7.1 Channel capacity of channels with memory.....	279
	6.7.2 Calculation of information capacity of multilevel modulation schemes by forward recursion of BCJR algorithm.....	281
	6.7.3 Information capacity of systems with coherent detection.....	283
6.8	Concluding remarks.....	286
	References.....	288

CHAPTER 7 Extremely Higher-Order Modulation Formats..... 297

*Masataka Nakazawa, Toshihiko Hirooka, Masato Yoshida,
and Keisuke Kasai*

7.1	Introduction.....	297
7.2	Spectral efficiency of QAM signal and shannon limit.....	299
7.3	Fundamental configuration and key components of QAM coherent optical transmission.....	302
	7.3.1 Coherent light source.....	303
	7.3.2 Optical IQ modulator.....	306
	7.3.3 Coherent optical receiver and optical PLL.....	307
	7.3.4 Digital demodulator and equalizer.....	311
7.4	Higher-order QAM transmission experiments.....	315
	7.4.1 1024 QAM (60 Gbit/s) single-carrier transmission.....	315
	7.4.2 256 QAM-OFDM coherent transmission.....	320
	7.4.3 Ultrahigh-speed OTDM-RZ/QAM transmission.....	326
7.5	Conclusion.....	331
	References.....	332

CHAPTER 8 Multicarrier Optical Transmission..... 337

Xi Chen, Abdullah Al Amin, An Li, and William Shieh

8.1	Historical perspective of optical multicarrier transmission.....	337
	8.1.1 Variations of optical multicarrier transmission methods.....	338
	8.1.2 Research trends in optical multicarrier transmission.....	339
8.2	OFDM basics.....	339
	8.2.1 Mathematical formulation of an OFDM signal.....	340
	8.2.2 Discrete Fourier transform implementation of OFDM.....	341
	8.2.3 Cyclic prefix for OFDM.....	343
	8.2.4 Spectral efficiency for optical OFDM.....	345
8.3	Optical multicarrier systems based on electronic FFT.....	347
	8.3.1 Coherent optical OFDM.....	347
	8.3.2 Direct-detection optical OFDM.....	350
8.4	Optical multicarrier systems based on optical multiplexing.....	355
	8.4.1 All-optical OFDM.....	355
	8.4.2 Optical superchannel.....	356
	8.4.3 Optical frequency division multiplexing.....	357
8.5	Nonlinearity in optical multicarrier transmission.....	357
	8.5.1 High spectral-efficiency long-haul transmission.....	358
	8.5.2 Optimal symbol rate in multicarrier systems.....	359
	8.5.3 The information spectral limit in multicarrier systems.....	362
	8.5.4 Nonlinearity mitigation for multicarrier systems.....	366

8.6 Applications of optical multicarrier transmissions 368
 8.6.1 Long-reach and high-capacity systems 368
 8.6.2 Optical access networks 369
 8.6.3 Indoor and free-space multicarrier optical systems 370
 8.7 Future research directions for multicarrier transmission 371
 References 372

CHAPTER 9 Optical OFDM and Nyquist Multiplexing..... 381

Juerg Leuthold and Wolfgang Freude

9.1 Introduction 381
 9.2 Orthogonal shaping of temporal or spectral functions
 for efficient multiplexing 385
 9.2.1 Definitions of orthogonality 385
 9.2.2 Transmitter 388
 9.2.3 Channel 389
 9.2.4 Receiver 389
 9.2.5 Avoiding inter-channel and inter-symbol interference 390
 9.2.6 Pulse-shaping in the digital, electrical, and
 optical domain—a comparison 398
 9.3 Optical Fourier transform based multiplexing 400
 9.3.1 Electronic Fourier transform processing 402
 9.3.2 The optical Fourier transform receiver 403
 9.3.3 The optical Fourier transform transmitter 406
 9.3.4 Optical Fourier transform processors 406
 9.4 Encoding and decoding of OFDM signals 417
 9.4.1 OFDM transmitter 417
 9.4.2 OFDM receivers 420
 9.4.3 OFDM transmission—an example of an all-optical
 implementation 421
 9.5 Conclusion 424
 9.6 Mathematical definitions and relations 424
 References 427

**CHAPTER 10 Spatial Multiplexing Using Multiple-Input
 Multiple-Output Signal Processing..... 433**

Peter J. Winzer, Roland Ryf, and Sebastian Randel

10.1 Optical network capacity scaling through spatial
 multiplexing 433
 10.1.1 The capacity crunch 433
 10.1.2 Spatial multiplexing 436
 10.1.3 Crosstalk management in SDM systems 438

10.2 Coherent MIMO-SDM with selective mode excitation 440
 10.2.1 Signal orthogonality 440
 10.2.2 MIMO system capacities and outage 442
 10.3 MIMO DSP 451
 10.3.1 General receiver DSP functional blocks 452
 10.3.2 Channel estimation 453
 10.3.3 Adaptive MIMO equalization 455
 10.3.4 MIMO equalizer complexity 458
 10.4 Mode multiplexing components 461
 10.4.1 Mode multiplexer characteristics 461
 10.4.2 Mode multiplexer design 462
 10.4.3 Mode couplers for few-mode fibers 463
 10.4.4 Mode couplers for multi-core fibers 470
 10.5 Optical amplifiers for coupled-mode transmission 470
 10.5.1 Optical amplifiers for few-mode fibers 471
 10.5.2 Optical amplifier for multi-core fibers 474
 10.6 Systems experiments 474
 10.6.1 Single-span MIMO-SDM transmission over
 few-mode fiber 475
 10.6.2 Multi-span MIMO-SDM transmission over
 few-mode fiber 478
 10.6.3 MIMO-SDM in coupled multi-core fiber 480
 10.7 Conclusion 482
 References 483

**CHAPTER 11 Mode Coupling and its Impact on Spatially
 Multiplexed Systems..... 491**

Keang-Po Ho and Joseph M. Kahn

11.1 Introduction 491
 11.2 Modes and mode coupling in optical fibers 493
 11.2.1 Modes in optical fibers 493
 11.2.2 Mode coupling and its origins 495
 11.2.3 Mode coupling models 496
 11.3 Modal dispersion 504
 11.3.1 Coupled modal dispersion 504
 11.3.2 Group delay statistics in strong-coupling regime 507
 11.3.3 Statistics of group delay spread 516
 11.4 Mode-dependent loss and gain 520
 11.4.1 Statistics of strongly coupled mode-dependent
 gains and losses 521

- 11.4.2 Model for mode-dependent loss and gain..... 523
- 11.4.3 Properties of the product of random matrices..... 524
- 11.4.4 Numerical simulations of mode-dependent loss and gain 527
- 11.4.5 Spatial whiteness of received noise 530
- 11.4.6 Frequency-dependent mode-dependent loss and gain..... 533
- 11.5 Direct-detection mode-division multiplexing 537
- 11.6 Coherent mode-division multiplexing 539
 - 11.6.1 Average channel capacity of narrowband systems..... 540
 - 11.6.2 Wideband systems and frequency diversity 546
 - 11.6.3 Signal processing for mode-division-multiplexing..... 551
- 11.7 Conclusion 558
- References 559

CHAPTER 12 Multimode Communications Using Orbital Angular Momentum..... 569

Jian Wang, Miles J. Padgett, Siddharth Ramachandran, Martin P.J. Lavery, Hao Huang, Yang Yue, Yan Yan, Nenad Bozinovic, Steven E. Golowich, and Alan E. Willner

- 12.1 Perspective on orbital angular momentum (OAM) multiplexing in communication systems..... 569
- 12.2 Fundamentals of OAM 570
- 12.3 Techniques for OAM generation, multiplexing/demultiplexing, and detection..... 576
 - 12.3.1 OAM generation 576
 - 12.3.2 OAM multiplexing/demultiplexing 579
 - 12.3.3 OAM detection 583
- 12.4 Free-space communication links using OAM multiplexing 583
 - 12.4.1 OAM+WDM link..... 583
 - 12.4.2 OAM +PDM link 585
 - 12.4.3 Scalability of OAM+PDM in spatial domain 588
- 12.5 Fiber-based transmission links..... 590
 - 12.5.1 Fiber design 591
 - 12.5.2 Coupling and controlling OAM in fibers 595
 - 12.5.3 Long-length propagation of OAM in fiber..... 598
 - 12.5.4 Fiber-based data transmission using OAM..... 599
- 12.6 Optical signal processing using OAM 600
 - 12.6.1 Data exchange..... 600
 - 12.6.2 Add/drop 603

- 12.6.3 Multicasting 605
- 12.6.4 Monitoring and compensation 605
- 12.7 Future challenges of OAM communications 609
- References 610

CHAPTER 13 Transmission Systems Using Multicore Fibers 617

Yoshinari Awaji, Kunimasa Saitoh, and Shoichiro Matsuo

- 13.1 Expectations of multicore fibers 617
- 13.2 MCF design 618
 - 13.2.1 Types of MCFs..... 618
 - 13.2.2 Inter-core crosstalk in homogeneous uncoupled MCFs..... 619
 - 13.2.3 Inter-core crosstalk in heterogeneous uncoupled MCFs..... 623
- 13.3 Methods of coupling to MCFs..... 628
 - 13.3.1 Lens coupling systems 628
 - 13.3.2 Fiber-based systems and waveguide-based systems..... 630
 - 13.3.3 Splicing techniques 634
- 13.4 Transmission experiments with uncoupled cores 636
 - 13.4.1 Early demonstrations 636
 - 13.4.2 Scalability of core number..... 641
 - 13.4.3 1-R repeated demonstrations 642
- 13.5 Laguerre-Gaussian mode division multiplexing transmission in MCFs 644
- References 648

CHAPTER 14 Elastic Optical Networking 653

Ori Gerstel and Masahiko Jinno

- 14.1 Introduction..... 653
 - 14.1.1 The only constant in the future network is change 653
 - 14.1.2 Why “business as usual” is not an option for DWDM 654
- 14.2 Enabling technologies..... 658
 - 14.2.1 Flexible spectrum ROADMs 658
 - 14.2.2 Bitrate variable transceiver 659
 - 14.2.3 The extended role of network control systems 661
 - 14.2.4 EON trials and other proof points..... 664
- 14.3 The EON vision and some new concepts 665
 - 14.3.1 Flexible choice of EOP parameters 666
 - 14.3.2 Sliceable transceiver 667

14.3.3 Flexible client interconnect.....	669
14.3.4 Spectrum allocation and reallocation.....	669
14.3.5 Managing a connection per demand instead of managing wavelength.....	670
14.3.6 Adaptive restoration.....	671
14.4 A comparison of EON and fixed DWDM.....	672
14.4.1 A point-to-point comparison.....	672
14.4.2 A network level comparison.....	673
14.4.3 A comparison that includes the client network.....	675
14.5 Standards progress.....	677
14.5.1 DWDM network architecture.....	678
14.5.2 OTN mapping and multiplexing.....	678
14.5.3 Control plane: ASON, WSON, and GMPLS.....	678
14.5.4 Standardizing on flexible spectrum.....	680
14.6 Summary.....	680
References.....	681

CHAPTER 15 ROADM-Node Architectures for Reconfigurable Photonic Networks 683

*Sheryl L. Woodward, Mark D. Feuer, and
Paparao Palacharla*

Summary.....	683
15.1 Introduction.....	684
15.2 The ROADM node.....	686
15.2.1 Features—from necessities to luxuries.....	686
15.2.2 Evolution of the switching core.....	690
15.2.3 The mux/demux section of the ROADM node.....	692
15.2.4 Client-side switching.....	695
15.2.5 Flexible transponders.....	696
15.3 Network applications: Studies and demonstrations.....	697
15.3.1 CN-ROADMs and CNC-ROADMs in dynamic optical networks.....	698
15.3.2 Predeployment of regenerators for faster provisioning and lower MTTR.....	699
15.3.3 Wavelength grooming and traffic re-routing.....	700
15.3.4 Automated wavelength restoration.....	700
15.3.5 Bandwidth on demand.....	701
15.4 Two compatible visions of the future.....	701
15.4.1 Vision 1: highly dynamic network.....	701
15.4.2 Vision 2: space-division multiplexed systems.....	703
15.5 Conclusions.....	703
References.....	704

CHAPTER 16 Convergence of IP and Optical Networking..... 709

Kristin Rauschenbach and Cesar Santivanez

16.1 Introduction.....	709
16.2 Motivation.....	710
16.2.1 Network services.....	710
16.2.2 Network architectures.....	710
16.2.3 Network technologies.....	711
16.3 Background.....	712
16.3.1 Network stack.....	712
16.3.2 Management, control, and data planes.....	714
16.3.3 Control plane functions.....	716
16.3.4 Traffic management.....	717
16.3.5 Recovery.....	720
16.3.6 Multi-domain.....	723
16.4 Standards.....	726
16.5 Next-generation control and management.....	729
16.5.1 Drivers.....	729
16.5.2 Novel framework.....	729
16.5.3 Research extensions: highly heterogeneous networks.....	741
References.....	744

CHAPTER 17 Energy-Efficient Telecommunications..... 747

Daniel C. Kilper and Rodney S. Tucker

17.1 Introduction.....	747
17.2 Energy use in commercial optical communication systems.....	753
17.2.1 Long reach and core transmission systems.....	753
17.2.2 Access networks.....	756
17.2.3 Switching and routing equipments.....	758
17.2.4 Overhead energy and common equipment constraints.....	760
17.3 Energy in optical communication systems.....	761
17.4 Transmission and switching energy models.....	765
17.4.1 Transmission system energy model.....	765
17.4.2 Lower bound on energy consumption of optically amplified transport.....	766
17.4.3 Energy consumption in optical transmitters and receivers.....	769
17.4.4 Transmission system lower bounds.....	772
17.5 Network Energy Models.....	773
17.5.1 Network energy model.....	773
17.5.2 Switching devices and fabrics.....	775

17.5.3 Switching sub-system energy 781
 17.5.4 End-to-end network energy models 783
 17.5.5 Comparison of energy projections with
 network-based data 786
17.6 Conclusion 788
 References 788

**CHAPTER 18 Advancements in Metro Regional and Core
 Transport Network Architectures for the
 Next-Generation Internet..... 793**

Loukas Paraschis

18.1 Introduction..... 793
18.2 Network architecture evolution..... 794
18.3 Transport technology innovations..... 799
 18.3.1 IP/MPLS transport 800
 18.3.2 100 Gb/s interconnections and coherent DWDM
 transmission 801
 18.3.3 Optical transport networking (ITU G.709 standard) 802
 18.3.4 Fully flexible DWDM add-drop multiplexing
 and switching 803
 18.3.5 WSON and GMPLS control-plane
 advancements 803
**18.4 The network value of photonics technology
 innovation** 804
18.5 The network value of optical transport innovation 808
18.6 Outlook 813
18.7 Summary 815
 References 815

**CHAPTER 19 Novel Architectures for Streaming/Routing
 in Optical Networks 819**

Vincent W.S. Chan

**19.1 Introduction and historical perspectives on connection
 and connectionless oriented optical transports** 819
**19.2 Essence of the major types of optical transports:
 optical packet switching (OPS), optical burst switching
 (OBS), and optical flow switching (OFS)**..... 821
 19.2.1 A brief history of OFS 826
19.3 Network architecture description and layering..... 829
 19.3.1 The need for new architecture constructs for
 optical networks 829
 19.3.2 OFS architectural principles 830

**19.4 Definition of network “capacity” and evaluation of
 achievable network capacity regions of different
 types of optical transports** 832
**19.5 Physical topology of fiber plant and optical switching
 functions at nodes and the effects of transmission
 impairments and session dynamics on network
 architecture** 833
**19.6 Network management and control functions and
 scalable architectures** 838
**19.7 Media access control (MAC) protocol and implications
 on routing protocol efficiency and scalability**..... 840
19.8 Transport layer protocol for new optical transports..... 845
**19.9 Cost, power consumption throughput, and delay
 performance** 846
19.10 Summary 849
 References 851

**CHAPTER 20 Recent Advances in High-Frequency (>10GHz)
 Microwave Photonic Links 853**

Charles H. Cox, III and Edward I. Ackerman

20.1 Introduction..... 853
20.2 Photonic links for receive-only applications..... 854
 20.2.1 Effect of modulator bias point 860
 20.2.2 Effect of balanced photodetection 862
**20.3 Photonic links for transmit and receive
 applications** 863
 20.3.1 Broad bandwidth TIPRx 865
 20.3.2 High frequency TIPRx 867
20.4 Summary 870
 References 870

**CHAPTER 21 Advances in 1-100GHz Microwave Photonics:
 All-Band Optical Wireless Access Networks
 Using Radio Over Fiber Technologies 873**

Gee-Kung Chang, Yu-Ting Hsueh, and Shu-Hao Fan

21.1 Introduction..... 873
21.2 Optical RF wave generation..... 874
 21.2.1 Overview of optical RF signal generation 874
 21.2.2 Types of optical RF waves 875
 21.2.3 ODSB millimeter wave 875
 21.2.4 OSSB+C millimeter wave 876

21.2.5 OCS millimeter wave.....	877
21.2.6 Conversion efficiency	878
21.3 Converged ROF transmission system	880
21.3.1 Generation and transmission of multiple RF bands.....	880
21.3.2 Baseband, microwave, and millimeter wave.....	881
21.3.3 Millimeter wave with wireless services in low RF regions.....	884
21.3.4 60-GHz sub-bands generation	885
21.4 Conclusions.....	887
References.....	888

CHAPTER 22 PONs: State of the Art and Standardized 891

Frank Effenberger

22.1 Introduction to PON	891
22.2 TDM PONs: Basic design and issues	893
22.2.1 Brief review of TDM PON standards	897
22.2.2 Generation 4: 10 Gbit/s PONs.....	902
22.2.3 40G serial.....	906
22.3 Video overlay	907
22.4 WDM PONs: common elements	909
22.4.1 Injection locked	910
22.4.2 Wavelength reuse	911
22.4.3 Self-seeded.....	912
22.4.4 Tunable	913
22.4.5 Coherent.....	915
22.5 FDM-PONs: Motivation	916
22.5.1 Pure FDM	916
22.5.2 Incoherent OFDM.....	917
22.5.3 Optical OFDM.....	919
22.6 Hybrid TWDM-PON	920
22.7 Summary and outlook.....	922
References.....	923

CHAPTER 23 Wavelength-Division-Multiplexed Passive Optical Networks (WDM PONs) 927

Y.C. Chung and Y. Takushima

23.1 Introduction.....	927
23.2 Light sources for WDM PON.....	929
23.2.1 Distributed feedback (DFB) laser	929
23.2.2 Tunable laser	931
23.2.3 Spectrum-sliced incoherent light source.....	932

23.2.4 Reflective light sources	934
23.2.5 Re-modulation scheme for upstream transmission.....	936
23.3 WDM PON architectures.....	937
23.3.1 WDM PON in wavelength-routing architecture	938
23.3.2 WDM PON in broadcast-and-select architecture	940
23.3.3 WDM PON in ring/bus architectures.....	941
23.4 Long-reach WDM PONs	942
23.4.1 Fundamental limitations on the reach of WDM PON	942
23.4.2 Long-reach WDM PON using remote optical amplifiers	947
23.4.3 Long-reach WDM PON using coherent detection technique	949
23.5 Next-generation high-speed WDM PON.....	952
23.5.1 Limitation on the operating speed of colorless light sources	952
23.5.2 Modulation bandwidth of RSOA and its equalization technique	953
23.5.3 Utilization of advanced modulation formats	956
23.5.4 Ultrahigh-speed WDM PON	958
23.6 Fault monitoring, localization and protection techniques.....	959
23.6.1 Fault localization techniques for WDM PON.....	960
23.6.2 Survivable WDM PONs.....	963
23.7 Summary.....	968
Appendix: Acronyms	968
References.....	970

CHAPTER 24 FTTX Worldwide Deployment 985

*Vincent O'Byrne, Chang Hee Lee, Yoon Kim, and
Zisen Zhao*

24.1 Introduction.....	985
24.2 Background of fiber architectures.....	986
24.2.1 Passive optical networks (PONs).....	986
24.2.2 Point to point.....	988
24.3 Technology variants	989
24.3.1 B-PON	991
24.3.2 GE-PON.....	996
24.3.3 G-PON	999
24.3.4 Next-generation PON technologies	1003
24.3.5 Coexistence and wavelength plan.....	1013
24.3.6 Extended reach systems.....	1016
24.3.7 CO consolidation	1017

24.4 Status and FTTH deployments around the world 1018
 24.4.1 FTTH in Asia 1019
 24.4.2 FTTH in Europe and Africa 1024
 24.4.3 FTTH in the Americas 1028
 24.5 What's Next? 1035
 24.6 Summary 1037
 References 1037

CHAPTER 25 Modern Undersea Transmission Technology 1041

Jin-xing Cai, Katya Golovchenko, and Georg Mohs

25.1 Introduction 1041
 25.1.1 Reach, latency and capacity 1042
 25.1.2 The capacity challenge 1043
 25.2 Coherent transmission technology in undersea systems 1045
 25.2.1 Introduction to coherent detection 1046
 25.2.2 Linear impairment compensation with
 coherent detection 1050
 25.2.3 Nonlinearity accumulation in dispersion
 uncompensated transmission 1056
 25.3 Increasing spectral efficiency by bandwidth constraint 1058
 25.3.1 Inter-symbol interference compensation by linear
 filters 1058
 25.3.2 Multi-symbol detection 1060
 25.4 Nyquist carrier spacing 1063
 25.4.1 Spectral shaping for single channel modulation
 formats 1064
 25.4.2 Orthogonal frequency division multiplexing
 (OFDM) 1065
 25.4.3 Super-channels 1067
 25.5 Increasing spectral efficiency by increasing the
 constellation size 1068
 25.5.1 Higher order modulation formats 1068
 25.5.2 Receiver sensitivity 1070
 25.5.3 Coded modulation 1071
 25.6 Future trends 1072
 25.6.1 Nonlinearity compensation 1073
 25.6.2 Multi-core and multi-mode fiber 1073
 25.7 Summary 1074
 List of acronyms 1076
 References 1076
